Caution

Treat all chemical substances as if they have dangerous properties.

The publisher makes no representation, express or implied, with regard to the accuracy of the information contained in this Dictionary, and cannot accept any legal responsibility or liability for any errors or omissions that may be made.

The specific information in this publication on the hazardous and toxic properties of certain substances is included to alert the reader to possible dangers associated with the use of those compounds. The absence of such information should not however be taken as an indication of safety in use or misuse.

Note to Readers

Annual supplements keep *Dictionary of Inorganic Compounds* up to date

Supplements to *Dictionary of Inorganic Compounds* will be published each year subsequent to publication of the Main Work. The first annual supplement will be published in Autumn 1993.

Each supplement will contain about 1,700 new and revised entries derived from the primary literature of the preceding year. These supplements provide a complete updating service incorporating selected new data from all branches of inorganic chemistry.

Each supplement will have cumulative indexes covering the entries in all the supplements.

For full information on the *Dictionary of Inorganic Compounds* and its supplements please write to:

New Compounds for *Dictionary of Inorganic Compounds*

The Editor is always pleased to receive comments on the selection policy of the Dictionary, and in particular welcomes specific suggestions for compounds or groups of compounds to be considered for inclusion in the annual supplements.

Write to:

The Editor, *Dictionary of Inorganic Compounds*
Chapman & Hall

Preface

Inorganic compounds play a vitally important role as industrial feedstocks, fine chemicals and advanced materials, and in life processes. Their most outstanding feature is perhaps their great structural diversity. Whilst this diversity makes inorganic chemistry a rich and exciting branch of science, it also makes its documentation in a unified and consistent manner particularly challenging. The *Dictionary of Inorganic Compounds* has been designed to meet this challenge by presenting the essential information on the most important inorganic substances in a well organised manner. The Dictionary appears at a time when inorganic chemistry is enjoying a resurgence of interest, although as scientific research becomes more interdisciplinary, it may be undertaken within various departments.

The idea of a companion inorganic dictionary to the well known *Dictionary of Organic Compounds* is an obvious one, but the technical and editorial problems which have had to be overcome, in view of the greater structural and organisational diversity of the data, have been considerable. Thus the resulting dictionary represents the results of an intensive effort by a large team over some five years, as well as a great deal of technical development work by the Publishers.

The definition of inorganic chemistry used in this Dictionary is a wide one and encompasses not only molecular, coordination and non-molecular compounds, but also special materials such as bio-inorganics, superconductors, ceramics and minerals. The 22,000 entries included are those felt by the editorial team to be most representative of the elements concerned and those of interest to a wide range of scientists for their applications or potential applications. It is expected that the Dictionary will fulfil the role of an essential point of first access to the literature and that it should encourage browsing by the specialist and non-specialist alike. Annual supplements are planned to enhance the usefulness of the whole publication and to retain its topicality.

Some omissions and inaccuracies are inevitable in an undertaking of this size and we would appreciate their being pointed out to the Publisher so that they can be rectified.

Introduction

1. Using the Dictionary

The arrangement of entries is in order of empirical formula according to the Hill Convention (i.e. C, then H, then other elements in alphabetical sequence of element symbol). Where no carbon is present, the elements including H are ordered strictly alphabetically.

Every entry is numbered to assist ready location. The entry number consists of the prefix IC for Inorganic Compound followed by a six-digit number. In these main work volumes the first digit is always 0; entries in the supplements will have the supplement number as the first digit.

Volume 4 contains three indexes. The index of commonly occurring structural types lists non-molecular compounds of selected lattice types such as NaCl-type, CsCl-type, rutile-type, perovskite-type. The name index lists every compound name and synonym in alphabetical order. The CAS Registry Number Index lists all CAS numbers included in the Dictionary in serial order.

The fifth volume contains the element index which is divided into sections according to each element of the period table. Each section is ordered alphabetically by element symbol. Within each section are listed all compounds containing that element, in formula order. Thus sodium sulfate (Na_2SO_4) appears in three of the element index sections under sodium, sulfur and oxygen.

All indexes refer to the entry number. Each index is described in more detail at its beginning.

2. Compound selection policy

In compiling this Dictionary the aim has been to include:

(*i*) The elements

(*ii*) Binary and ternary compounds including hydrides, halides, oxides, sulfides, selenides, tellurides, nitrides, phosphides etc.

(*iii*) Important coordination compounds

(*iv*) Compounds with an established use such as catalysts, starting materials, synthetic reagents etc.

(*v*) Other compounds of particular chemical, physical, biological, structural or historical interest.

Some groups of compounds were originally included in previous Chapman & Hall chemical dictionaries, particularly the *Dictionary of Organometallic Compounds*. Of the two main groups, the metal carbonyl complexes will continue to feature in both Dictionaries. However, the cluster boranes and metallaboranes will in future be confined to the *Dictionary of Inorganic Compounds* even though they may contain metal–carbon bonds.

3. Organisation of entries

Some compounds which are not considered sufficiently important to justify entries of their own have been included as variants or derivatives in main entries. Derivatives typically include hydrates, solvates, donor-acceptor complexes (adducts generally) or one of the following special categories:

3.1 *Isotopically labelled compounds*

The Dictionary includes data on only the most important isotopic variants, generally limited to those of hydrogen. Deuterium (^2H) and tritium (^3H) are denoted separately in formulae as atoms D and T respectively and are alphabetically indexed as for other atoms. Data for deuterium oxide (D_2O), for example, will be found within the entry for water.

Information on the most important isotopes for each element is provided within the entry for that element.

3.2 *Dimeric and oligomeric substances*

Where a compound is known in several states of aggregation, these are all included in a single entry which usually refers to the monomer. The empirical formulae of all the oligomeric forms are given as well as all appropriate synonyms, and the compound can therefore readily be traced through indexes, whether looked for as the monomer or the oligomer.

Compounds which are known only in dimeric form under normal conditions are entered as such but the hypothetical monomers are included as derivatives to ensure that the names and formulae of the monomeric forms occur in the indexes.

3.3 *Anions and cations*

Entries for ionic substances containing complex ions generally refer to the naked complex cation or anion and the formula, formula weight and CAS Registry Number given for the entry are those of the ion, in agreement with current CAS practice. Salts of the ion with various counterions are then treated as derivatives and the empirical formulae of the more important ones are given.

If a specific salt is considered to be of particular importance it will be given an entry of its own, but there will be a cross-reference between the entry for the complex ion and the salt.

3.4 *Minerals*

Wherever possible, minerals corresponding to synthetic compounds are included within the entry for the synthetic compound, e.g. Zinc blende and Wurtzite are incorporated into the entry for Zinc sulfide (ZnS). Only when the mineral is the sole point of interest or unavailable synthetically is it given an entry in its own right.

4. Literature coverage

In compiling these volumes the primary literature has been surveyed to the beginning of 1991 and some important later citations have been incorporated.

The first annual supplement will appear in mid-1993 and will cover the literature to mid-1992.

5. Organisation of data within entries

Fig. 1 illustrates the format of a typical entry. The range of information included within the entries is described in detail below.

5.1 *Chemical names and synonyms*

The naming of inorganic compounds can be exceptionally difficult. In selecting the range of alternative names to present for each compound or derivative, we have been guided by the following principles:

(*i*) The function of the Dictionary is to report names which are found in the literature, including Chemical Abstracts, and not to attempt to impose a system of nomenclature. Therefore the editorial generation of new names has been kept to the minimum required by consistency. The majority of names given in the Dictionary are those given in the original paper(s) and in Chemical Abstracts.

(*ii*) For compounds of complex structure, especially metal cluster derivatives where nomenclature is still evolving, only the Chemical Abstracts name is reported. Frequently, the authors of papers reporting such compounds do not attempt to name them and most users of the Dictionary wishing to locate such compounds will probably do so via the empirical formulae.

(*iii*) There are many examples in the primary literature of the naming of inorganic compounds which is definitely incorrect according to IUPAC convention, especially in the non-alphabetical ordering of ligands in coordination compounds. Many of these incorrect forms are reported here.

(*iv*) Trivial variations in nomenclature which do not materially affect the alphabetical ordering of the name are not included. Such minor variations are legion, e.g.:

(α,β,γ,δ-Tetraphenylporphyrinato)
(5,10,15,20-Tetraphenylporphyrinato)

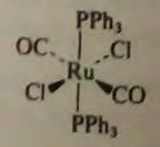
(*v*) The spellings used for the elements Al, Cs and S in this Dictionary are aluminium, caesium and sulfur respectively as recommended by IUPAC. (This is in contrast to the earlier *Dictionary of Organometallic Compounds* which used aluminum and cesium).

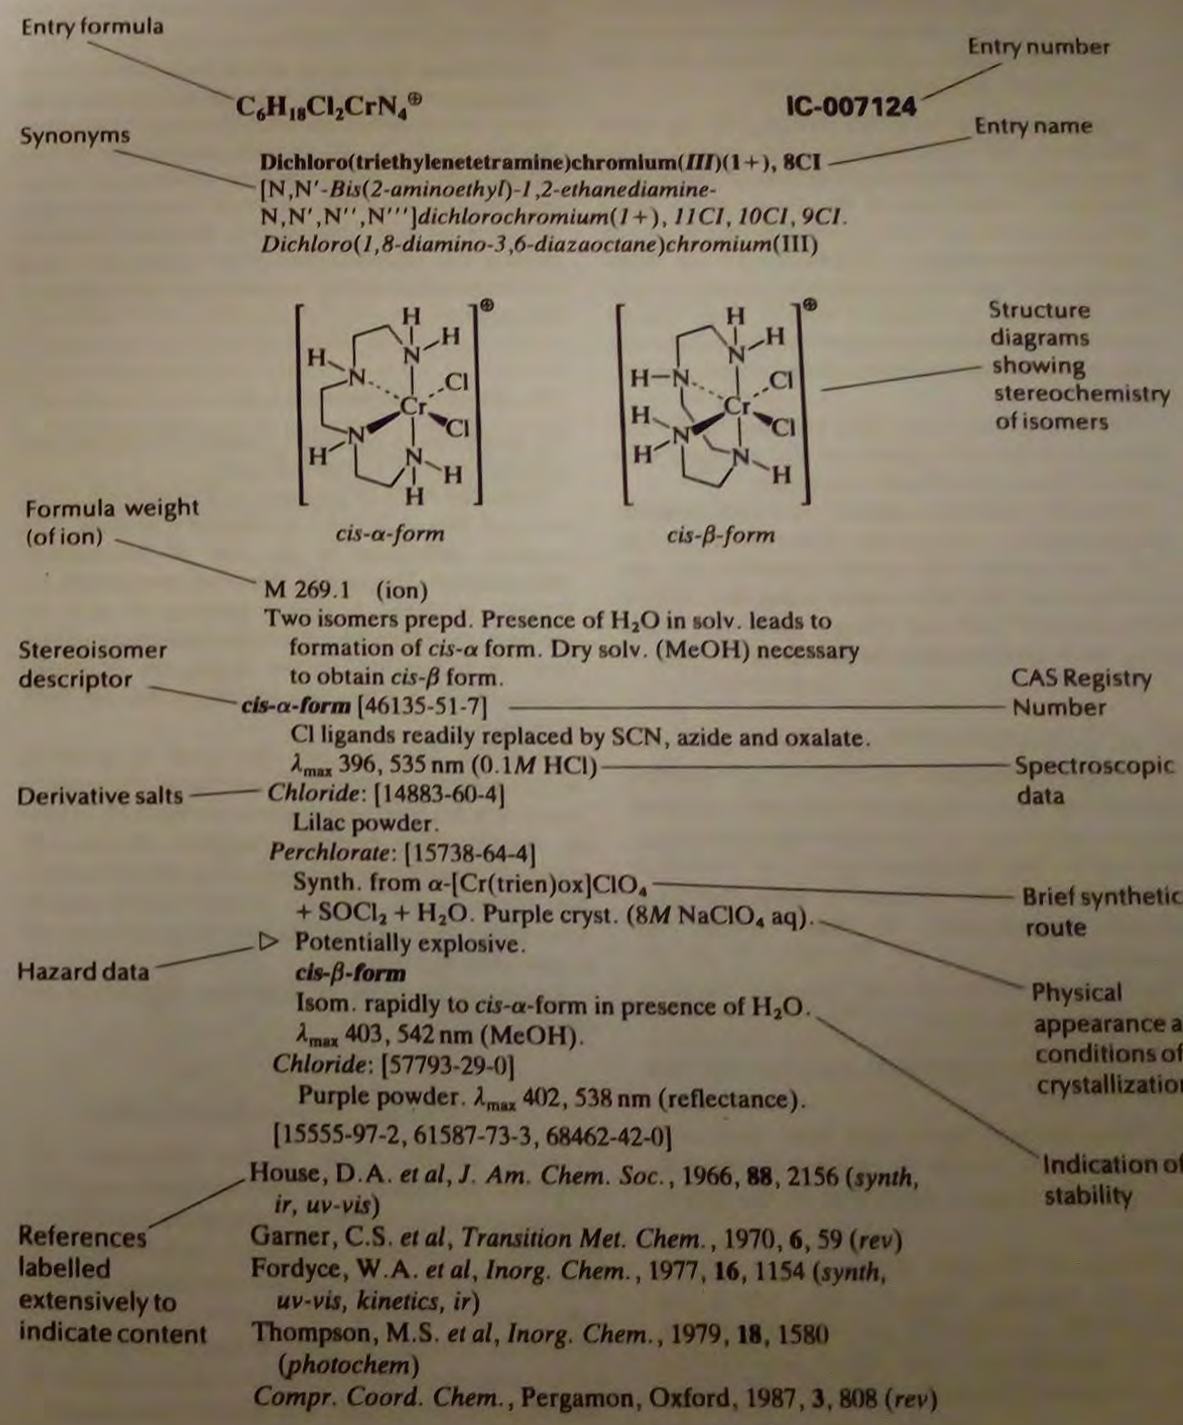
(*vi*) *Chemical Abstracts Service names*. Names corresponding to those used by CAS during the 8th, 9th, 10th and 11th collective index periods (1967–71, 1972–76, 1977–81, 1982–86 respectively) are labelled with the suffixes 8CI, 9CI, 10CI, and 11CI respectively. Names encountered in CA since 1986 are labelled 12CI although it is possible that some further changes may have occurred before publication of the twelfth collective index.

For the majority of inorganic compounds, the nomenclature brought in for the 9th Collective Index Period (and referred to as 9CI nomenclature) has since been unchanged. This is not true for some groups of compounds such as cluster boranes, where the nomenclature is still evolving. There are also many examples of the same compound being registered more than once under different names (and registry numbers) in CA.

The following suffixes which are to be found attached to CA names have been omitted:

(*a*) Stereochemical descriptors, for example, in Dicarbonyldichlorobis(triphenylphosphine)-ruthenium the CAS descriptor (OC-6-12) indicates the geometry shown below:





Entry formula
C6H18Cl2CrN4⊕
Entry number
IC-007124
Synonyms
Dichloro(triethylenetetramine)chromium(III)(1+), 8CI
Entry name
[N,N′-Bis(2-aminoethyl)-1,2-ethanediamine-N,N′,N″,N‴]dichlorochromium(1+), 11CI, 10CI, 9CI.
Dichloro(1,8-diamino-3,6-diazaoctane)chromium(III)

Fig. 1. A typical Dictionary entry

(*b*) Descriptors indicating metal-metal bonding, e.g. Hexa-μ-chlorohexachlorotriruthenate(4–) (*2Ru–Ru*). On the other hand, oxidation state has in many cases been inserted into CAS names, See Section (vii) below.

(*vii*) *Oxidation states and charges*. For any given substance, the oxidation state (also known as the Stock number) of the element of interest is incorporated into at least one of the names given, using Roman numerals or zero, provided that it can be unequivocally assigned. Oxidation states are therefore generally omitted from nitrosyl complexes where the assignment of oxidation state is often controversial, and also from compounds of elements having only one common oxidation state, where it is unnecessary.

The overall ionic charge (also known as the Ewens-Bassett number) of a complex is also provided in at least one name, using Arabic numerals.

Chemical Abstracts names do not describe oxidation states, only charges. However, where the CAS name is the only readily accessible one, the oxidation state has been added editorially. Where both oxidation state and charge occur in a single name, the former precedes the latter.

5.2 *CAS Registry Numbers*

CAS Registry Numbers are identifying numbers allocated to each distinctly definable chemical substance indexed by the Chemical Abstracts Service since 1957. The Numbers have no chemical significance but they provide a label for each substance independent of any system of nomenclature.

The following features of CAS Registry Numbers should, however, be noted:

(*i*) Hydrates, salts, complexes, etc. have their own registry numbers.

(*ii*) Stereoisomeric forms also have their own Registry Numbers, usually in addition to the non-specific Registry Number applicable to the generic substance.

(*iii*) Additional Registry Numbers may also be allocated to bonding isomers, etc., which are discussed in the literature but which have not been separately characterised (and which may not be capable of separate existence).

In this publication whilst every attempt has been made to achieve accuracy of the reported Registry Numbers, no guarantee can be provided as to the comprehensiveness of the range of numbers presented. Thus:

(*i*) The absence of a Registry Number for a particular substance does not necessarily imply that one has not been allocated.

(*ii*) Where the substance has been indexed more than once by CAS, one of the numbers (usually the lowest unless special considerations apply) is quoted for the main entry. All the others are listed at the foot of the entry in small typeface showing that other numbers are associated with the compound. Also included at this location are Registry Numbers dealing with stereoisomeric forms or hydrates which are not readily assigned to a more specific location in the entry.

5.3 *Empirical formulae*

As described in Section 1, empirical formulae are presented in Hill convention order.

Since the book is arranged in formula order, it is essential that each entry is assigned a formula. This presents difficulties in the case of incompletely characterised compounds. For such compounds the formula is shown in square brackets to alert the reader to its artificiality. Examples include complexes such as technetium citrate which are important commercially but whose composition has not been determined.

Artificial formulae are also used in grouping together series of closely related binary compounds where it is felt their organisation as a family is helpful to readers. For example, tungsten silicides are grouped together in this way. The specific names and formulae for different stoichiometries are all separately presented within the entry and may be accessed via the indexes.

Empirical formulae of important derivatives are provided.

5.4 *Formula weights (Relative Formula Mass)*

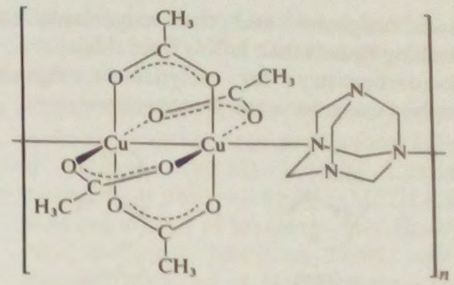
Formula weights given in the Dictionary are computer calculated from the formulae using the values for atomic weights published by the IUPAC Inorganic Chemistry Division, Commission on Atomic Weights and Isotopic Abundances; *Pure Appl. Chem.*, 1991, **63**, 975.

Formula weights are given to one decimal place, but is it important to note that *the atomic weights of some elements are variable within wider limits than this implies*. This applies not only to radioactive or radiogenic elements such as U and Pb but also to some non-radioactive elements, especially Li and B which exhibit a wider variation in commercially available samples.

5.5 *Structural representations*

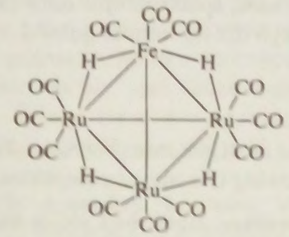
In preparing this Dictionary, care has been taken to achieve as much consistency and clarity in the presentation of structural formulae as possible. The primary aim has been to indicate the connectivity and, where known, the stereochemistry.

The diagrams are necessarily stylized and are intended to convey the correct topochemistry rather than to convey accurate representations of bond lengths and angles.

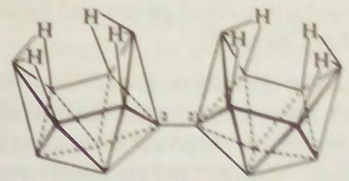


Bonding. The bonding in many transition metal complexes and clusters is more or less complex and subject to varying interpretation, and is therefore not amenable to accurate depiction by the conventions which serve reasonably well for organic compounds.

Bridging hydrogens between two metal centres are depicted for clarity as though there are full metal–metal bonds though there is rarely so much electron density between the two metals, e.g.:



Boranes. BH groups in the cluster boranes and related species are represented by vertices, as shown below:



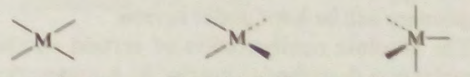
Only when B is bonded to 2 (or more) non-bridging atoms is it depicted explicitly. All other atoms, including carbon, are depicted explicitly.

This convention is analogous to the representation of CH_2 or CH groups as plain vertices in organic compounds and which is also used to depict ligands in this dictionary.

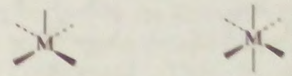
Polymeric transition metal complexes. Wherever possible the coordination polyhedron of the metal is depicted, and the points of attachment to the next unit are indicated using bonds that extend outside square brackets, e.g.

5.6 *Stereochemical conventions*

The various coordination polyhedra are depicted using wedged and dashed bonds, the most common polyhedra being:



Square planar — Tetrahedral — Trigonal bipyramidal



Square pyramidal — Octahedral

The shapes of polyhedra greater than 6 are not amenable to clear representation by this means and a textual statement such as 'square antiprismatic' is combined with the diagram.

The terms 'tetrahedral' and 'octahedral' are used in a general sense and do not imply strict symmetry types. For the latter, the point group descriptors T_d and O_h are employed.

Octahedral complexes. In the case of complexes bearing two different types of substituent the stereochemistry is adequately defined using the terms *cis*, *trans*, *fac* or *mer*:

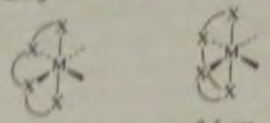
cis — *trans* — *fac* — *mer*

In more complicated cases, italicised letters are used to designate the positions of ligands in various configurations. The letters are assigned thus:

The first mentioned alphabetical ligand in the name is given the designator *a*, the second ligand the next

lowest designator and the assignments to the remaining ligands then follow from this.

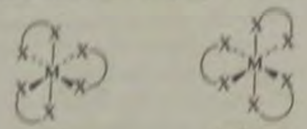
Stereochemistry for polydentate ligands is described using the α and β convention:



α-form *β-form*

During the compilation of this Dictionary, IUPAC adopted the *Configuration Index* notation based on Cahn-Ingold-Prelog (CIP) rules which is also to be found in Chemical Abstracts. An example is given in 5.1 (vi). Possible incorporation of such descriptors into supplements and future editions of this Dictionary will be kept under review.

The absolute configuration of certain octahedral complexes is described using the Δ, Λ convention,



Λ-form *Δ-form*

5.7 *Importance/use*

Information on the use of an inorganic compound is given when it has an established laboratory or industrial use or where it has been shown to undergo or catalyse reactions of potential usefulness.

5.8 *Physical data*

(*i*) **Interatomic dimensions.** Selected dimensions, usually obtained by x-ray crystallography, are provided: bond lengths are given in picometres ($pm = 10^{-12}m = 10^{-2}Å$), and angles in degrees.

(*ii*) **Melting points.** Melting points are recorded in degrees Celsius (°C). The policy followed in the case of conflicting data is as follows:

(*a*) Where the literature melting points are closely similar, only one figure (the highest or most probable) is quoted.

(*b*) Where two or more melting points are recorded and differ by several degrees (the most likely explanation being that one sample was impure) the lower figure is given in parentheses, thus: Mp 139° (132–133°).

(*c*) Where quoted figures differ widely and some other explanation such as polymorphism or incorrect identity seems the most likely explanation, both figures are quoted, thus: Mp 142°, Mp 205–206°.

(*d*) Known cases of polymorphism or double melting point are noted.

(*iii*) **Boiling points.** These are recorded in degrees Celsius at ambient pressure unless indicated by a subscript representing the pressure in mmHg of the measurement, e.g. Bp_{20} 130°.

(*iv*) **Sublimation temperatures.** These are recorded in a similar style to boiling points, e.g. $Subl_{20}$ 130°.

(*v*) **Thermodynamic data.** Limited thermodynamic data are provided; in other cases these can be located through the references quoted.

(*vi*) **Spectroscopic data.** Spectroscopic data such as ir maxima and uv wavelengths and extinction coefficients are given in many cases where spectroscopic identification has been important in characteristisation, particularly for unstable compounds. In many other cases, spectroscopic data can be rapidly located through the references quoted.

5.9 *Units*

Units have, in most instances been standardised to SI, with the following two major exceptions.

(*i*) **Temperature.** Both the Celsius and the Kelvin scales are used, depending on the quantity being measured. Temperatures at which magnetic data have been recorded (typically magnetic moments) and low temperatures generally are quoted in Kelvin (K) following observed practice. All other temperatures, particularly melting points and boiling points, are quoted in Celsius (°).

(*ii*) **Pressure.** Pressures lower than 1 standard atmosphere are quoted in millimetres of mercury (mmHg, which is equivalent to torr). Higher pressures are quoted in standard atmospheres (1 atm. = 1.01325 bar = 101325 Pa).

5.10 *Toxicity and Hazard Information*

(*i*) **General.** Toxicity and hazard information is highlighted by the sign ▷ (which also appears in the indexes.

The field of safety testing is a complex, difficult and rapidly expanding one, and while as much care as possible has been taken to ensure the accuracy of reported data, the dictionary must not be considered a comprehensive source on hazard data. The function of the reported hazard data is to alert the user to possible hazards associated with the use of a

particular compound, but the absence of such data cannot be taken as an indication of safety in use, and the publishers cannot be held responsible for any inaccuracies in the reported information.

Many inorganic compounds have not been evaluated toxicologically but it is to be assumed that all compounds of certain elements such as As, Be, Hg and Tl are toxic, and that compounds containing certain groups such as perchlorate and azide are likely to be explosive.

The handling of many air-sensitive inorganic compounds is to be regarded as potentially hazardous because of the risk of fire or explosion in contact with air. Not every such compound has been specially marked as hazardous.

(*ii*) **Measures of toxicity.** Threshold limit values (TLV's) are a standard measure of the maximum permittable exposure without ill effects. They are issued annually by the American Conference of Governmental Industrial Hygienists (ACGIH), 6500 Glenway Avenue, Cincinnati, Ohio 45211, USA. Alternatively, Occupational Exposure Standards (OES's) for general reference to concentrations of toxic substances in air, and issued annually by the Health and Safety Executive, London, may be quoted, either in ppm (v/v) or mg m^{-3}.

(*iii*) **RTECS Accession Numbers.** Many entries contain one or more RTECS Accession Numbers. Possession of these numbers allows users to locate toxicity information on relevant substances from the NIOSH Registry of Toxic Effects of Chemical Substances.

The Registry is a compendium of toxicity data extracted from the scientific literature and each substance is identified by a unique nine-character alphanumeric RTECS Accession Number.

For each RTECS Accession Number the RTECS database provides the following data when available: substance name and synonyms; update date; CAS Registry Number; molecular weight and formula; reproductive, tumorigenic, and toxic dose data; and citations to aquatic toxicity ratings, IARC reviews, ACGIH Threshold Limit Values, toxicological reviews, existing Federal standards, the NIOSH criteria document program for recommended standards, the NIOSH current intelligence program, the NCI Carcinogenesis Testing Program, and the EPA Toxic Substances Control Act inventory.

RTECS is available in the following forms:

(*a*) Printed version (new edition annually) available from: Superintendent of Documents, U.S. Government Printing Office, Washington DC 20402.

(*b*) Microfiche edition (published quarterly), also available from U.S. Government Printing Office.

(*c*) RTECS on-line data base (updated quarterly), available from two sources: National Library of Medicine (NLM) Medical Literature Analysis and Retrieval System (MEDLARS), National Library of Medicine, 8600 Rockville Pike, Bethesda, Maryland 20209, and the National Institutes of Health/Environmental Protection Agency Chemical Information System (CIS), 2135 Wisconsin Avenue, NW, Washington, DC 20007.

(*d*) RTECS computer tape (produced annually), available from: National Technical Information Service (NTIS), Port Royal Road, Springfield, VA 22161.

5.11 *Bibliographic References*

The selection of references is made with the aim of facilitating entry into the literature for the user who wishes to locate more detailed information about a particular compound. Thus in general, recent references are preferred to older ones. The number of references quoted cannot be taken as an indication of the relative importance of a compound.

The contents of many references are indicated by means of abbreviated suffixes, of which the following are the most important:

(abs config)	absolute configuration
(anal)	analysis
(bibl)	bibliography
(biochem)	biochemistry
(biodistrbn)	biodistribution
(cd)	circular dichroism
(chromatog)	chromatography
(cmr)	carbon (^{13}C) nuclear magnetic resonance spectrum
(conformn)	conformation
(cryst struct)	x-ray crystal structure determination
(deriv)	reference referring to a derivative
(dsc)	differential scanning calorimetry
(ed)	electron diffraction
(electrochem)	electrochemistry
(em)	electron microscopy
(esr)	electron spin (paramagnetic) resonance spectrum
(formn)	formation
(glc)	gas–liquid chromatography
(haz)	hazard
(hplc)	high performance liquid chromatography

(ir)	infrared spectrum
(isom)	isomerism, isomerisation
(manuf)	manufacture
(mcd)	magnetic circular dichroism
(mineral)	mineralogy
(mord)	magnetic optical rotatory dispersion
(ms)	mass spectrum
(nd)	neutron diffraction
(nmr)	nuclear magnetic resonance spectrum
(nqr)	nuclear quadrupole resonance spectrum
(occur)	occurrence (minerals)
(ord)	optical rotary dispersion
(pe)	photoelectron spectrum (including x-ray photoelectron spectrum)
(pharmacol)	pharmacology
(photol)	photolysis
(pmr)	proton (^{1}H) nuclear magnetic resonance spectrum
(polarog)	polarography
(props)	properties (chemical or physical)
(purif)	purification
(rel compd(s))	related compounds
(resoln)	resolution
(rev)	review
(soly)	solubility
(struct)	structure
(synth)	synthesis
(tga)	thermogravimetric analysis
(thermol)	thermolysis
(thermodyn)	thermodynamic data
(tox)	toxicity
(trans)	transition(s)
(use(s))	use(s), application(s)
(uv-vis)	ultraviolet-visible spectrum

5.12 *Journal abbreviations*

In general these follow the practice of the *Chemical Abstracts Service Source Index* (CASSI) with one or two exceptions such as *Chemical Communications* published by the Royal Society of Chemistry. This changed its name from *Chem. Commun.* to *J. Chem. Soc. D* in 1970, then again to *J. Chem. Soc. Chem. Commun.* in 1972. For consistency the latter form has been used throughout.

In patent references, no distinction is made between patent applications and granted patents.

5.13 *Abbreviations*

[α]	specific rotation
abs. config.	absolute configuration
Ac	acetyl
acac	acetylacetonato
AcOH	acetic acid
alk.	alkaline
amorph.	amorphous
anal.	analytical applications, analysis or detection
anhyd.	anhydrous
approx.	approximately
aq.	aqueous
asym.	asymmetrical, unsymmetrical
B.	base
bibl.	bibliography
biosynth.	biosynthesis
bipy	2,2′-bipyridine
Bp	boiling point
c.	concentration
cmr	^{13}C nuclear magnetic resonance spectrum
ca.	(circa) about
c.d.	circular dichroism
chromatog.	chromatography
col.	colour, coloration
comly.	commercially
compd.	compound
conc.	concentrated, concentration
config.	configuration
constit.	constituent
coord.	coordination, coordinated
d.	density
dec.	decomposes, decomposition
deg.	degree
deriv(s).	derivative(s)
descr.	described
detn.	detection, determination
diars	diarsine (generalized ligand)
dil.	dilute, dilution
dimorph.	dimorphic
diphos	diphosphine (generalized ligand)
diss.	dissolves, dissolved
dist.	distil, distillation
DMA	dimethylacetamide
DMF	dimethylformamide
dmpe	1,2-bis(dimethylphosphino)ethane
dmpm	bis(dimethylphosphino)methane
dppe	1,2-bis(diphenylphosphino)ethane
dppm	bis(diphenylphosphino)methane
edta	ethylenediaminetetraacetato
E_g	band gap (electron volts)
en	ethylenediamine
equilib.	equilibrium
esp.	especially
esr	electron spin resonance spectrum
Et	ethyl
EtOAc	ethyl acetate
evapn.	evaporation

exp.	exposure, experimental
fl. p.	flash point
fluor.	fluoresces, fluorescence
formn.	formation
Fp	freezing point
ΔG_f°	standard free energy of formation
glc	gas liquid chromatography
haz.	hazard
ΔH_f°	standard enthalpy of formation
hplc	high performance liquid chromatography
hydrol.	hydrolyses, hydrolysed, hydrolysis
insol.	insoluble
ir.	infrared spectrum
isol.	isolated
J	Joules (energy)
K	Kelvin (temperature)
L	ligand
LD	lethal dose: LD50, a dose which is lethal to 50% of the animals tested
lit.	literature
M	metal
M	molar
manuf.	manufacture, manufactured
max.	maximum
Me	methyl
misc.	miscible
mixt.	mixture
mod.	moderately
mol.	mole(s)
Mp	melting point
ms	mass spectrum
n	index of refraction e.g. (n_D^{20} for 20° and sodium light)
nmr	nuclear magnetic resonance spectrum
nqr	nuclear quadrupole resonance spectrum
obt.	obtained
O_h	octahedral
oep	octaethylporphyrinato
OES	occupational exposure standard
ord.	optical rotatory dispersion
ox	oxalato
oxidn.	oxidation
pet. ether	petroleum ether (light petroleum)
Ph	phenyl (C_6H_5)
pharmacol.	pharmacology
phen	1,10-phenanthroline
pm	picometres (10^{-12} metre)
pmr	proton magnetic resonance spectrum
polarog.	polarography
porph	porphyrinato (generalized ligand)
pptd.	precipitated
prob.	probably
props.	properties
purifn.	purification
Py	pyridine
redn.	reduction
ref.	reference
resoln.	resolution
rev.	review
r.t.	room temperature
S°	standard entropy
sepn.	separation
sl.	slightly
sol.	soluble
soln.	solution
solv.	solvent
spar.	sparingly
struct.	structure
subl.	sublimation
synth.	synthesis
tautom.	tautomerism
THF	tetrahydrofuran
tbp	trigonal bipyramidal
T_d	tetrahedral
temp.	temperature
tlc	thin layer chromatography
tox.	toxicity
TLV	Threshold Limit Value
tpp	5,10,15,20-tetraphenylporphyrinato
μ_{eff}	effective magnetic moment (in Bohr magnetons μ_B)
unsatd.	unsaturated
uv	ultraviolet spectrum
v.	very
var.	variety
vis.	visible
vol.	volume
X	anion (usually halide)

6. Sources of further information

The following books and review series provide more information about various aspects of inorganic chemistry.

Ac–C10

Ac IC-000001

Actinium

[7440-34-8]

Ac

M 227.0

Atomic No. 89. Ground state electron config. [Rn]$6d^17s^2$. 24 Isotopes reported: 2 occur naturally, of which ^{227}Ac is the most important ($t_{\frac{1}{2}}$ 21.8 years). Atomic radius 188 pm. Chemistry v. similar to that of La. Fcc struct. ^{227}Ac prepd. by neutron bombardment of ^{226}Ra. Metal obt. from AcF_3 or Ac_2O_3 + Li in Mo crucible at 1100-1300°, or from $AcCl_3$ + K. ^{227}Ac considered as a heat source in thermoelectric generators (for interplanetary flight). Soft silvery white metal, sometimes with golden caste, which glows in the dark. Oxidised rapidly (→ Ac_2O_3) in moist air. Reacts with H_2O (→ H_2). Mp *ca.* 1050° (1430°). Bp *ca.* 3200° (est.). ^{227}Ac is a member of the ^{235}U (AcU) decay series.

▷ ^{225}Ac is an α-emitter. ^{227}Ac is a weak β-emitter.

AcBrO IC-000002

Actinium(*III*) bromide oxide (AcBrO)

Actinium(III) *oxybromide*

[49848-33-1]

AcOBr

M 322.9

Possesses the PbClF or BiOCl struct. with 8-coord. Ac. White solid.

Zachariasen, W.H., *Acta Crystallogr.*, 1949, **2**, 388 (*struct*)
Fried, S. *et al*, *J. Am. Chem. Soc.*, 1950, **72**, 771 (*synth*)
Moskvin, A.I., *Radiokhimiya*, 1973, **15**, 353, 362; *CA*, **79**, 97595, 97596.

$AcBr_3$ IC-000003

Actinium(*III*) bromide ($AcBr_3$)

Actinium tribromide

[33689-81-5]

$AcBr_3$

M 466.7

Possesses the UCl_3 struct. Synth. from Ac_2O_3 + $AlBr_3$ (750°). White solid. Sol. H_2O. Subl. 800°. ΔH_f° −843 kJ mol^{-1}.

Zachariasen, W.H., *Acta Crystallogr.*, 1948, **1**, 265 (*cryst struct*)
Fried, S. *et al*, *J. Am. Chem. Soc.*, 1950, **72**, 771 (*synth*)
Finogenov, A.D., *Zh. Fiz. Khim.*, 1971, **45**, 1586; *Russ. J. Phys. Chem.* (*Engl. Transl.*), 1971, **45**, 900.
Brauer, G., *Handbuch Präp. Anorg. Chem.*, 3rd Ed., Ferdinand Enke Verlag, 1975-1981, **2**, 1126 (*synth*)
Bratsch, S.G. *et al*, *J. Phys. Chem.*, 1986, **90**, 207.

AcClO IC-000004

Actinium(*III*) chloride oxide (AcClO)

Actinium(III) *oxychloride*

[49848-29-5]

AcOCl

M 278.4

Possesses the PClF or BiOCl struct. with 8-coord. Ac. White solid.

Zachariasen, W.H., *Acta Crystallogr.*, 1949, **2**, 288 (*struct*)
Fried, S. *et al*, *J. Am. Chem. Soc.*, 1950, **72**, 771 (*synth*)

$AcCl_3$ IC-000005

Actinium(*III*) chloride ($AcCl_3$)

Actinium trichloride

[22986-54-5]

$AcCl_3$

M 333.3

Possesses the UCl_3 struct. Synth. from $Ac(OH)_3$ + CCl_4 (500°). White solid. Sol. H_2O. Subl. 960°. ΔH_f° −1011 kJ mol^{-1}.

[27388-90-5]

Zachariasen, W.H., *Acta Crystallogr.*, 1948, **1**, 265 (*cryst struct*)
Fried, S. *et al*, *J. Am. Chem. Soc.*, 1950, **72**, 771 (*synth*)
Merinis, J. *et al*, *Radiochem. Radioanal. Lett.*, 1970, **3**, 255.

Brauer, G., *Handbuch Präp. Anorg. Chem.*, 3rd Ed., Ferdinand Enke Verlag, 1975-1981, **2**, 1125 (*synth*)
Bratsch, S.G. *et al*, *J. Phys. Chem.*, 1986, **90**, 307.

AcFO IC-000006

Actinium(*III*) fluoride oxide (AcFO)

Actinium(III) *oxyfluoride*

[49848-24-0]

AcOF

M 262.0

Possesses the fluorite struct. White solid.

Zachariasen, W.H., *Acta Crystallogr.*, 1949, **2**, 388 (*struct*)
Fried, S. *et al*, *J. Am. Chem. Soc.*, 1950, **72**, 771 (*synth*)

AcF_3 IC-000007

Actinium(*III*) fluoride (AcF_3)

Actinium trifluoride

[33689-80-4]

AcF_3

M 284.0

Possesses the LaF_3 struct. Synth. from $Ac(OH)_3$ + HF. White solid. Insol. H_2O. ΔH_f° −1624 kJ mol^{-1}.

Zachariasen, W.H., *Acta Crystallogr.*, 1949, **2**, 388 (*cryst struct*)
Fried, S. *et al*, *J. Am. Chem. Soc.*, 1950, **72**, 771 (*synth*)
Finogenov, A.D., *Zh. Fiz. Khim.*, 1971, **45**, 1586; *Russ. J. Phys. Chem.* (*Engl. Transl.*), 1971, **45**, 900.
Brauer, G., *Handbuch Präp. Anorg. Chem.*, 3rd Ed., Ferdinand Enke Verlag, 1975-1981, **2**, 1124 (*synth*)
Bratsch, S.G. *et al*, *J. Phys. Chem.*, 1986, **90**, 307.

AcH_3O_3 IC-000008

Actinium(*III*) hydroxide ($Ac(OH)_3$)

Actinium trihydroxide

$Ac(OH)_3$

M 278.0

White solid. Insol. H_2O (3.6×10^{-6} g 100 cm^{-3}). Soly. altered on ageing.

Fried, S. *et al*, *J. Am. Chem. Soc.*, 1950, **72**, 771 (*synth*)
Zin, D.M. *et al*, *Soc. Radiochem. (Engl. Transl.)*, 1965, **7**, 176 (*synth*)

AcI_3 IC-000009

Actinium(*III*) iodide (AcI_3)

Actinium triiodide

[35089-82-6]

AcI_3

M 607.7

White solid. Sol. H_2O. Subl. 700-800°. ΔH_f° −2533 kJ mol^{-1}.

Fried, S. *et al*, *J. Am. Chem. Soc.*, 1950, **72**, 771 (*synth*)
Finegenov, A.D. *et al*, *Zh. Fiz. Khim.*, 1971, **45**, 1586; *Russ. J. Phys. Chem. (Engl. Transl.)*, 1971, **45**, 900.
Bratsch, S.G. *et al*, *J. Phys. Chem.*, 1986, **90**, 207.

Ac_2O_3 IC-000010

Actinium(*III*) oxide (Ac_2O_3)

Diactinium trioxide. Actinium sesquioxide

[12002-61-8]

Ac_2O_3

M 502.0

Has rare-earth sesquioxide A-struct. Formed when metal oxidised and when the oxalate is heated. White solid. Insol. H_2O. Can be reduced to Ac.

[74238-81-6]

Fried, S. *et al*, *J. Am. Chem. Soc.*, 1950, **72**, 771 (*synth, struct*)

Ac_2S_3 IC-000011

Actinium(*III*) sulfide (Ac_2S_3)

[50647-18-2]

Ac_2S_3

M 550.2

Isostructural with Ce_2S_3. Synth. from Ac_2O_3 + H_2S. Dark cubic cryst.

Fried, S. *et al*, *J. Am. Chem. Soc.*, 1950, **72**, 771 (*synth, struct*)

Ag IC-000012

Silver

Argentum (L.)

[7440-22-4]

Ag

M 107.8

Atomic No. 47. Ground state electron config. $[Kr]4d^{10}5s^1$. 27 Isotopes are known of which ^{107}Ag and ^{109}Ag are natural. Abundance: 0.08 ppm (earth's crust), 3×10^{-4} ppm (sea water). No biological role. Fcc struct. (Al type). Known to ancient civilizations. Occurs as natural metal, and as argentite (Ag_2S). Prod. as by-product from manuf. of non-ferrous metals, e.g. Cu, Pb, Zn. Excellent electrical and thermal conductor. Important compds. used in photography; used also in jewellery, electrical cells. Industrial catalyst. Soft malleable, ductile metal with silver sheen. Tarnishes in air with formation of black sulfide. Phys. props. dependent on mechanical treatment. Attacked by Cl_2, S, H_2S, metal cyanides (in air), chromic, nitric and sulfuric acids. Mp 961°. Bp 2163° (2155°). d^{25} 10.50 g cm^{-3}. Stable to O_2, and to H_2O, but attacked by S and its compds. and by $Cl^\ominus$. Sol. H_2SO_4, (hot, conc.) and HNO_3 (dil.). Sol. aq. $CN^\ominus$ solns. (+ H_2O_2).

▷ Toxic to lower organisms, but not mammals. Dust may be pyrophoric. VW3500000.

$AgAuTe_4$ IC-000016

Gold silver telluride ($AuAgTe_4$)

[102430-10-4]

$AuAgTe_4$

M 815.2

Cryst. with metallic lustre, electrically conducting. Brittle.

Mineral-form

Sylvanite

Widespread occurrence in low to high temp. vein deposits commonly associated with other minerals. Silver-white monoclinic cryst. sometimes with yellowish tint. Very similar structurally to $(Au,Ag)Te_2$ calavarite and krennerite.

Tunnell, G. *et al*, *Acta Crystallogr.*, 1952, **5**, 375 (*cryst struct*)

Merck Index, 11th Ed., 1989, No. 8455.

$AgClO_3$ — IC-000024

Silver(*I*) chlorate(*V*) ($AgClO_3$)
Argentous chlorate
[7783-92-8]

$AgClO_3$

M 191.3
Oxidising agent for some organic syntheses. White, tetragonal cryst. Darkens upon exp. to light due to slow dec. Spar. sol. H_2O; sl. sol. alcohols. Mp 230°. Dec. at 270° forming silver chloride and oxygen.

Hendrixson, W.S., *J. Am. Chem. Soc.*, 1903, **25**, 637 (*synth*)
Braun, G., *J. Am. Chem. Soc.*, 1929, **51**, 228 (*use*)

Inorg. Synth., 1946, **2**, 4 (*synth, props*)
Merck Index, 11th Ed., 1989, No. 8454.

$AgClO_4$ — IC-000025

Silver(*I*) perchlorate ($AgClO_4$)
[7783-93-9]

$AgClO_4$

M 207.3
Struct. unique for perchlorates of monovalent cations: tetragonal with 4+4 coordination at silver. Ag—O 250.4, 277.9 pm. Used in the explosives industry. Commercially available. Deliquescent cryst. Freely sol. H_2O; sol. C_6H_6, Py, toluene. Dec. at 486°.

▷ Irritating to skin, mucous membranes. Forms many explosive solvates.

[AgCu] — IC-000027

Copper-gold system
Gold copper

Copper gold (1:1) [12006-51-8]
AuCu M 260.5
Has fcc superstruct. of the Cu type below 380° with layers of Cu and Au. Disordered above 420°.

Copper gold (3:1) [12006-52-9]
Au_3Cu M 654.4
High temp. struct. is fcc with disorder between Cu and Au. Low temp. struct. is similar but with ordered Au and Cu.

Hansson, B. *et al*, *Acta Metall.*, 1964, **12**, 315 (*struct, CuAu*)

AgF — IC-000028

Silver(*I*) fluoride (AgF)
Argentous fluoride. Silver monofluoride
[7775-41-9]

AgF

M 126.8
NaCl struct. Converts organic Br and Cl compds. into their F analogues; antiseptic. Commercially available. V. hygroscopic leaflets. Darkens on exp. to light. Sol. H_2O, HF, NH_3, MeCN. Mp 435°. Bp 1150°. In moist air becomes insol. in H_2O due to the formation of the basic fluoride. Reduced to the subfluoride by uv light. ΔH_f° −203.7 kJ mol^{-1}.

Dihydrate: Stable to 39.5°.
Tetrahydrate: Stable from −14° to +18.7°.

Ott, H., *Z. Kristallogr.*, 1926, **63**, 222 (*cryst struct*)

AgF_2 — IC-000029

Silver(*II*) fluoride (AgF_2)
Argentic fluoride. Silver difluoride
[7783-95-1]

AgF_2

M 145.8
The only known binary Ag(*II*) compd. Struct. comprises distorted hcp fluoride with Ag(*II*) arranged on fcc sites. Commercially available. V. hygroscopic; white when pure. Usually obt. as a grey-black or brownish amorphous solid. Light sensitive.

▷ Highly toxic. Violent reaction with water. Powerful oxidising agent. VW4200000.

Ebert, M.S. *et al*, *J. Am. Chem. Soc.*, 1933, **55**, 3056 (*synth*)

AgF_3Zn — IC-000030

Silver zinc fluoride ($AgZnF_3$)
Silver trifluorozincate
[28667-89-2]

$AgZnF_3$

M 230.2
Perovskite struct. Cryst.

Porties, J. *et al*, *Compt. Rend. Hebd. Seances Acad. Sci. Sect. C*, 1970, **270**, 216 (*synth, struct*)
Beznosikov, B.V., *Sov. Phys. Crystallogr. (Engl. Transl.)*, 1978, **23**, 51 (*cryst struct*)

$AgF_4^{\ominus}$ — IC-000031

Tetrafluoroargentate(*III*)(1−)
[91899-67-1]

$[AgF_4]^{\ominus}$

M 183.8 (ion)
Square planar at Ag. Fluorinating agent.

Na salt: [31096-68-1].
AgF_4Na M 206.8
Yellow cryst.

K salt: [23739-18-6]. *Potassium tetrafluoroargentate ($KAgF_4$)*
AgF_4K M 222.9
Yellow cryst.

Hoppe, R., *Recl. Trav. Chim. Pays-Bas (J. R. Neth. Chem. Soc.)*, 1956, **75**, 569 (*synth, anal, magnetism*)

AgF_5OTe — IC-000032

|Pentafluorohydroxytellurato(1−)|silver
Silver teflate. Silver pentafluoroorthotellurate. Silver(1+) pentafluorooxotellurate, 9CI
[50700-88-4]

$AgOTeF_5$

M 346.4
The various solvates with aromatics and halocarbons contain coordinated solv. molecules and offer an entry into reactive solvated metal ion chemistry. Synth. from AgF + TeF_5OH in presence of required solv. Grey powder. Extremely sol. CH_2Cl_2, 1,2-dichloroethane (> 2.5*M*).

CH_2Cl_2 complex: [116909-86-5].
White powder; dec. slowly in light at r.t. Sol. CH_2Cl_2.

1,2-Dichloroethane complex: see *Bis(1,2-dichloroethane-Cl,Cl')bis[μ-[pentafluorohydroxytellurato(1−)-O:O]] disilver(I), IC-004049*

Bis-MeCN complex: [98330-70-2]. *Tetrakis(acetonitrile-N) bis[μ-[pentafluorohydroxytellurato(1−)-O:O]]disilver, 9CI*
Sticky white solid. Dimeric.

Bis-toluene complex: [98330-69-9].
White cryst. stable indefinitely in dark at −15°. Dimeric.

Mayer, E. *et al*, *Inorg. Chem.*, 1975, **14**, 589 (*synth, MeCN complex*)
Strauss, S.H. *et al*, *Inorg. Chem.*, 1985, **24**, 4307 (*complexes, synth, F-19 nmr, cryst struct*)
Colsman, M.R. *et al*, *J. Am. Chem. Soc.*, 1988, **110**, 6886 (*synth, CH_2Cl_2 complex*)

$AgF_6^{3\ominus}$ — IC-000033

Hexafluoroargentate(*III*)(3−)

$[AgF_6]^{3\ominus}$

M 221.8 (ion)
The first known Ag^{III} salt with 6-coordination.

K alt-(C) salt [74480-87-0]
AgO_2F_4K M 326.7
Obt. by direct fluorination of a 2:1 mixt. of CsCl, KCl, $AgNO_3$ at 300°. Unstable purple-red cryst. Struct. resembles K_2NaOrF_6, cubic.
Bojan, B. et al, Magnetochemistry, 1986, 83, 501 (comb. anal., magnetism, cryst. struct.)
Allen, G.C. et al, Inorg. Chem., 1988, 8, 1895 (ir-vis)

IC-000034

AgF_4^{-}
Hexafluoroargentate(III,IV)(2−)
$[AgF_4]^{\ominus}$ $[AgF_4]^{\ominus}$
M 227.8 (ion)
Mixed valence state Ag^{II}/Ag^{III} compd. with D_4 Ag.
Di-Cs salt: [82388-00-5]
$AgCs_2F_8$ M 487.6
Obt. by heating a 2:1 mixt. of CsF and AgF_2. Bright orange cryst. Dec. in air/water; loses fluorine at r.t. in vacuo. Made up of equal amts. of Ag^{III} and Ag^{I} in the cryst. lattice.
Serbe, P. et al, Compt. Rend. Hebd. Seances Acad. Sci. Sect. C, 1977, 284, 231 (synth, cryst struct, magnetism)
Serbe, P. et al, J. Fluorine Chem., 1978, 11, 243 (synth, cryst struct, magnetism)

IC-000035

AgF_6P
Silver(1+) hexafluorophosphate
[26042-63-7]
$Ag[PF_6]$
M 252.8
Prepd. from AgF + PF_5 in liq. SO_2. Commercially available. Yellow-brown solid. Sol. H_2O.
Woolf, A.A. et al, J. Chem. Soc., 1950, 1050 (synth)
Russell, D.R. et al, J. Chem. Soc., 1961, 4689 (synth)
Emeléus, R.D.W. et al, J. Chem. Soc., 1963, 4408 (cryst struct)

IC-000036

$AgFe_2S_3$
Iron silver sulfide (Fe_2AgS_3)
Argentopyrite
[12417-96-8]
$AgFe_2S_3$
M 315.7
Mineral. Grey to white with metallic lustre. Dimorphous with Sternbergite.
Murdoch, J. et al, Am. Mineral., 1954, 39, 475 (struct)
Sventsitskaya, O.L. et al, Nov. Dannye Miner., 1982, 30, 135; CA, 1983, 99, 41172s (struct, reflectance)

IC-000037

[AgGa]
Silver-gallium system
Gallium silver system
Alloy; main phase is Ag_3Ga.
Silver gallium (3:1) [57673-43-7]
Ag_3Ga M 393.3
Exists in γ-phase below 440° and β-phase above this temp. The β-phase has a disordered Mg-like struct. (hcp) and is sometimes designated ζ or γ, ξ'. Metallic.
Hume-Rothery, W. et al, J. Inst. Met., 1942, 68, 133 (struct)

IC-000039

$AgH_6N_2^{\oplus}$
Diamminesilver(1+), 11Cl, 10Cl, 9Cl, 8Cl
[16972-61-5]
$[H_3N{-}Ag{-}NH_3]^{\oplus}$
M 141.9 (ion)
Linear cation. Stain for DNA to detect aldehyde groups in deoxyribose function. Basis of Tollen's reagent used to test for the presence of aldehydes.
Perchlorate: [103809-62-7]. *Silver(I) perchlorate diammoniate*
White cryst.
▷ Potentially explosive.
Nitrate: [23606-32-8]. *Silver(I) nitrate diammoniate*
White cryst. Dec. in air with loss of NH_3 within a few hrs.
▷ VW3515000.

IC-000041

AgI
Silver(I) iodide (AgI)
[7783-96-2]
AgI
M 234.7

Possesses wurtzite struct. at r.t. which transforms to the fast silver ion conducting form at 147° which has bcc iodide. Another low temp. form has the sphalerite struct. NaCl struct. available only at elevated pressure. Used in cloud precipitation and as a local anti-infective. Commercially available. Light yellow odourless powder. Slowly darkens in light. Cryst. are hexagonal or cubic. Insol. H_2O, acids, ammonium carbonate; sol. aq. alkali cyanides and iodides. Mp 558°. Bp 1504°.

IC-000042

$AgIO_3$
Silver(*I*) iodate ($AgIO_3$)
Argentous iodate
[7783-97-3]
$AgIO_3$
M 282.7
IO_3 groups and AgO_6 octahedra form a compact 2-D framework. Isomorphous with $AgNO_3$ and $(NH_4)IO_3$. Reagent for determining small quantities of chloride. Commercially available. Light-sensitive white cryst. powder. Spar. sol. H_2O, HNO_3; mod. sol. 10% NH_3. ΔH_f° −95.8 kJ mol^{-1}. Dec. between 410-470°.

$AgNO_2$

IC-000050

Silver(*I*) nitrite ($AgNO_2$)
Argentous nitrite
[7783-99-5]

$AgNO_2$

M 153.8
Has orthorhombic struct. similar to $NaNO_2$. Used to prepare standard $NaNO_2$ soln. for water anal.; reagent for prepn. of aliphatic nitro-compds. Commercially available. Non-hygroscopic pale yellow needles. Mod. sol. boiling H_2O; insol. alcohols. Dec. at 140°. Dec. by dil. acids or by prolonged boiling in H_2O. ΔH_f° −24.86 kJ mol^{-1}, ΔG_f° 11.11 kJ mol^{-1}.

Hess, H., *Ann. Physik. Chem.*, 1828, **12**, 257 (*synth*)

$AgNO_3$

IC-000051

Silver nitrate ($AgNO_3$)
[7761-88-8]

$AgNO_3$

M 169.8
Phase transition between low temp. orthorhombic form and rhombohedral form takes place at 159°. Topical antiinfective agent. Used in photography; manuf. of mirrors; silver plating; colouring porcelain; v. important analytical reagent. Commercially available. Colourless, odourless, transparent, large cryst. or small white cryst. Not photosensitive when pure. Sol. H_2O, EtOH; mod. sol. Me_2CO; readily sol. aq. NH_3. Mp 212°. Presence of trace amounts of organic material promotes photoreduction. Dec. at 440° into metallic silver, nitrogen, oxygen and nitrogen oxides. ΔH_f° −123.6 kJ mol^{-1}, ΔG_f° −32.3 kJ mol^{-1}.

▷ Poisonous, caustic and irritant. VW4725000.

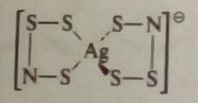
$AgN_2S_6^{\ominus}$

IC-000052

[Bis(dithioperoxy)thionitrito]argentate(1−), 11Cl



M 328.2 (ion)
Struct. analogous to [Bis(dithioperoxy)thionitrito] cuprate(1−), IC-017909.

Bis(triphenylphosphine)iminium(1+) salt: [81519-34-8]. Synth. from $AgNO_3$ and $(Ph_3P)_2N^{\oplus}S_3N^{\ominus}$ in MeCN. Orange cryst. Sol. MeCN.

Bojes, J. *et al*, *J. Chem. Soc., Chem. Commun.*, 1981, 1171 (*synth, uv-vis*)

AgO

IC-000053

Silver(*I,III*) oxide (AgO)
Argentic oxide. Silver peroxide. Silver suboxide. Dirasil
[1301-96-8]

$Ag^{I}Ag^{III}O_2$

M 123.8
Mixed oxidation state oxide with 4-coordinate Ag(*III*) and 2-coordinate (linear) Ag(*I*). Used in manuf. of silver oxide-zinc alkali batteries. Commercially available. Charcoal grey powder. Malleable. Insol. H_2O; sol. alkalis, $[NH_4]OH$ (with dec.). Dec. >100° into silver and oxygen; semiconductor; diamagnetic; strong oxidising agent.

▷ Avoid contact with skin, organic matter, strong ammonia and alkalis.

[AgZn]

Silver-zinc system
Zinc-silver system
Several phases known.

Silver zinc *(1:1)* [12041-17-7]
AgZn M 173.2
Metallic.
β-form: High temp. struct. A2 (W-type) struct. cubic close-packed.
β'-form: Medium temp. struct. CsCl-type struct.
ζ-form: Struct. obt. below 260°. Bb struct. type.

Silver zinc *(5:8)* [86703-30-8]
γ-Silver-zinc
Ag_5Zn_8 M 1062.4
γ-brass struct.

Silver zinc *(1:3)* [52037-01-1]
ε-Silver-zinc
$AgZn_3$ M 304.0
Has hcp struct. which resembles that of Mg.

[AgZr]

Zirconium-silver system
Silver-zirconium system
Alloy; two phases descr. here.

Zirconium silver *(2:1)* [37381-03-6]
$AgZr_2$ M 290.3
Has $MoSi_2$-type struct. Metallic.

Zirconium silver *(1:1)* [37381-02-5]
AgZr M 199.0
Has CuAu-type struct. Metallic.

IC-000064

Ag_2BaS_4Sn

Barium disilver thiostannate
Barium silver tin sulfide (BaAg₂SnS₄). Barium silver tetrathioxostannate, 9CI
[61036-11-1]

Ag_2BaSnS_4

M 600.0
Orthorhombic cryst.

Teske, C.L. *et al*, *Z. Anorg. Allg. Chem.*, 1976, **426**, 281 (*synth, cryst struct*)

IC-000065

Ag_2CrO_4

Silver(*I*) chromate(*VI*) (Ag_2CrO_4)
[7784-01-2]

Ag_2CrO_4

M 331.7
Struct. comprises an interlocking network where Ag ions are coordinated by chromate group oxygens. Tetragonal bipyramidal and distorted tetrahedral coordinations exist. Catalyst for formation of aldol from alcohol; formed at end point of Mohr titration of halides. Commercially available. Dark brownish-red cryst. powder. Spar. sol. H_2O. Sol. HNO_3, NH_3. Mp 665°. Diamagnetic.

IC-000066

Ag_2F

Silver fluoride (Ag_2F)
Silver subfluoride. Disilver fluoride
[1302-01-8]

Ag_2F

M 234.7
Struct. comprises successive layers of Ag, Ag and F with Ag—Ag 299.6 and 281.4 pm and Ag—F 245.1 pm.

Hexagonal, bronze-coloured cryst. with green lustre. Good electrical conductor. Turns greyish-black on prolonged exp. to air. ΔH_f° −211.7 kJ mol^{-1}. Thermal dec. to Ag and AgF begins at 100° and is complete by 200°. Instant hydrol. with H_2O to precipitate silver powder. Stable to EtOH and light.

IC-000067

Ag_2FeS_4Sn

Iron silver tin sulfide ($FeAg_2SnS_4$)
[12376-96-4]

Ag_2FeSnS_4

M 518.5
Mineral-form [37342-34-0]
Hocartite
Occurs assoc. with wurtzite and sphalerite. Brown-grey; granular.

Caye, R.C. *et al*, *Bull. Soc. Fr. Minéral. Cristallogr.*, 1968, **91**, 383 (*phys prop, struct*)

IC-000068

$Ag_2Ge_2O_5$

Germanium silver oxide ($Ag_2Ge_2O_5$)
Silver germanate
[12645-39-5]

$Ag_2Ge_2O_5$ or $Ag_2O.2GeO_2$

M 440.9
Typical formula of a series of silver germanate glasses. Synth. from Ag_2O and GeO_2 in Pt crucible at 1470°. Colourless, through light yellow to deep red glass depending on % Ag_2O.

Riebling, E.F., *J. Chem. Phys.*, 1971, **55**, 804, 3921 (*synth*)

IC-000069

Ag_2HgI_4

Silver(*I*) tetraiodomercurate(*II*) ($Ag_2(HgI_4)$)
Mercury silver iodide ($HgAg_2I_4$)
[7784-03-4]

$Ag_2(HgI_4)$

M 923.9
The r.t. β-form struct. is tetragonal with chalcopyrite type of cation ordering and considerable distortion of the anion cubic close packing. Transforms to α-form above 50°, in which the silver ions are highly mobile. Thermal sensor, becomes blood red at 40-50° and yellow again on cooling. Deep yellow thermochromic powder. Insol. H_2O, dil. acids; sol. solns. of alkali iodides or cyanides. Mp 652°. ΔH_f° −716.1 kJ mol^{-1}.

IC-000070

Ag_2MoO_4

Silver molybdate(*VI*) (Ag_2MoO_4)
Molybdenum silver oxide ($MoAg_2O_4$). Disilver molybdate
[13765-74-7]

Ag_2MoO_4

M 375.6
Contains the tetrahedral $[MoO_4]^{2\ominus}$ ion. Spinel type lattice. Synth. by combining aq. solns. of sodium or ammonium molybdate and a sol. silver salt or by fusing $AgNO_3$ and MoO_3 at 500-600°. White solid; yellow solid (after fusion), or cubic cryst. Readily melts to yellow liq. Insol. H_2O; sol. HNO_3. Mp 483°.

IC-000071

Ag_2O

Silver(*I*) oxide (Ag_2O)
Argentous oxide
[20667-12-3]

Ag_2O

M 231.7
Struct. consists of fcc arrangement of silver ions interpenetrated by a bcc arrangement of oxygen ions. Each oxygen tetrahedrally coordinated by silver. Isostructural with Cu_2O. Catalyst; used in the purif. of drinking water; in the glass industry (polishing, colouring glass yellow). Commercially available. Brownish-black, heavy, odourless powder. Light sensitive. Insol. alcohols. V. spar. sol. H_2O. Freely sol. dil. HNO_3, NH_3. Begins to dec. at 200° and at 250-300° dec. is rapid. When moist, absorbs CO_2. ΔH_f° −30.7 kJ mol^{-1}.

IC-000072

Ag_2O_2Pb

Lead silver oxide ($PbAg_2O_2$)
Silver plumbite
[12249-87-5]

Ag_2PbO_2

M 454.9
Predominantly covalent bonding. Pb is coordinated by 4 O (*cf* PbO). Yellow-brown or brown prismatic cryst. with metallic lustre, or olive-coloured powder. Insol. H_2O, aq. NH_3; sol. dil. HNO_3, conc. acid. On heating to ~140-150°, becomes grey-black. Dec. on melting.

IC-000079

Ag_2S
Silver(*I*) sulfide (Ag_2S)
Argentous sulfide
[21548-73-2]

Ag_2S

M 247.8
Monoclinic at r.t., transforming to bcc at 117° and to fcc at 593°. β-Ag_2S is an electronic as well as a cation-disordered fast ion conductor between 177° and 593°. Used in ceramics. Commercially available. Greyish-black, heavy powder. Insol. H_2O; sol. HNO_3, solns. of alkali cyanides. ΔH_f° −31.9 kJ mol^{-1}. Dec. with loss of sulfur >200°.

Mineral-form
Argentite
Occurs. e.g. in Western USA; major ore in Mexico; also found in some European countries. Commonly assoc. with Ag and galena. Lead-grey to blackish lead-grey opaque cryst.

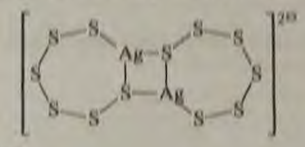
Bis[μ-(hexathio-S^1:S^1,S^6)]diargentate(2−), 11Cl
Bis(μ-hexasulfido-S,S:S')diargentate(1)(2−)



M 600.5 (ion)
Bis-Ph_4P salt: [94629-50-2].
Orange cryst.

Müller, A. *et al*, *Inorg. Chim. Acta*, 1984, **90**, L69 (*synth, cryst struct, raman*)

IC-000081

Ag_2Se
Silver(*I*) selenide (Ag_2Se)
Disilver selendide
[1302-09-6]

Ag_2Se

M 294.6
α-form has a bcc lattice of $Se^{2\ominus}$ with $Ag^{\oplus}$ randomly distributed in interstices. Transforms to β-form at 133°. Commercially available. Grey, hexagonal, microscopic needles. Insol. H_2O. Mp 880°. Diamagnetic. Forms metallic silver and selenium oxide when heated in oxygen. ΔH_f° −12.8 kJ mol^{-1}.

Mineral-form
Naumannite
Occurs in e.g. USA, Argentina, Germany assoc. with similar minerals. Greyish black opaque cubes; tarnishes→brown.

Ag_3AsS_3
Trisilver arsenotrithioite, 9CI
Silver trithioarsenite. Silver sulfoarsenite. Silver thioarsenite, 8CI. Silver arsenic sulfide (Ag_3AsS_3)
[15122-57-3]

Ag_3AsS_3

M 494.7
Consists of $(AsS_3)^{3\ominus}$ pyramids with each S attached to two $Ag^{\oplus}$ ions binding a given prism to its neighbours. At r.t. As—S 227.1 (mean), S—S 346, Ag—S 244.5 (mean) pm. Struct. retained down to transition at −244°. Below this temp. possesses monoclinic unit cell. Synth. from the elements. Used in acoustooptical devices for communication systems. Dark red solid. Mp 496°. Photoconductor and electric semiconductor possessing ferroelastic, piezoelectric props. Ferroelectric (Curie point −244°). Exhibits other phase transitions at −217 to −212°, and possibly −225°.

Mineral-form
Proustite. *Ruby silver. Light red silver ore*
Associated with Au and Ag ores. Found in Japan, Romania, Canada. Mp 484°.

Mineral-form [15122-59-5]
Xanthoconite. *Xanthokon. Xanthocone. Rittingerite*
Found in Czechoslovakia. Metastable.

IC-000085

Ag_3O_4P
Silver phosphate ($Ag_3(PO_4)$)
Trisilver(1+) phosphate, 9CI. Silver orthophosphate
[7784-09-0]

Ag_3PO_4

M 418.5
Low (ordinary) temp. form is cubic. The regular PO_4 tetrahedra form a bcc lattice. The six Ag ions are disordered among 12 sites. Synth. from Ag_2O + $NH_4H_2PO_4$ at 400°; $AgNO_3$ aq. + Na_2HPO_4 or $(NH_4)_2HPO_4$ aq. Commercially available. Yellow cubes (NH_3 aq.). Mp 1012° (980-990°). Suspensions photochemically release O from H_2O more efficiently than AgCl in phosphate buffer. At 520° (505°) undergoes transition to high temp. form with fcc cubic lattice. V. sensitive to light, becoming red.

Ag_3S_3Sb IC-000087
Antimony silver sulfide ($SbAg_3S_3$)
[15983-65-0]

Ag_3SbS_3

M 541.5
Synth. from Ag_2S + Sb_2S_3; or from AgCl + Sb_2S_3 at 300°, or Ag + Sb + S at <650°. Deep red solid or purplish-red cryst. with metallic lustre. Mp 473°. Photosensitive ferroelectric semiconductor. Exhibits high ir transparency. Exhibits a phase transition at −263°.
Mineral-form [15123-77-0]
Pyrargyrite. *Ruby silver. Dark red silver ore*
Associated with other Ag and Au ores in Japan and USSR. Also found in USA (Nevada) and Canada (Manitoba) as well as in East European countries. Of potential use in acoustooptical devices.

Dovgii, Ya.O. *et al*, *Kristallografiya*, 1971, **16**, 1043; *Sov. Phys. Crystallogr.* (*Engl. Transl.*), 1971, **16**, 912 (*ir*)

Ag_5IO_6 IC-000090
Silver periodate (Ag_5IO_6)
[15122-61-9]

Ag_5IO_6

M 762.2
Precipitated from solns. of $Ag^{\oplus}$ + periodate. Commercially available. Black cryst. Insol. H_2O.

Gyani, P.P., *J. Indian Chem. Soc.*, 1950, **27**, 5 (*synth*)
Souchay, P. *et al*, *Bull. Soc. Chim. Fr.*, 1953, 599 (*synth*)

$Ag_6O_7Si_2$ IC-000091
Silver silicate ($Ag_6(Si_2O_7)$)
Silver pyrosilicate
[65161-09-3]

$Ag_6[Si_2O_7]$

M 815.3
Cryst. Angle: SiOSi 137.9°.

Jansen, M., *Acta Crystallogr., Sect. B*, 1977, **33**, 3584 (*cryst struct*)
Friebel, C. *et al*, *Z. Naturforsch., B*, 1984, **39**, 739.

Ag_8GeS_6 IC-000092
Silver germanide sulfide (Ag_8GeS_6)
Germanium silver sulfide ($GeAg_8S_6$), 9CI
[12250-22-5]

Ag_8GeS_6

M 1127.9
Compd. in which the element germanium was discovered. Prepd. by addition of $Ag^{\oplus}$ to a soln. of GeS_2 in Na_2S. Cryst. Exists in a high-temp. cubic form (argyrodite) and a low-temp. orthorhombic form (synthetic argyrodite). Semiconductor. Mp 955°.
Mineral-form [12250-23-6]
Argyrodite
Found in Bolivia, Germany and Utah. Steel-grey with reddish tint, orthorhombic cryst. Rapidly tarnishes black with purple or bluish tint.

Schwarz, R. *et al*, *Ber., B*, 1929, **63**, 778 (*synth*)

Ag_8GeSe_6 IC-000093
Silver germanide selenide (Ag_8GeSe_6)
[12250-24-7]

Ag_8GeSe_6

M 1409.3
Rhombohedral pseudocubic single crystals. Anion lattice consists of 3-D connected polyhedra with coordination nos. 12 and 16. Isolated $GeSe_4$ tetrahedra have $Ag^{\oplus}$ distributed over a no. of sites with distorted tetrahedral, trigonal or linear coordination. Steel grey cryst.

Ollitrault-Fichet, R. *et al*, *J. Less-Common Met.*, 1985, **114**, 273.

Ag_8S_6Sn IC-000094
Silver tin sulfide (Ag_8SnS_6)
[12250-27-0]

Ag_8SnS_6

M 1174.0
Cryst. Mp 839°.
Mineral-form
Canfieldite
May also be formulated as $Ag_8(Sn,Ge)S_6$. Occurs as mineral at sites in S. America, Europe and Japan, associated with other silver minerals. Steel grey cubic cryst. with reddish tinge; rapidly tarnishes becoming black with purple or bluish tint.

Hahn, H. *et al*, *Naturwissenschaften*, 1965, **52**, 451.

$Ag_{10}O_{13}Si_4$ IC-000095
Silver silicate ($Ag_{10}(Si_4O_{13})$)
Silver oxide silicate ($Ag_{10}O(Si_4O_{12})$)
[70197-03-4]

$Ag_{10}[Si_4O_{13}]$

M 1399.0
Synthetic oligosilicate with unbranched four-fold tetrahedra. Vermilion powder or triclinic cryst.

Jansen, M. *et al*, *Angew. Chem., Int. Ed. Engl.*, 1979, **18**, 464 (*cryst struct*)

Al IC-000096
Aluminium
Aluminum, 9CI
[7429-90-5]

Al

M 26.9
Atomic No. 13. Ground state electron config. $[Ne]3s^23p^1$. 8 Isotopes reported of which only ^{27}Al is natural and stable. Discovered in 1825 by H.C. Oersted (Copenhagen) and first obt. electrolytically by C.M. Hall (1886). Abundance: 83,000 ppm (earth's crust), 0.01 ppm (sea water). Has fcc struct. Most abundant metallic element on surfaces of earth and moon. Common constit. of many igneous minerals incl. kaolin, bauxite, feldspars, micas, and occurs in many gemstones (ruby, sapphire, emerald). Metal obt. commercially from bauxite by purifn., dehydration and electrolysis of soln. in molten cryolite. (Hall-Héroult process) or by electrolysis of molten $AlCl_3$ (Alcoa process). Widely used in transport, construction. In electrical cables, busbars. In storage tanks, reflectors for radiant heat. As finisher in steel industry. Finely divided in thermite, paints, explosives. Implicated in Alzheimer's disease. Hard, strong, silvery-white metal: in bulk form protected from oxidation in air by coherent Al_2O_3 coating. Sol. alkalis; when finely divided, sol. hot H_2O. Mp 660.4°. Bp 2494° (2467°). Reduces many oxides to the free metal (cf. thermite welding process). Reacts with S, P, N at high temps: with C at 1000°. V. pure Al is resistant to most acids (except aqua regia). Halogens react vigorously with Al. Superconductor near abs. zero.
▷ BD0330000.

[AlB] IC-000099

Aluminium borides

[37367-77-4]

At least four phases known. AlB_2, AlB_{12} are commercially available.

Aluminium boride* (AlB_2), *9CI, 8CI [12041-50-8]
Aluminium diboride
AlB_2 M 48.6
Struct. has hexagonal nets of B atoms each surrounded by 6 Al at corners of trigonal prisms. Synth. from H_3BO_3, (or KBF_4) + Al at 800-1300° or Al + B_2O_3/KCl at 1200°. Black cryst. platelets with metallic lustre, or needles (hexagonal stars). Mp *ca.* 1350°. Metallic conductor: 333 Ω^{-1} m^{-1}. When finely divided, begins to oxidise in air at 700-800°. Dec. at *ca.* 1350° → AlB_{12} + B. Reacts slowly with H_2O, aq. HCl.

***Aluminium boride* (AlB_4)** [111050-36-3]
AlB_4 M 70.2
Struct. has chains of B_6 octahedra joined by B_2 with Al in tunnel-like cavities. Dark solid, not well-characterised.

Aluminium boride* (AlB_{12}), *9CI, 8CI [12041-54-2]
Aluminium dodecaboride
AlB_{12} M 156.7
Exists in α (tetragonal) and γ (orthorhombic) modifications. 'β-Phase' contains C. α-Form contains 3-D array of B_{12} icosahedra, B_{10} units and single B atoms. The B_{10} units are twinned icosahedra with triangular plane and vacant apex on each side. B sites in ratio 2:1:1. Al atoms distributed statistically. Synth. from Al + $Na_4B_4O_7$ at 1000-1100°; or Al + B at 1100-1200°. Employed in manuf. of lightweight armour plate; also catalyst for org. reactions. Yellow to brown acicular prisms or tetragonal bipyramids. Mp *ca.* 2070°. When finely divided, begins to oxidise in air at *ca.* 650°. Dec. to AlB_2 at 1350-1450°. α-form stable 1000-2000°. Band gap E_g^* 1.8-1.9 eV.

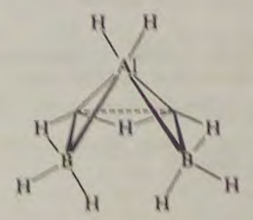
AlB_4H_{11} IC-000101

Dihydro[η^4-nonahydrotetraborato(1–)]aluminium, 10Cl

[76797-41-6]



M 81.3
Obt. from Aluminium(*III*) borohydride, IC-000100 and B_2H_6. Amorph. white solid. Dec. >140°. Insol. C_6H_6, hexane.

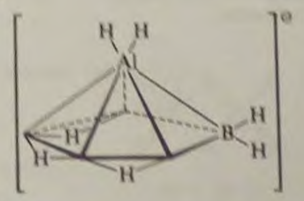
▷ Pyrophoric.

Himpsl, F.L. *et al*, *J. Am. Chem. Soc.*, 1981, **103**, 1098 (*synth, ir, powder struct*)

$AlB_5H_{11}^{\ominus}$ IC-000102

Dihydro[η^4-nonahydropentaborato(2–)]aluminate(1–), 10Cl

[76797-37-0]



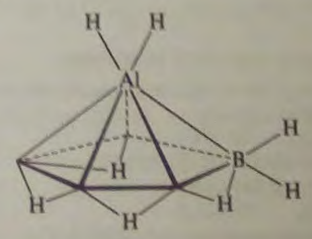
M 92.1 (ion)
Proposed struct. shown. By reaction of AlB_4H_{11} with $BH_4^{\ominus}$ in diglyme. No phys. props. reported.

Himpsl, F.L. *et al*, *J. Am. Chem. Soc.*, 1981, **103**, 1098 (*synth*)

AlB_5H_{12} IC-000103

[η^4-Decahydropentaborato(1–)]dihydroaluminium

[76797-40-5]



M 93.1
From Aluminium(*III*) borohydride, IC-000100 and B_5H_9. Light yellow air- and moisture-sensitive amorph. solid. Insol. C_6H_6.

Himpsl, F.L. *et al*, *J. Am. Chem. Soc.*, 1981, **103**, 1098 (*synth, ir*)

$AlB_6H_{12}^{\ominus}$ IC-000104

Dihydro[η^4-decahydrohexaborato(2–)]aluminate(1–), 10Cl

[76797-36-9]

$[AlB_6H_{12}]^{\ominus}$

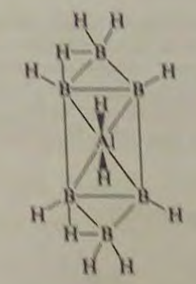
M 103.9 (ion)
arachno class, struct. unknown. Synth. by reaction of AlB_5H_{12} with $BH_4^{\ominus}$ in diglyme. Not isol.

Bond, A.C. *et al*, *J. Am. Chem. Soc.*, 1981, **103**, 1098 (*synth*)

AlB_6H_{13} IC-000105

Dihydro[η^4-undecahydrohexaborato(1–)]aluminium, 10Cl

[76797-39-2]



proposed struct.

M 104.9
Obt. by dec. of $(BH_4)Al(B_3H_8)_2$ at 100°. Possesses exceptionally high thermal stability. White solid.

▷ Pyrophoric.

Bond, A.C. *et al*, *J. Am. Chem. Soc.*, 1981, **103**, 1098 (*synth, ir*)

$AlB_8O_{15}^{3\ominus}$ IC-000106

Aluminononaborate(3–), 11Cl

$[AlB_8O_{15}]^{3\ominus}$

M 353.4 (ion)
Contains B_3O_3 – triborate and B_5O_6 – pentaborate groups bonded via AlO_4 tetrahedra in an infinite 2D double layer struct.

Tri-K salt: [84067-38-9].
Colourless cryst.

Tanaka, Y. *et al*, *CA*, 1983, **98**, 21013 (*synth, cryst struct*)

[AlBa] IC-000107

Aluminium-barium system

***Aluminium barium* (Al_2Ba_3)** [117248-52-9]
Al_2Ba_3 M 546.8
From metals at 1000°. Metallic cryst. (melt).

Fornasini, M.L. *et al*, *Acta Crystallogr., Sect. C*, 1988, **44**, 1355.

IC-000108

$AlBa_2F_8Zn$

Barium μ-fluorotetrafluoro(tetrafluoroaluminate)zincate(4−)

Aluminium barium zinc fluoride ($AlBa_2ZnF_8$)

[34667-67-4]

$Ba_2[AlZnF_8]$

M 538.0

MF_6 octahedra with statistical distributions of Zn, Al at M sites are linked through corners to stair-like framework. Synth. from BaF_2, ZnF_2 and AlF_3 in F_2 at 550-750°. Colourless moisture sensitive cryst. (melt).

Fleischer, T. *et al*, *Z. Anorg. Allg. Chem.*, 1982, **492**, 83 (*synth, cryst struct*)

IC-000109

$AlBe_2Ca_2KO_{30}Si_{12}$

Milarite

[12251-59-1]

$KCa_2AlBe_2(Si_{12}O_{30}).H_2O$

M 981.2

Unbranched, dicyclosilicate (6 SiO_4 tetrahedra per ring). Also formulated as $KCa_2(Be,Al)_3[Si_{12}O_{30}].0.75H_2O$. Mineral. Pale green transparent cryst.

Povarennykh, A.S., *Mineral. Zh.*, 1979, **1**, 3 (*ir*)
Černý, P. *et al*, *Can. Mineral.*, 1980, **18**, 41 (*cryst struct*)
Janeczek, J., *Mineral. Mag.*, 1986, **50**, 271 (*cryst struct*)

IC-000110

AlBr

Aluminium(*I*) bromide (AlBr)

[22359-97-3]

AlBr

M 106.8

Unstable sp. studied in gas phase or in Ne or Ar matrices. From Al(g)/Ar + Br_2 or generated in graphite furnace. Species for detn. of traces of Br. ΔH°_{f298} AlBr(g) +15.1 kJ mol^{-1}; S° 239.5 J K^{-1} mol^{-1}.

Rosenwaks, S., *J. Chem. Phys.*, 1976, **65**, 3668 (*ir*)
Schnöckel, H., *Z. Naturforsch., B*, 1976, **31**, 1291 (*synth, ir*)

Tsunoda, K. *et al*, *Spectrochim. Acta, Part B*, 1980, **35**, 715 (*ir*)

AlBrO IC-000111

Aluminium(*III*) bromide oxide (AlBrO)

[13596-10-6]

AlOBr

M 122.8

Struct. with alternate Al—O and Br layers. From As_2O_3 + $AlBr_3$ in sealed tube. White moisture sensitive cryst. Dec. >460°.

Hagenmuller, P. *et al*, *Compt. Rend. Hebd. Seances Acad. Sci. Sect. C*, 1961, **252**, 282 (*synth, props*)
Hagenmuller, P. *et al*, *Z. Anorg. Allg. Chem.*, 1963, **323**, 1 (*synth, powder struct*)
Batsanov, S.S. *et al*, *J. Struct. Chem. USSR (Engl. Transl.)*, 1968, **9**, 282 (*rev*)

AlBrS IC-000112

Aluminium bromide sulfide (AlBrS)

Aluminium(III) *sulfide bromide*

AlSBr

M 138.9

Synth. from Al_2S_3 + $AlBr_3$ in sealed tube. White v. hygroscopic needles. Insol. org. solvs.

Hagenmuller, P. *et al*, *Z. Anorg. Allg. Chem.*, 1963, **323**, 1 (*synth, powder struct*)
Lin Zhengyan, *et al*, *Z. Anorg. Allg. Chem.*, 1984, **513**, 67 (*synth, ir, raman*)

IC-000113

AlBrSe

Aluminium(*III*) bromide selenide (AlBrSe)

[29758-55-2]

AlBrSe

M 185.8

Synth. from Al_2Se_3 + $AlBr_3$. V. hygroscopic white powder. Insol. Et_2O, C_6H_6, THF, CS_2, CCl_4.

Palvadeau, P. *et al*, *Bull. Soc. Chim. Fr.*, 1967, 2698 (*synth, powder struct, props*)
Lin Zhengyan, *et al*, *Z. Anorg. Allg. Chem.*, 1984, **513**, 67 (*synth, powder struct, raman, ir*)

IC-000114

AlBrTe

Aluminium(*III*) bromide telluride (AlBrTe)

AlBrTe

M 234.4

Synth. from $AlBr_3$ + Al_2Te_3 or $AlBr_3$ + ZnTe in sealed tube at 350°. Poorly cryst. creamy v. hygroscopic powder. Insol. Et_2O, EtOH, Me_2CO, C_6H_6, $CHCl_3$, CCl_4.

Rouxel, J. *et al*, *Bull. Soc. Chim. Fr.*, 1966, 2044 (*synth, props*)

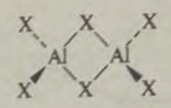
IC-000115

$AlBr_3$

Aluminium(*III*) bromide ($AlBr_3$)

Aluminium tribromide

[7727-15-3]



Dimer

X = Br

M 266.6

Dimeric molecular structure in solid, liq. and oligomeric $(AlBr_3)_n$ n = 1,2,4,6 in gas. Monomer studied in Ar matrix. Synth. from elements at 100°. Lewis acid. Friedel Crafts catalyst. Catalyst for alkane isom. Agent for chemical transport in metal halide synth. Commercially available. Forms many complexes with Lewis bases and weak adducts with aromatic hydrocarbons, alkenes and alkynes. ΔH_f°(s) −494.8 kJ mol^{-1} (per $AlBr_3$). $\Delta H_{f\ 298}^\circ$ −527.2 kJ mol^{-1}; S° 180.2 J K^{-1} mol^{-1}.

▷ Reacts violently with H_2O. BD0350000.

Hexahydrate: [7784-11-4]. *Hexaaquaaluminium(3+) tribromide*
$AlBr_3H_{12}O_6$ M 374.7
Colourless needles (H_2O). Mp 93°.

C_6H_6 complex: [6736-24-9].
$C_6H_6Al_2Br_6$ M 611.5
Colourless air sensitive cryst. (C_6H_6). C_6H_6 and Al_2Br_6 present in cryst. Similar compds. with toluene and xylenes descr.

$SbBr_3$ complex: see *Tribromo(tribromostibine)aluminium*, *IC-000119*

Dimer: Di-μ-bromotetrabromodialuminium
Al_2Br_6 M 533.3
Colourless moisture-sensitive hexagonal plates. In presence of HBr reacts slowly with aliphatic hydrocarbons. Sol. C_6H_6, CS_2, hexane. Mp 97°. Bp 250-270°.

$AlBr_3O_9$ IC-000116

Aluminium bromate ($Al(BrO_3)_3$)

$Al(BrO_3)_3$

M 410.6

Obt. as nonahydrate.

Nonahydrate:
$AlBr_3H_{18}O_{18}$ M 572.8
From $Al(SO_4)_3$ and $Ba(BrO_3)_2$. Sl. hygroscopic white cryst. (H_2O). Mp 62°.

Compr. Inorg. Chem., Pergamon, Oxford, 1973, **1**, 1058.

$AlBr_4^\ominus$ IC-000117

Tetrabromoaluminate(1−)

[22602-42-2]

$[AlBr_4]^\ominus$

M 346.5 (ion)

Species $[AlCl_nBr_{4-n}]^\ominus$ also descr.

Li salt: [15003-50-6]. *Lithium tetrabromoaluminate* (*$LiAlBr_4$*)
$AlBr_4Li$ M 353.5
From LiBr + $AlBr_3$ in EtBr. White moisture-sensitive cryst. Mp 195°.

Na salt: [23630-67-3]. *Sodium tetrabromoaluminate* (*$NaAlBr_4$*)
$AlBr_4Na$ M 369.5
From NaBr + $AlBr_3$ in EtBr. White moisture-sensitive cryst. Mp 199°.

K salt: [18041-28-6]. *Potassium tetrabromoaluminate* (*$KAlBr_4$*)
$AlBr_4K$ M 385.6
From KBr + $AlBr_3$ in C_2H_5Br. White moisture-sensitive cryst. Mp 192°. Two modifications descr.

Rb salt: [18041-29-7].
$AlBr_4Rb$ M 432.0
Obt. from RbBr-$AlBr_3$ melt. White moisture-sensitive cryst. Mp 278°.

Cs salt: [18041-30-0].
$AlBr_4Cs$ M 479.5
Obt. from CsBr-$AlBr_3$ melt. White moisture-sensitive cryst. Mp 357°.

Me_4N salt: [22578-15-0].
From $[Me_4N]Br$ + $AlBr_3$ in CH_2Br_2. Colourless moisture sensitive cryst. (CH_2Br_2/cyclohexane). Et_4N salt also descr.

IC-000121

$AlCa_2H_8O_{12}Si_4$

Gismondine
Gismondite (improper)
[12251-23-9]

$Ca_4[Al_8Si_8O_{32}].16H_2O$

M 363.3
Zeolite struct. GIS with chains of $(Al,Si{-}O)_4$ or $(Al,Si{-}O)_8$ rings giving 3D system of elliptical channels (310 × 450 or 280 × 490 pm across). Member of phillipsite group. Mineral found in Israel, Senegal, Australia, USA, Ireland, Rome, Iceland, Czechoslovakia and Faeroe Islands. White cryst. Related minerals Amicite and Gobbinsite also descr.

Me_4N-form:
$C_8H_{16}AlNO_8Si_3$ M 331.3
Synthetic zeolite obtained hydrothermally at 130°. White cryst. Absorbs var. amts. H_2O. Formulated as e.g. $Me_4NAlSi_3O_8.H_2O$.

Mineral-form:
$Al_2CaH_8O_{12}Si_4$ M 350.2
Rather rare zeolite of hydrothermal origin; occurs in cavities of massive rocks. Colourless to white or grey solid.

[1318-56-5]

AlClS IC-000127

Aluminium(*III*) chloride sulfide (AlClS)
[22847-28-5]

AlClS

M 94.5
Synth. from Al, S, $AlCl_3$ at 300°. Hygroscopic white needles.

Hagenmuller, P. *et al*, *Z. Anorg. Allg. Chem.*, 1963, **323**, 1 (*synth, powder struct*)
Paulsen, K.A. *et al*, *J. Am. Chem. Soc.*, 1976, **98**, 6866 (*electrochemical data*)
Robinson, J. *et al*, *Inorg. Chem.*, 1977, **16**, 3040 (*electrochemical data*)
Berg, R.W. *et al*, *Inorg. Chem.*, 1980, **19**, 2688 (*synth, raman*)
Lin Zhengyan, *et al*, *Z. Anorg. Allg. Chem.*, 1984, **513**, 67 (*ir, raman*)

AlClSe IC-000128

Aluminium chloride selenide (AlClSe)
Aluminium(III) selenide chloride
[43337-67-3]

AlClSe

M 141.3
Synth. from $AlCl_3$, Al_2Se_3 at 350°. V. hygroscopic off white creamy powder. Insol. Et_2O, C_6H_6, THF, CS_2, CCl_4.

Palvadeau, P. *et al*, *Bull. Soc. Chim. Fr.*, 1967, 2698 (*synth, powder struct*)
Robinson, J. *et al*, *Inorg. Chem.*, 1977, **16**, 3040 (*electrochem*)

Lin Zhengyan, *et al*, *Z. Anorg. Allg. Chem.*, 1984, **513**, 67 (*ir, raman*)

AlClTe IC-000129

Aluminium chloride telluride (AlClTe)
Aluminium(III) telluride chloride
[13824-68-5]

AlClTe

M 190.0
From $AlCl_3$ + Al_2Te_3 at 350° or from $AlCl_3$ + ZnTe at 400°. Creamy, v. moisture sensitive powder. Insol. Et_2O, EtOH, Me_2CO, C_6H_6, $CHCl_3$, CS_2, CCl_4.

Rouxel, J. *et al*, *Bull. Soc. Chim. Fr.*, 1966, 2044 (*synth, props*)
Robinson, J. *et al*, *Inorg. Chem.*, 1977, **16**, 3040 (*electrochem*)

$AlCl_2$ IC-000130

Aluminium(*II*) chloride ($AlCl_2$)
[16603-84-2]

$AlCl_2$

M 97.8
Isol. in Ar matrix or as unstable solid. From Al + $AlCl_3$ in heptane or *in vacuo* at 580°. May be intermed. in formation of alkylaluminium deriv.

Olah, G.A. *et al*, *J. Am. Chem. Soc.*, 1988, **110**, 3231 (*synth, ir*)

$AlCl_2H$ IC-000131

Aluminium chloride hydride ($AlCl_2H$)
Aluminium dichloride hydride. Dichloroalane
[13497-97-7]

$AlCl_2H$

M 98.8
From $LiAlH_4$ and $AlCl_3$ (1:3). Reagent for reduction of alkenes, ketones, cyclic ethers. Usually used *in situ*.

Et_3N complex: [17275-40-0]. *Dichlorohydro(triethylamine) aluminium, 8CI. Dichloro(N,N-diethylethanamine) hydroaluminium, 10CI*
$C_6H_{16}AlCl_2$ M 186.0
From $LiAlH_4$ + $AlCl_3$ + Et_3N. Colourless air and moisture sensitive solid (C_6H_6). Mp 45°.

Ashby, E.C. *et al*, *J. Am. Chem. Soc.*, 1966, **88**, 729 (*synth*)
Zajac, W.W. *et al*, *J. Org. Chem.*, 1970, **35**, 3375; 1972, **37**, 521 (*use*)

Ashby, E.C. *et al*, *J. Org. Chem.*, 1979, **44**, 4364 (*use*)

$AlCl_3$ IC-000132

Aluminium(*III*) chloride ($AlCl_3$)
Aluminium trichloride
[7446-70-0]

$AlCl_3$

M 133.3
Distorted $CrCl_3$ struct. in solid state; dimeric in soln. and liq.; monomer, dimer and some trimer in vapour. Synth. from Al + Cl_2 or from Al + HCl at 500°. Lewis acid. Friedel Crafts catalyst. Intermed. in one process for manuf. of Al. Commercially available. Colourless hexagonal v. moisture sensitive plates. Mp 192° (2.5 atm). Subl. 180°. ΔH_f°(s) −705.8 kJ mol^{-1}; S° 109.2 J K^{-1} mol^{-1}. Many complexes descr.

▷ Reacts violently with H_2O. BD0525000.

Hydrate: [10124-27-3]. *Aluminium chloride hydrate*
Commercially available. A mixture of hydrated species $AlCl_3.x\,H_2O$.

Hexahydrate: [7784-13-6]. *Hexaaquaaluminium(3+) chloride*
$AlCl_3H_{12}O_6$ M 241.4
Salting agent in soap industry; component of deodorant prepns., wood preservative; in photofixing baths. Colourless cryst. (H_2O). Mp 100° dec.
▷ BD0530000.

NH_3 complex: see *Amminetrichloroaluminium, IC-000133*
Et_2O complex: [39624-48-1].

$(C_6H_{12}AlCl)_2$ M 207.6
White moisture sensitive plates (C_6H_6). Sol. C_6H_6, Et_2O; insol. cold hexane. Mp 30°. Mild (1) catalyst. Also dimer.

$(Bu_2AlCl_2NO)_2$ M 194.1
White moisture sensitive cryst. (C_6H_6/cyclohexane). Mp 87°.

$(Ph_2NO)_2$ complex:
$C_{24}H_{20}AlCl_2NO_2$ M 236.4
Bright yellow moisture sensitive cryst. ($CHCl_3$). Mp 75°.

Complex with nitrogen sulfide (N_2S_2) (1:1): [82557-52-0].
Bis(acetonitrile)(dimorpholinodithiolato-N,N')aluminium
$AlC_{12}N_4S_2$ M 156.8
Obt. from $AlCl_3$ and S_2N_2 in CH_2Cl_2. With S_2N_2 at 80° gives S_4N_4. Colourless air and moisture sensitive needles (CH_2Cl_2). Mp 151° dec.

Complex with nitrogen sulfide (N_2S_2): [38442-60-3].
$AlCl_3N_2S_2$ M 217.6
Obt. from S_2N_2 + $AlCl_3$ in 1,2-dichloroethane. Dark red air and moisture sensitive cryst. (1,2-dichloroethane).
Corresp. $AlBr_3$ adduct also descr.

$AlCl_3H_3N$ IC-000133

Aminetrichloroaluminium

Aluminium trichloride ammonia

[13550-09-3]

Cl_3AlNH_3

M 150.3
Monomeric in solid state. White moisture sensitive cryst. Mp 133°. Bp ~420°, Bp_1 195°. Forms solid solns. with $AlBr_3NH_3$.

Gerding, H. *et al*, *Rec. Trav. Chim. Pays-Bas U. R. Neth. Chem. Soc.*, 1953, **74**, 15 (*raman*)

$AlCl_3O_9$ IC-000134

Aluminium chlorate ($Al(ClO_3)_3$)

$Al(ClO_3)_3$

M 277.3
Hexahydrate. Colourless cryst. (H_2O).
▷ May react violently with filter paper.

Mishler, R.M., *Inorg. Chem.*, 1964, **3**, 199 (*nqr*)

$AlCl_3O_{12}$ IC-000135

Aluminium perchlorate ($Al(ClO_4)_3$)

[14452-39-2]

$Al(ClO_4)_3$

M 325.3
Synth. from $AlCl_3$ and $AgClO_4$ in C_6H_6. Commercially available. Aq. solns. source of Hexaaquaaluminium(3+), IC-000191. Similar species in DMF, dioxan, etc. White hygroscopic cryst. Reacts slowly with paraffin hydrocarbons. Dec. >150°. Sol. H_2O, Et_2O; insol. CCl_4, freons. Salts $MAl(ClO_4)_4.2H_2O$ (M = Rb or Cs) also descr.
▷ May explode.
4.5 Hydrate: Colourless hygroscopic cryst.
Hexahydrate: [22993-14-2]. *Hexaaquaaluminium(3+) triperchlorate*
$AlCl_3H_{12}O_{18}$ M 433.4
From hydrated alumina and aq. HCl. Colourless cryst. (H_2O).
Heptahydrate with 4 dioxan: Colourless hygroscopic cryst. (H_2O). Sol. H_2O, MeOH, Me_2CO, EtOAc; spar. sol. Et_2O; insol. C_6H_6, $CHCl_3$, CCl_4.
▷ May explode when dry.
Cl_2O_6 complex:
$AlCl_5O_{18}$ M 492.2
From $AlCl_3$ and Cl_2O_6. Orange v. hygroscopic solid. Sol. SO_2.
▷ May explode with org. liqs.

$AlCl_4^-$ IC-000136

Tetrachloroaluminate(1−)

[17611-22-2]

$[AlCl_4]^-$

M 168.7 (ion)
Species $[M(AlCl_4)_3]^{n-}$, M = Mn, Co or Ni also descr. Species $[AlCl_nBr_{4-n}]^-$ also descr.
Li salt: [14024-11-4]. *Lithium tetrachloroaluminate (LiAlCl4)*
$AlCl_4Li$ M 175.7
Obt. from LiCl and $AlCl_3$. Commercially available. White hygroscopic cryst. (melt). Mp 143.5°. High ionic conductivity in solid: $10^{-4}\ \Omega^{-1}\ m^{-1}$.
Li salt, tris-SO_2 complex: [76229-54-4]. *Tris(sulfur dioxide-O)lithium(1+) tetrachloroaluminate(1−)*
Obt. from $LiCl/AlCl_3/SO_2$. White moisture sensitive cryst. Mp 30°.
Na salt: see *Sodium tetrachloroaluminate*(III) (*$NaAlCl_4$*), *IC-000141*
K salt: [13821-13-1]. *Potassium tetrachloroaluminate ($KAlCl_4$)*
$AlCl_4K$ M 207.8
Obt. from KCl + $AlCl_3$. Colourless moisture sensitive cryst. (melt). Monomers and dimers detected by ms in vapour. $\Delta H^\circ_{f\ 298}$ −1196.6 kJ mol^{-1}; S° 196.6 J K^{-1} mol^{-1}.
Rb salt: [17992-02-8]. *Rubidium tetrachloroaluminate ($RbAlCl_4$)*
$AlCl_4Rb$ M 254.2
Obt. from RbCl + $AlCl_3$. Colourless moisture sensitive cryst. (melt).
Cs salt: see *Caesium tetrachloroaluminate(1−), IC-000137*
Ti(II) *salt:* see *Tetra-μ-chlorobis(dichloroaluminium) titanium*(II), *IC-000280*
Co(II) *salt:* [13820-62-7].
Al_2Cl_8Co M 396.5
Catalyst for polym. of 1,3-butadienes. Blue moisture sensitive needles. Possesses struct. in which $AlCl_4$ tetrahedra and $CoCl_6$ octahedra share corners and edges.
Cu(II) *salt:* see *Copper*(II) *tetrachloroaluminate ($Cu(AlCl_4)_2$), IC-000277*

$AlCl_4Cu$ IC-000138

Copper tetrachloroaluminate

[27803-79-8]

$CuAlCl_4$

M 232.3
Separates olefins from alkanes; CO from alkanes and arenes, CO_2.

U.S. Pat., 3 754 047, (1973); *CA*, **79**, 104734q.
U.S. Pat., 3 755 487, (1973); *CA*, **79**, 104730k.
Japan. Pat., 78 67 691, (1978); *CA*, **89**, 165629n (*use*)
Japan. Pat., 78 82 695, (1978); *CA*, **89**, 165628m (*use*)

$AlCl_4Ga$ IC-000139

Gallium(*I*) tetrachloroaluminate(*III*)

Aluminium gallium chloride ($AlGaCl_4$)

[11070-76-1]

$Ga[AlCl_4]$

M 238.5
Synth. from Ga, $GaCl_3$ and $AlCl_3$ at 220°. White moisture sensitive solid. Mp 167°.

Peterson, P.J. *et al*, *Aust. J. Inorg. Chem. (Engl. Transl.)*, 1968, **13**, 1740, **15**, 1613 (*phase diagram*)
Brinkman, F.J. *et al*, *Inorg. Nucl. Chem. Lett.*, 1971, **7**, 667 (*synth, ir, raman*)

IC-000140

$AlCl_3In$

Indium(*I*) tetrachloroaluminate(*III*)

[13933-98-3]

$In[AlCl_4]$

M 283.6
Synth. from $HgCl_2$, Al and In at 325°. May be important in chemical vapour transport. Colourless v. hygroscopic solid. Mp 263°. Reported compd. Al_2Cl_6In not confirmed in later work. With Et_2O gives Indium(*I*) chloride [InCl]. IC-010462 and $[Et_2O.AlCl_3]$

IC-000141

$AlCl_4Na$

Sodium tetrachloroaluminate(*III*) ($NaAlCl_4$)

Sodium aluminium chloride (NaAlCl4)
Tetrachloroaluminate(1−), sodium salt, 8CI

[7784-16-9]

$NaAlCl_4$

M 191.7
Synth. by treating a suspension of NaCl in SO_2Cl_2 with $AlCl_3$ in SO_2Cl_2. Catalyst for cracking of hydrocarbons. Pale yellow orthorhombic cryst. Mp 151°. ΔH_f° −1142 kJ mol^{-1}; ΔG_f° −998 kJ mol^{-1}; S° 188 J K^{-1} mol^{-1}. Monomers and dimers detected by ms in vapour.

IC-000142

$AlCl_4O_3Re$

Chlorotrioxo(trichloroaluminium)rhenium(*VII*)

Chloro-μ-oxodioxo(trichloroaluminium)rhenium, 10Cl

[71499-76-8]

$ClRe(O)_2{-}O{-}AlCl_3$

M 402.9
Believed to have Re—O—Al bridge. Synth. from ReO_3Cl and $AlCl_3$ in CCl_4. Extremely hygroscopic orange-red cryst. Mp 42°. Ir ν_{Re-O} 949 cm^{-1}.

Lösberg, R. *et al*, *Z. Naturforsch., B*, 1979, **34**, 1040 (*synth, ir*)

IC-000143

$AlCl_4O_{12}S_4^{\ominus}$

Tetrakis(chlorosulfato)aluminate(1−)

Tetrakis(chlorosulfurato-O)aluminate(1−)

$[Al(SO_3Cl)_4]^{\ominus}$

M 489.0 (*ion*)

Na salt: [34460-36-5]
Synth. from $NaAlCl_4$ + SO_3 in liq. SO_2. V. hygroscopic white solid (liq. SO_2); dec. on heating to $NaAl(SO_4)_2$ + $2SO_2Cl_2$. Li and K salts are similar.

Vandorpe, R. *et al*, *Bull. Soc. Chim. Fr.*, 1971, 2878 (*synth, ir, tga*)

IC-000144

$AlCl_6Na_3$

Sodium hexachloroaluminate(*III*) (Na_3AlCl_6)

Trisodium aluminium chloride (Na3AlCl6)
Hexachloroaluminate(3−), trisodium salt, 8CI

[60172-46-5]

Na_3AlCl_6

M 308.6
White solid. Mp 527°. ΔH_f° −2092 kJ mol^{-1}; ΔG_f° −1938 kJ mol^{-1}; S° 377 J K^{-1} mol^{-1}.

Chase, M.W. *et al*, *J. Phys. Chem. Ref. Data*, 1985, **14**, 92 (*thermodyn data*)

IC-000145

$AlCl_6O_6P_3$

Aluminium dichlorophosphate

Aluminium phosphorodichloridate
Tris(phosphorodichloridato)aluminium

$Al(O_2PCl_2)_3$

M 428.6
Synth. from $AlCl_3$ + Cl_2O/N_2 in $POCl_3$ solv. Colourless, moisture-sensitive cryst. ($POCl_3$). Insol. CCl_4, C_6H_6; spar. sol. Py, $POCl_3$; sol. DMSO, DMF. Mp > 350°.

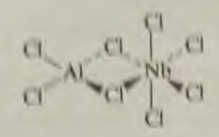
Müller, H. *et al*, *Z. Anorg. Allg. Chem.*, 1967, **350**, 231 (*synth, ir*)

IC-000146

$AlCl_6Nb$

Di-μ-chlorotetrachloro(dichloroaluminium)niobium(*V*), 11Cl

[87969-73-1]



M 403.5
The struct. persists in $AlCl_3$ melts and in the vapour phase. Synth. from $AlCl_3$ and $NbCl_5$ at 200° in a sealed ampoule or by heating AlSCl and $NbCl_5$ at the same temp. Mp 139.7°. Corresp. bromide may be similarly obt.

Krebs, B. *et al*, *Inorg. Chem.*, 1984, **23**, 164 (*synth, cryst struct, raman*)

IC-000147

[AlCoFeNi]

Alnico

[8057-41-8]

A family of carbon-free Fe-based alloys containing Al, Ni and Co with some Cu (~3%) and Ti. Alnico V (8 Al, 14 Ni, 24 Co, 3 Cu, 51 Fe) is the most widely used. Produced by casting or by powder metallurgy. Used for permanent magnets.

IC-000148

[AlCr]

Aluminium chromium system

Chromium aluminium

Aluminium chromium **(Al_8Cr_5)**

Al_8Cr_5 M 475.8
Synth. from the elements by rapid quenching of melt from 1215°. Metal.

Brandon, J.K. *et al*, *Acta Crystallogr., Sect. B*, 1977, **33**, 1088 (*cryst struct*)

IC-000149

$AlCsF_4$

Caesium tetrafluoroaluminate(1−)

[39211-00-2]

$Cs[AlF_4]$

M 235.8
In solid state, struct. comprises AlF_6 octahedra sharing corners to form 3-fold parallel strands. Cs 8-coord. Monomer $Cs(\mu{-}F)_2AlF_2(C_{2v})$ in vapour. Synth from CsF and AlF_3 at 450° or hydrothermally at 300° and 1600 atm. Transparent moisture sensitive hexagonal plates (melt).

IC-000152

[AlCu]

Copper-aluminium system

Aluminium copper system. Aluminium bronzes

Many stoichiometries known. As the % Al increases, wear and corrosion resistance increase but ductility decreases.

α-Copper aluminium

α-form
Fcc solid soln. Aluminium bronzes used for carrying corrosive liqs., such as hot brine in salt refineries. Ductile. Forms an eutectic with β phase at 1037° and 8.5% Al.

Copper aluminium **(*3:1*)** [12003-30-4]

β-form
$AlCu_3$ M 217.6
Stronger and harder than α-phase. Dec. on slow cooling to give α + γ_2 at 565° (eutectic), but at normal rates a high proportion of β is retained.

β-form: Stable above 570°. Disordered W type struct.
β_1-form: Exists around ~300° - unstable. $CoAs_3$ type struct.
β'-form: Stable below 300°. Believed to have Cu type struct.

Copper aluminium **(*9:4*)** [12004-92-1]

γ-Copper-aluminium
Al_4Cu_9 M 679.8
Struct. similar to γ-brass.

Copper aluminium **(*2:1*)** [12003-26-8]

$AlCu_2$ M 154.0
hcp struct.

Copper aluminium **(*1:1*)** [12003-21-3]

η-form
AlCu M 90.5
Orthorhombic.

Copper aluminium **(*1:2*)** [12004-15-8]

Al_2Cu M 117.5
Tetragonal metastable states exist. C16 struct. type is stable form. This consists of 5-connected nets of Al atoms, with Cu atoms between layers.

IC-000154

AlF_3

Aluminium(*III*) fluoride (AlF_3)

Aluminium trifluoride

[7784-18-1]

AlF_3

M 83.9
Has LaF_3 struct. in solid state. Mainly monomeric in vapour, with small amounts of dimer. Constit. of electrolyte in aluminium smelting. Also in ceramics, glass, enamels. With KHF_2 reagent for prepn. of fluorohydrins. Commercially available. Colourless cryst. Spar. sol. H_2O; insol. org. solvs. Subl. 1270°, ε 4.9; n_D 1.382. $\Delta H_{f\,298}^\circ$ −1510.4 kJ mol^{-1}; S° 66.5 J K^{-1} mol^{-1}.

▷ BD0725000.

Trihydrate: [15098-87-0].
α-Form from HF and Al; β-form from aq. AlF_3 at 100°. Colourless cryst. (H_2O).
Nonahydrate: [15098-89-2].
Colourless cryst. (H_2O).

AlH_3O_3

Aluminium hydroxide ($Al(OH)_3$)

[21645-51-2]

$Al(OH)_3$

M 78.0

Commercially available. White solid (H_2O). Proc. insol. H_2O; sol. conc. aq. acids and alkalis. Forms gel on prolonged contact with H_2O.

▷ BD0940000.

Gel: [1330-44-5]. *Algedrate, USAN, INN. Aluminium hydroxide hydrate. W4600*
Antacid.

Mineral-form [14762-49-3]
Gibbsite. Hydragillite
Double layer of close packed OH of held by H bonds with Al in $\frac{2}{3}$ octahedral holes. Widespread mineral occurs as an alteration product of aluminium bearing minerals (Norway). Colourless hexagonal platelets.

Mineral-form [20257-20-9]
Bayerite
Layer struct. with O approx. hcp and Al octahedrally coord. Synth. from aq. $AlCl_3$ and $[NH_4]OH$ at pH 8. Mineral occurs in sedimentary rock at sites in Israel and Britain. White powder, colourless monoclinic cryst.

Mineral-form [13840-05-6]
Nordstrandite

Double layers of AlO_6 octahedra with shared edges and corners linked by H bonds. Obt. by cryst. of $Al(OH)_3$ using $(CH_2OH)_2$ or $(CH_2NMe_2)_2$. Mineral found at many locations. Colourless, beige, pink and pale green cryst.

Mineral-form
Dayleite
Mineral found at sites in Canada. Creamy or bluish white triclinic cryst.

$AlH_3O_8P_2$

Aluminium phosphate ($AlH_3(PO_4)_2$)

Aluminium phosphate (1:2). Aluminium trihydrogen bisphosphate

[13967-89-0]

$AlH_3(PO_4)_2$

M 219.9

Several hydrates descr. From $(NH_4)_2HPO_4$ + $Al_2(SO_4)_3$ followed by dehydration at 200°. Constit. of many commercial binders and adhesives. White cryst. On heating, undergoes a complex series of reactions.

Monohydrate: [66906-02-3].
From Al_2O_3, H_3PO_4, H_2O at 100-120°. White solid.

Trihydrate: [39611-87-5].
From Al_2O_3, H_3PO_4 and H_2O at 25°. White solid (H_2O).

$AlH_4^{\ominus}$

Tetrahydroaluminate(1−)

Aluminohydride

[19469-81-9]

$[AlH_4]^{\ominus}$ (T_d)

M 31.0 (ion)

Li salt: see *Lithium aluminium hydride, IC-000183*

Na salt: [13770-96-2]. *Sodium tetrahydroaluminate. Aluminium sodium hydride ($AlNaH_4$). Lithium alanate*
AlH_4Na M 54.0
From Na, Al and H_2 in THF at 150° and 140 atm. White v. moisture sensitive solid. Insol. Et_2O; sol. THF, diglyme. Mp 174° (185-190°). Dec. rapidly at 185°. $\Delta H_{f\ 298}^{\circ}$ −113 kJ mol^{-1}.
▷ BD0180000.

K salt: [16903-34-7]. *Potassium tetrahydroaluminate. Aluminium potassium hydride*
AlH_4K M 70.1
From K, Al and H_2 in diglyme at 150° and 140 atm. White v. hygroscopic solid. Insol. Et_2O, C_6H_6; sol. THF, diglyme. ΔH_f° −166.5 kJ mol^{-1}.

Cs salt: [16961-92-5]. *Caesium tetrahydroaluminate. Aluminium caesium hydride*
$AlCsH_4$ M 163.9
From Cs, Al and H_2 at 130° and 300 atm. White v. moisture sensitive solid. Sol. diglyme; spar. sol. toluene. Mp 310-314°. ΔH_f° −166.5 kJ mol^{-1}.

Me_4N salt: [16903-67-6].
$C_4H_{16}AlN$ M 105.1
Synth. from Me_4NBr and $LiAlH_4$. White air and moisture sensitive powder. Insol. Et_2O, THF (Et_4N salt more sol.). Dec. without melting at 170°.

IC-000183

AlH_4Li
Lithium aluminium hydride
Lithium tetrahydroaluminate(III). Tetrahydroaluminate, lithium salt, 8CI. Lithium aluminohydride. Lithal. Lithium alanate
[16853-85-3]

$LiAlH_4$

M 37.9
Prepd. by reaction of LiH with $AlCl_3$ or $AlBr_3$ in Et_2O or from $NaAlH_4$ and LiCl in Et_2O. Commercially available as solid or in soln. in Et_2O (1.0 *M*), diglyme (0.5 *M*) and THF (1.0 *M*). Versatile reducing agent. Polym. catalyst. Moisture sensitive white monoclinic cryst. Reacts violently with H_2O. Dec. on heating to form LiH, Al and H_2. Sol. Et_2O (39g per 100 cm^3), THF (15g per 100g); spar. sol. hydrocarbons. ΔH_f° –117 kJ mol^{-1}; ΔG_f° –48 kJ mol^{-1}; S° 87.9 J K^{-1} mol^{-1}.

▷ Flammable, corrosive. May catch fire in air without warning. BD0100000.

Deuterio derivs.: [14128-54-2]. *Lithium aluminium deuteride (LiAlD$_4$). Deuterated lithium aluminium hydride. Lithium tetrahydroaluminate - d_4. Tetrahydroaluminate - d_4, lithium salt, 8CI*

AlD_4Li M 41.9
Prepd. from $AlBr_3/Et_2O$ + LiD/Et_2O or from Li, Al and D_2 at 150°, 15 atm. Commercially available. Reducing agent for producing deuterated organics. V. moisture sensitive white cryst. Sol. Et_2O; spar. sol. hydrocarbons. Dec. at 98°.

▷ Produces HD on reacting violently with H_2O.

$AlH_6^{3\ominus}$
Hexahydroaluminate(3–)

$[AlH_6]^{3\ominus}$

M 33.0 (ion)
Salts formed as intermeds. in dec. of $MAlH_4$. Derivs. of several other metals also descr.

Tri-Li salt: [16941-14-3].
AlH_6Li_3 M 53.8
Synth. from $LiAlH_4$ and BuLi. White air- and moisture-sensitive microcryst. solid (hexane/Et_2O). Insol. hydrocarbons, Et_2O. Mp 210° dec. Ir ν_{Al-H} 1720 cm^{-1}.

Tri-Na salt: [17069-12-4].
AlH_6Na_3 M 101.9
Synth. from Na, Al, Et_3Al, in toluene with 300 atm. H_2; or from $NaAlH_4$ and $NaAlH_2(OCH_2CH_2NMe_2)_2$ in C_6H_6. White air- and moisture-sensitive solid. Insol. hydrocarbons, Et_2O.

Tri-K salt: [17083-63-5].
AlH_6K_3 M 150.3
Obt. from Al, K and H_2 (300 atm.). Grey air- and moisture-sensitive solid. Insol. hydrocarbons, Et_2O.

Tri-Cs salt: [53436-80-9].
$AlCs_3H_6$ M 431.7
Obt. from dec. of $CsAlH_4$ at 350°.

Tri-Cu(I) salt: [62126-19-6].
$AlCu_3H_6$ M 223.6
Not isol. Detected in mixtures of $LiAlH_4$ and CuI used as reagent for conjugate reduction α,β-enones.

$AlH_6O_{12}P_3$ IC-000188
Aluminium phosphate ($Al(H_2PO_4)_3$)
Aluminium phosphate (1:3), 9CI, 8CI. Aluminium tris(dihydrogen phosphate)
[13530-50-2]

$Al(H_2PO_4)_3$

M 317.9
Synth. from $Al(OH)_3$ + H_3PO_4; Al + H_3PO_4; Al_2O_3 + H_3PO_4 at <300°. Employed in binders eg. for glazes; metal coatings; dental cements. V. hygroscopic colourless hexagonal prisms. Mp 243°. When heated forms condensed Al phosphates via an amorphous form produced at 230-290°. Many similar compds. $Al(H_2PO_4)_x(HPO_4)_y(H_2O)_z$ descr.

Dihydrate: [124606-61-7].
Synth. from Al_2O_3—P_2O_5—H_2O system.

(1)-form
Rhombohedral cell. Isolated AlO_6 octahedra are stacked with corner-sharing PO_4 tetrahedra, and the columns are linked by H bonds. V. hygroscopic prisms. Mp 243°. Undergoes phase transition at 60° with proton reorientation.

(2)-form
Trigonal unit cell. Hygroscopic colourless cryst.

$AlH_8P_4^\ominus$ IC-000190
Tetrakis(phosphido)aluminate(1–)
Tetraphosphinoaluminate(1–)

$[Al(PH_2)_4]^\ominus$

M 158.9 (ion)

Li salt: [25248-80-0].
From $LiAlH_4$ and PH_3. Made in diglyme, used *in situ*.

Na salt: [34807-16-4].
AlH_8NaP_4 M 181.9
From $AlCl_3$ and $NaPH_2$. Made in diglyme, used *in situ*.

$AlH_{12}O_6^{3\oplus}$ IC-000191
Hexaaquaaluminium(3+)
[15453-67-5]

$[Al(OH_2)_6]^{3\oplus}$

M 135.0 (ion)
Species in acid solns. cont. Al.

Dilodate, nitrate: [57682-96-9].
Synth. from $Al(NO_3)_3$ + HIO_3 (1:2). Colourless platy cryst. (H_2O). Formulated as $[Al(OH_2)_6][IO_3]_2[NO_3]$.

H compd, complex with iodic acid: [62671-54-9].
Synth. from $Al(NO_3)_3$ + HIO_3 (1:6). Colourless cryst. (H_2O). Formulated as $[Al(OH_2)_6][IO_3]_2[HI_2O_8]HIO_3$. See also Aluminium iodate ($Al(IO_3)_3$), 1C-000197.

IC-000194

AlISe

Aluminium iodide selenide (AlISe)
Aluminium(III) selenide iodide
[29758-56-3]

AlISe

M 232.8
Synth. from Al_2Se_3 and AlI_3 at 350°. V. hygroscopic white powder. Insol. Et_2O, C_6H_6, Me_2CO, THF, CS_2, CCl_4.

Palvadeau, P. *et al*, *Bull. Soc. Chim. Fr.*, 1967, 2698 (*synth, powder struct, props*)
Lin Zhengyan, *et al*, *Z. Anorg. Allg. Chem.*, 1984, **513**, 67 (*synth, ir, raman*)

IC-000195

AlITe

Aluminium iodide telluride (AlITe)
Aluminium(III) telluride iodide

AlITe

M 281.4
Synth. from Al, I_2 and Al_2Te_3. Extremely hygroscopic creamy white solid (melt). Insol. Et_2O, EtOH, Me_2CO, C_6H_6, dioxan, $CHCl_3$, CS_2, CCl_4.

Rouxel, J. *et al*, *Bull. Soc. Chim. Fr.*, 1966, 2044 (*synth, props*)

AlI_3

Aluminium(*III*) iodide (AlI_3)
Aluminium triiodide
[7784-23-8]

AlI_3

M 407.6
In cryst., AlI_4 tetrahedra share corners to give chains as in SO_3. Lewis acid. Friedel-Crafts catalyst. Commercially available. White moisture sensitive cryst. Mp 179-189°. ΔH_f° AlI_3(s) −280.4 kJ mol^{-1}, S°_{298} 219.9 J K^{-1} mol^{-1}. Many complexes descr.
▷ Reacts violently with H_2O.

Tris-Py complex:
$C_{15}H_{15}AlI_3N_3$ M 644.9
White moisture-sensitive solid. Sol. MeOH; spar. sol. most org. solvs. Mp 195-198° dec.

Inorg. Synth., 1953, **4**, 117; 1980, **20**, 82 (*synth, complexes*)
Segel, S.L., *J. Chem. Phys.*, 1956, **25**, 578 (*nqr*)

IC-000198

AlI_3O_{12}

Aluminium periodate ($Al(IO_4)_3$)

$Al(IO_4)_3$

M 599.6
Double salt with $LiClO_4$ used in sepn. of Li from Na.

Dodecahydrate:
$AlH_{24}I_3O_{24}$ M 815.8
From $Al(NO_3)_3$ and $Na_2H_3IO_6$. Colourless cryst. (H_2O).

Ferrari, A. *et al*, *Gazz. Chim. Ital.*, 1961, **91**, 77 (*synth*)
Matějček, J. *et al*, *Collect. Czech. Chem. Commun.*, 1966, **31**, 190 (*synth, props*)

IC-000199

$AlI_4^{\ominus}$

Tetraiodoaluminate(1−)
[22602-43-3]

$[AlI_4]^{\ominus}$ (T_d)

M 534.6 (ion)
Li salt: [17992-04-0]. *Lithium tetraiodoaluminate* ($LiAlI_4$)
AlI_4Li M 541.5

Synth. from AlI_3 and LiI. White moisture-sensitive solid (melt). Mp 237°.
Na salt: [18007-74-4]. *Sodium tetraiodoaluminate* ($NaAlI_4$)
AlI_4Na M 557.5
Synth. from AlI_3 and NaI. Colourless moisture-sensitive solid (melt). Mp 220°.
K salt: [17992-05-1]. *Potassium tetraiodoaluminate* ($KAlI_4$)
AlI_4K M 573.6
Synth. from AlI_3 and KI. Colourless moisture-sensitive solid (melt). Mp 210°.
Rb salt: [18007-75-5]. *Rubidium tetraiodoaluminate* ($RbAlI_4$)
AlI_4Rb M 620.0
Synth. from AlI_3 and RbI. Colourless moisture-sensitive solid (melt). Mp 205°.
Cs salt: [18007-76-6]. *Caesium tetraiodoaluminate* ($CsAlI_4$)
$AlCsI_4$ M 667.5
Synth. from AlI_3 and CsI. Colourless moisture-sensitive solid (melt). Mp 250°. $Cs[Al_2I_7]$ also descr.
Tetraiodophosphonium salt: [86086-64-8].
Tetraiodophosphorus(1+) tetraiodoaluminate(1−)
AlI_8P M 1073.1
Synth. from $PI_3 + I_2 + AlI_3$. Dark red extremely moisture-sensitive cryst. (CS_2). Mp 110°. cf. AlI_9P_2.
Pentaiododiphosphorus(1+) salt:
AlI_9P_2 M 1231.0
Synth. from $AlI_3 + PI_3$ in CS_2. Dark brown moisture-sensitive cryst. Mp 127-130°.

Baudler, M. *et al*, *Z. Anorg. Allg. Chem.*, 1964, **329**, 3 (*synth, $P_2I_5^{\oplus}$ salt*)

$AlInS_3$

IC-000200

Aluminium indium sulfide ($AlInS_3$)
Aluminium indium trisulfide
[72840-32-5]

$AlInS_3$

M 238.0
Struct. comprises network of AlS_4 tetrahedra sharing corners with InS_5 trigonal bipyramids. Synth. from $Al_2S_3 + In_2S_3$ by chem. vap. transport with I_2 at 800° to 750°. Light yellow hexagonal pyramids.

Schulte-Kellinghaus, M. *et al*, *Acta Crystallogr., Sect. B*, 1979, **35**, 3016 (*cryst struct*)

$AlKO_2$

IC-000201

Aluminium potassium oxide ($AlKO_2$)
Potassium aluminium oxide ($KAlO_2$). Potassium aluminate ($KAlO_2$)
[12003-63-3]

$KAlO_2$

M 98.0
Has $NaFeO_2$ struct. Synth. from Al_2O_3 and K_2CO_3 at 1200°. White solid. ΔH_f° −1141 kJ mol^{-1}. K_3AlO_3 and K_5AlO_4 also descr.

$AlKO_8S_2$

IC-000203

Aluminium potassium sulfate ($AlK(SO_4)_2$)
Sulfuric acid, aluminium potassium salt (2:1:1), 8CI. Anhydrous alum
[10043-67-1]

$KAl(SO_4)_2$

M 258.2
Struct. comprises alternate layers of six coordinate $Al^{3\oplus}$ and $K^{\oplus}$ with $SO_4^{2\ominus}$ between. Synth. by dehydration of the alum. Commercially available. Coagulating agent for rubber; also used in deodorants and waste water treatment. Colourless hexagonal plates (H_2SO_4). Sol. H_2O (7.74 g per 100 cm^3 at 30°); insol. EtOH. Corresp. $NH_4^{\oplus}$, $Rb^{\oplus}$, $Cs^{\oplus}$ salts also descr. ΔH_f° −2470 kJ mol^{-1}; ΔG_f° −2240 kJ mol^{-1}; S° 205 J K^{-1} mol^{-1}.
Dodecahydrate: [7784-24-9]. *Potassium alum. Kalinite. Hexaaquaaluminium(3+) hexaaquapotassium(1+) bis(sulfate). α-Alum*
$AlH_{24}KO_{20}S_2$ M 474.3
May be synth. from Al_2O_3, $H_2SO_4 + K_2SO_4$. Mineral. Mordant. Used in H_2O purif., paper sizing, dressing skins. Commercially available. Colourless cryst. (H_2O). Sol. H_2O (11 g per 100 cm^3 at 20°); insol. EtOH, Me_2CO. Mp 105°. Dec. on heating (−$9H_2O$ at 64.5°, −$12H_2O$ at 200°).
▷ WS5690000.

$AlKSe_2$ IC-000205

Aluminium potassium selenide ($AlKSe_2$)

Potassium diselenidoaluminate. Potassium diselenoxoaluminate(1–), 9CI

$K[AlSe_2]$

M 224.0
Struct. resembles $KGaTe_2$. Synth. from elements at 980°. Yellow translucent moisture-sensitive plates (melt).

Weis, J. *et al*, *Z. Naturforsch., B*, 1976, **31**, 1336 (*synth, props*)

$AlKTe_2$ IC-000206

Aluminium potassium telluride ($AlKTe_2$)

Potassium ditelluroxoaluminate(1–). Potassium ditelluridoaluminate

[61231-60-5]

$K[AlTe_2]$

M 321.2
Struct. resembles $Tl(I)Tl(III)Se_2$ struct. Synth. from elements at 980°. Brittle red moisture-sensitive plates (melt).

Weis, J. *et al*, *Z. Naturforsch., B*, 1976, **31**, 1336 (*synth, props*)

$AlLiO_2$ IC-000207

Aluminium lithium oxide ($AlLiO_2$)

[12003-67-7]

$LiAlO_2$

M 65.9
Commercially available. Related hydrates descr. Al may be replaced by Fe. $LiAl_5O_8$ also descr.

α-form
Low pressure-form
Tetragonal with 4-coordinate Al. Synth. from Li_2CO_3 + $Al(OH)_3$ or γ-Al_2O_3 at 600-700°. Deliquescent white solid. Forms mixed cryst. with spinel and β-quartz. ΔH_f° –1189.5 kJ mol^{-1}; S° 53.3 JK^{-1} mol^{-1} *cf.* Lithium aluminate ($Li_5(AlO_4)$), IC-000212.

β-form
Mid pressure-form
Monoclinic with 4- and 6-coordinate Al. Synth. from LiOH + Al_2O_3 at 1.8×10^4 atm. and 370° or from γ-Al_2O_3, Li_2CO_3 and K_2CO_3 at 450°.

γ-form
High pressure form
Hexagonal with 6-coordinate Al; isostructural with $NaHF_2$. From Li_2CO_3 + Al_2O_3 at 3×10^4 atm. and 850°. White solid.

$AlLiO_4Si$ IC-000208

Zeolite Li-A

$Li[AlSiO_4].H_2O$

M 126.0
Zeolite struct. ABW with 1D channels (340 × 380 pm across). Member of Phillipsite group. Synth. from silica gel, $Al_2O_3.3H_2O$ and LiOH at 250° for 36-60 hrs. or from metakaolin, silica and LiOH at 80-160°. Absorbs NH_3 but not N_2, propane. Rod like white cryst. Gallosilicate ABW also descr.

$AlLiO_4Si$ IC-000209

Spodumene

Triphane. Lithium aluminosilicate ($LiAlSi_2O_6$). Aluminium lithium silicate ($AlLiSi_2O_6$)

[1302-37-0]

$LiAl[Si_2O_6]$

M 186.0
A pyroxene. Mineral occurs in granite pegmatites. White cryst. (aq. melt), Mp 1430°. Several modifications and related lithium aluminosilicates descr.

Monoclinic-form
Mineral (Branchville USA). Mined for its Li content. Metasilicate struct. with Al and Li octahedrally coord. Varieties include Hiddenite (green) and Kunzite (pink) which are gemstones.

Tetragonal-form
Obt. by heating $Li_2O.Al_2O_3.4SiO_2$ glass. Related to Keatite (SiO_2) with Al replacing Si and Li in interstices.

Hexagonal-form
Obt. by heating $Li_2O.Al_2O_3.4SiO_2$ glass. Related to high quartz with Al replacing Si and Li in interstices.

[AlMo] IC-000214

Molybdenum-aluminium system

Aluminium molybdenum

Alloy. Several phases known including $Mo_{20}Al$, MoAl, $MoAl_7$. Liquid Al is v. reactive towards Mo owing to its solubility in the liquid phase.

Molybdenun aluminium (***$MoAl_3$***) [12043-36-6]
Transforms to $MoAl_5$.

Molybdenum aluminium (***$MoAl_4$***) [12380-24-4]
Al_4Mo M 203.8
Obt. from Mo and Al in the liquid state. Iron-grey to black cryst.

Molybdenum aluminium (***$MoAl_5$***) [12253-69-9]
Al_5Mo M 230.8
Hexagonal struct., isotypic with Al_5W. Obt. by reaction of liq. Mo and Al. Of interest as cathode for an electrolytic cell for Al production from melt.

Molybdenum aluminium (***$MoAl_{12}$***) [12043-94-6]
$Al_{12}Mo$ M 419.7
Bcc struct., isotypic with $Al_{12}W$. Obt. by reaction of Mo and Al, in the liq. state.

IC-000225

$AlNaSe_2$

Aluminium sodium selenide ($AlNaSe_2$)

Sodium diselenoxoaluminate(1–), 9CI. Sodium diselenidoaluminate

[61216-36-2]

$Na[AlSe_2]$

M 207.8

Struct. resembles Tl(*I*)Tl(*III*)Se_2. Synth. from elements at 980°. Pale yellow soft, air- and moisture-sensitive cryst. (melt).

Weis, J. *et al, Z. Naturforsch., B*, 1976, **31**, 1336 (*synth, props, cryst struct*)

IC-000226

$AlNaTe_2$

Aluminium sodium telluride ($AlNaTe_2$)

Sodium ditelluroxoaluminate(1–), 9CI. Sodium ditelluridoaluminate

[61216-37-3]

$Na[AlTe_2]$

M 305.1

Struct. resembles Tl(*I*)Tl(*III*)Se_2. Synth. from elements at 980°. Soft red, air- and moisture-sensitive plates (melt).

Weis, J. *et al, Z. Naturforsch., B*, 1976, **31**, 1336 (*synth, props, cryst struct*)

IC-000227

$AlNa_5O_4$

Sodium aluminate ($Na_5(AlO_4)$)

Pentasodium aluminate ($AlO_4^{5\ominus}$). Aluminium sodium oxide ($AlNa_5O_4$)

[54723-33-0]

$Na_5[AlO_4]$

M 205.9

Struct. contains isolated $[AlO_4]^{5\ominus}$ tetrahedra. Obt. from solid state reaction between Na_2O and Al_2O_3 at 700°. V. hygroscopic white solid.

Barker, M.G. *et al, J. Chem. Soc., Chem. Commun.*, 1981, 379 (*synth, cryst struct*)

IC-000228

$AlNbO_4$

Aluminium(*III*) niobium(*V*) oxide ($AlNbO_4$)

Aluminium niobate

[12258-25-2]

$AlNbO_4$

M 183.8

AlO_6 and NbO_6 octahedra share edges and corners. Synth. from Nb_2O_5 + Al_2O_3. Colourless plates (melt).

Pedersen, B.F., *Acta Chem. Scand.*, 1962, **16**, 421 (*synth, cryst struct*)

$AlO_2^{\ominus}$

Aluminate ($AlO_2^{\ominus}$) **IC-000229**

[20653-98-9]

$[AlO_2]^{\ominus}$

M 58.9 (ion)

May be species in dehydration of $Al(OH)_4^{\ominus}$ in presence of $Na^{\oplus}$. Detected by ms. ΔH_f^o (g) −582.8 kJ mol^{-1}.

Li salt: see *Aluminium lithium oxide ($AlLiO_2$)*, IC-000207

IC-000230

[AlO_2PSi]

Silicoaluminophosphate molecular sieves

SAPO

$(Si_xAl_yP_z)O_2$, x = 0.01-0.98, y = 0.01-0.6, z = 0.01-0.52; $x + y + z = 1$

A class of crystalline microporous framework oxides exhibiting at least 13 3D structures most of which are topologically related to the zeolites and aluminophosphates. Synth. hydrothermally from an org. amine + $Al_2O_3.nH_2O$ + phosphoric acid + silica sol. Cryst. Props. are related to both the zeolites and aluminophosphates.

AlO_4P **IC-000231**

Aluminium phosphate (1:1), 9CI, 8CI

Aluminium orthophosphate

[7784-30-7]

$AlPO_4$

M 121.9

Exists in various mineral and polymorphic forms. Forms acid salts with H_3PO_4, and intercalation compds. with e.g. organic bases. Forms basis of numerous microporous compositions with zeolitic character. A wide range of other elements may be incorporated. Employed as refractory material e.g. in binders and in bricks. With other metal oxides forms highly coloured materials useful as pigments. Employed in some dental and pharmaceutical prepns. Commercially available.

▷ TB6450000.

Sesquihydrate: [99835-04-8].
Sq. prismatic needles. Orthorhombic lattice with linked AlO_4 and PO_4 tetrahedra and $AlO_4(H_2O)_2$ octahedra and encapsulated H_2O.

Dihydrate: [13477-75-3].
Synth. from NaH_2PO_4, $AlCl_3$, NaOH aq., pH 3.8 at 60-90° → Variscite. $Al_2(SO_4)_3$ + Na_3PO_4 aq. at <135° → Metavariscite. Normally minute hexagonal plates.

Trihydrate: [22784-12-9].
Colourless, elongated hexagonal plates. Dehydrates at <400°, → cristobalite form.

Compd. with [NMe_4]OH: [104422-12-0]. *$AlPO_4$ - 12TMAU*
$C_4H_{13}Al_3NO_{13}P_3$ M 457.0

Obtained hydrothermally at 200°. White cryst.

Compd. with ethylenediamine (3:1) and 1H_2O: [96360-79-1].
$AlPO_4$21(en)
$C_2H_{10}Al_3N_2O_{13}P_3$ M 443.9
Obt. hydrothermally at 200°. White cryst. + 1H_2O.
Formulated as $Al_3(PO_4)_3(H_2NCH_2CH_2NH_2).H_2O$.

Compd. with pyrrolidine (3:1) and 1H_2O: [96360-80-4].
$AlPO_4$21(pyrrolidine)
$C_4H_{11}Al_3NO_{13}P_3$ M 454.9
Obt. hydrothermally at 150°. White prisms.

Compd. with piperidine hydrate: $AlPO_4$-17
Obt. from gel at 200°. Related to Erionite. Formulated as $Al_{18}(PO_4)_{18}.4(C_5H_{11}N.H_2O)$.

Clathrate with 1H_2O and 1 ethylenediamine: [98218-54-3].
$AlPO_4$-12(en)
$C_2H_{10}Al_3N_2O_{13}P_3$ M 443.9
Colourless cryst. (aq. melt).

Amorph.-form
Composition approximates to that of the trihydrate. Cryst. as berlinite at 525°.

Quartz-form
From Al_2O_3 + H_3PO_4; from Aluminium phosphate ($Al(H_2PO_4)_3$), IC-000188 at 1100-1300°, by dehydration of metavariscite at 240-800°; or from $NaAlO_2$ + H_3PO_4. Also obt. as mineral. Transparent prisms. The low-temp. α-form is transformed into the high-temp. β-form at 580-585°; the latter at >650° yields the high temp. tridymite form.

Tridymite-form
Hexagonal lattice. By dehydration of variscite at 900°; from $Al(NO_3)_3$ + Ammonium phosphate ($(NH_4)(H_2PO_4)$), IC-019726. The low-temp. and high-temp. forms interconvert 90°; the high temp. form being obt. from β-quartz form at 650°, and at >1000° yields the high temp. cristobalite form.

Cristobalite-form
Orthorhombic or cubic lattice with transformation at *ca* 100°. From the trihydrate at <400°. The high temp. tridymite form at >1000°→ high temp. cristobalite form (dec. at >1330°), which on cooling (189°) affords the low temp. cristobalite form. The transformation low→ high temp. cristobalite occurs at 208°. Mp >1600°.

Mineral-form [13769-32-9]
Berlinite
Essentially the anhydrous salt. With the α-quartz struct. Greyish to pale white, transparent to translucent, cryst. resembling quartz. Crysts. easily twin. Undergoes phase transition at 584°.

Mineral-form [14752-50-2]
Metavariscite
Essentially the dihydrate. Monoclinic cell in which the PO_4 tetrahedra share vertices with four $AlO_4(OH_2)_2$ octahedra, and vice-versa. The H_2O molecules are coordinated *cis*. P-O 152.8-154.2 pm, OPO 107.1-112.1°. Found in Tadzhikistan and the USA (Arkansas, Utah).

Mineral-form [13824-50-5]
Variscite
Essentially the dihydrate. Orthorhombic. Found in S. and W. Australia, Europe (Germany, Austria, Czechoslavakia), S. America (Venezuela, Columbia, Brazil) and southern regions of the USSR. Dipyramidal, colourless to pale green cryst. Dehydrates at 165° in single stage. When roasted at 900° consists mainly of the tridymite form with small amounts of berlinite.

Mineral-form
Richmondite
Essentially the tetrahydrate.

[AlU]

IC-000241

Aluminium uranium system

Main alloys are UAl_2, UAl_3, UAl_4. Used as fuel elements in high neutron-flux reactors, usually as Al-rich alloys.

Aluminium compd. with uranium (***1:4***) [12005-05-9]

Al_4U M 345.9

U has 13 Al nearest neighbours at 302-330 pm. Black needles or powder. Mp 730° dec. Dec. to UAl_3 + Al on heating. Obeys Curie-Weiss law between 293-923K (μ_{eff} = 3.2μ_B). Susceptibility temp. independent to 100K.

▷ Pyrophoric as powder.

Aluminium, compd. with uranium (***1:3***) [12004-79-4]

Al_3U M 318.9

Yellow solid. Mp 1350° dec. Prob. $AuCu_3$ struct. Dec. to UAl_2 + Al on heating. Obeys Curie Weiss law 293-1073K. μ_{eff} = 3.5μ_B.

▷ Pyrophoric as powder.

Aluminium compd. with uranium (***2:1***) [12004-48-7]

Al_2U M 291.9

$MgCu_2$ struct. U surrounded by 12 Al and 4 distant U. Mp 1590° (1620°). Paramagnetic. Obeys Curie-Weisslaw >100K. μ_{eff} = 3.0μ_B.

▷ Pyrophoric as powder.

Al_2BaS_4 IC-000248
Aluminium barium sulfide (Al_2BaS_4), 9CI
Barium thioaluminate ($Ba(Al_2S_4)$)
[51403-77-1]

$BaAl_2S_4$

M 319.5
Struct. has AlS_4 tetrahedra linked by corners and 12-coord. Ba. Cryst.

Eisenmann, B. *et al*, *Mater. Res. Bull.*, 1982, **17**, 1169 (*cryst struct*)

Al_2BaSe_4 IC-000249
Aluminium barium selenide (Al_2BaSe_4)
Barium diselenoxoaluminate(1−) (1:2)
[79470-80-7]

Al_2BaSe_4

M 507.1
Tetragonal struct. has $AlSe_4$ tetrahedra sharing corners with $BaSe_8$ antiprisms, struct. resembles TlSe. Synth. from $BaAl_2$ and Se at 1000°. Rectangular, beige, translucent moisture-sensitive cryst.

Klee, W. *et al*, *Z. Anorg. Allg. Chem.*, 1981, **479**, 125 (*cryst struct*)

Al_2BaTe_4 IC-000250
Aluminium barium telluride (Al_2BaTe_4)
Barium ditelluridoaluminate(1−) (1:2)
[39297-18-2]

$BaAl_2Te_4$

M 701.6
Structure has $AlTe_4$ tetrahedra which share corners with $BaTe_8$ antiprisms; struct. resembles TlSe. Synth. from stoichiometric amounts of the elements at 1200°. Red air- and moisture-sensitive prisms (from melt). $Ba_7Al_6Te_{16}$ also descr.

Franke, E.R. *et al*, *Z. Naturforsch., B*, 1972, **27**, 1308 (*synth, props*)

Al_2BeO_4 IC-000251
Beryllium aluminate (1:2), 10CI
Aluminium beryllium oxide, 8CI. Beryllium dialuminium oxide ($BeAl_2O_4$)
[12004-06-7]

$BeAl_2O_4$

M 126.9
One of two ($BeAl_2O_4$; $BeAl_6O_{10}$) congruently melting compounds of the BeO—Al_2O_3 system. Prepd. by sintering equimolar mixtures of BeO and Al_2O_3. White cryst. Mp 1873°, ΔH_f° −2301 kJ mol^{-1}; ΔG_f° −2179 kJ mol^{-1}; S° 66.3 J K^{-1} mol^{-1}.

▷ Highly toxic.

Mineral-form [1304-50-3]
Chrysoberyl
Gem variety is Alexandrite which is a component of tunable lasers. Orthorhombic cryst., may be yellow to greenish.

$Al_2Ca_{0.5}H_{20}NaO_{34}Si_5$ IC-000257
Faujasite
Zeolite ZSM-3
[12173-28-3]

$NaCa_{0.5}[Al_2Si_5O_{14}].10H_2O$

M 641.5
Zeolite struct. FAU of hexagonal prisms, 14-hedra and 26-hedra with intersecting circular (740 pm dia.) channels in three dimensions, with$(Si,Al—O)_{12}$ rings. Some Si may be replaced by P or Ge; Al may be replaced by Ga. See also zeolites X and Y. Also formulated as $Na_{12}Ca_{12}Mg_{11}[(AlO_2)_{58}(SiO_2)_{134}]260H_2O$. Rare sedimentary mineral. Hydrothermal deposits in cavities of massive rocks, found in Germany, Switzerland and California. Synth. from Al_2O_3-SiO_2-Me_4NOH gels at 80°. Forms inclusion compds. with small molecules used in separation of gases. Important industrial catalyst, e.g. for isomerisation of alkylbenzenes; support for Wacker catalyst. White solid. Stable, reversible hydration. Void vol. 0.47cm^3 cm^{-3}. Hardness 5. Various ion exchanged forms known, (e.g. Ba, Cs, K, Na). Zeolite ZSM-20 has similar props.

$CaAl_2O_4$

M 158.0
Stuffed tridymite struct. with Ca 6- or 9-coord. Used in ceramics and refractories and as support for transition metal and lanthanide phosphors. Commercially available. Microcryst. solid. Mp 1610°. ΔH_f° −2326.3 kJ mol^{-1} (298K); S° 114.2 J K^{-1} mol^{-1}. Related compds. $CaAl_{12}O_{20}$, $CaAl_4O_7$, $Ca_{12}Al_{14}O_{33}$ also descr.

$Al_2CaO_{12}Si_4$
Chabazite **IC-000263**
[12251-32-0]

$Ca(Al_2Si_4O_{12})$

M 398.3
Zeolite struct. CHA comprises columns of hexagonal prisms and 20 hedra giving rise to circular 3D channels 380 pm across of $(Si,Al{-}O)_8$ rings. Synth. from gel at 80°. Found as mineral in cavities in basalt, andesite, and other igneous rocks and as a recent deposit of certain hot springs (USA, Hawaii, Greenland, Ireland, Italy, Hungary, Australia, India, and elsewhere). White solid. Also known in various ion exchanged forms (Ag, K, Na, NH_4).

Al_2CaSe_4 **IC-000264**
Aluminium calcium selenide (Al_2CaSe_4)
Calcium diselenoxoaluminate(1−) (1:2)
[67847-61-4]

$CaAl_2Se_4$

M 409.8
Orthorhombic struct. has $AlSe_4$ tetrahedra sharing corners with $CaSe_8$ antiprisms. Struct. is related to TlSe. Synth. from elements at 1000°. Red, moisture-sensitive cryst.
Klee, W. *et al*, *Z. Naturforsch., B*, 1978, **33**, 829 (*cryst struct*)

$Al_2Ca_2FeHO_{13}Si_3$ **IC-000265**
Epidote, 9CI
Pistacite
[1318-49-6]

$Ca_2(Fe,Al)_3[SiO_4][Si_2O_7]O(OH)$ or $Ca_2[Al_2FeSi_3O_{12}(OH)]$

M 483.2
Mineral of the epidote group. If $Fe^{3\oplus}$ <15% (Fe + Al), the mineral is Clinozoisite. Mn replaces (Fe,Al) toward Piemontite. Struct. contains $[SiO_4]^{4\ominus}$ and $[Si_2O_7]^{2\ominus}$ with Al, Fe 6-coord. and Ca 8-coord. Common in contact zones and schists and an alteration product of feldspars. Minor gem stone. Yellowish green to brownish green prisms.

IC-000269

$Al_2Ca_3O_{12}Si_3$
Grossular
Grossularite
[1302-57-4]

$Al_2Ca_3(SiO_4)_3$

M 450.4
Garnet struct. in which AlO_6 octahedra and SiO_4 tetrahedra share corners. Dodecahedral coordn. at Ca. Often contains $Fe^{3\oplus}$ replacing Ca, and $Fe^{3\oplus}$ replacing Al. Mineral occurs as metamorphosed impure calcareous rock, especially in contact zones. Widespread in western USA, also found in Canada, Italy, USSR, Korea, Australia, Sri Lanka and Switzerland. Colourless cryst. (impurities give grey, yellow, green, brown, black cryst.) SiO_4 may be replaced by 4 OH to give hydrogarnets. $Al_2Ca_3(SiO_4)_3(OH)_{12}$. See Aluminium calcium hydroxide $[Al_2Ca_3(OH)_{12}]$. IC-000267.

Al_2CdTe_4
Aluminium cadmium telluride (Al_2CdTe_4)
[12421-31-7]

$CdAl_2Te_4$

M 676.7
Various modifications descr. including tetragonal $CdGa_2S_4$ struct. in which 3-coord. Te are ccp and Cd, Al are tetrahedral. Synth. from Al_2Te_3 and CdTe. Black solid.

Hahn, H. *et al.*, *Z. Anorg. Allg. Chem.*, 1955, **279**, 241 (*synth, powder struct*)
Chizhikov, V.I. *et al.*, *Phys. Status Solidi B*, 1981, **106**, 91 (*electrical props*)

IC-000275

$Al_2Cd_2Cl_8$
Cadmium(I) tetrachloroaluminate ($Cd_2(AlCl_4)_2$)
Dicadmium(2+) bis(tetrachloroaluminate(1−)). Aluminium cadmium chloride ($Al_2Cd_2Cl_8$)
[79110-87-5]

$Cd_2(AlCl_4)_2$

M 562.4
Struct. comprises slabs, stacked in [100] direction, consisting of ethane-like Cd_2Cl_6 units, sharing common vertices with $AlCl_4$ tetrahedra. Synth. from $Cd(AlCl_4)_2$ and excess Cd. V. moisture-sensitive colourless cryst. Dec. at 227° to Cd and $Cd(AlCl_4)_2$. Disproportionates in solvs. more basic than C_6H_6.

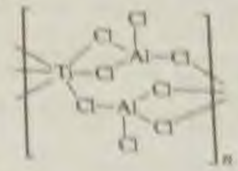
Al_2Cl_8Ti IC-000280
Tetra-μ-chlorobis(dichloroaluminium)titanium(II), 11Cl
Aluminium titanium chloride (Al_2TiCl_8), 10Cl. Titanium bis[tetrachloroaluminate(1−)]
[84556-32-1]



M 385.4
Polymeric. Can be oxidised electrochemically to Ti(III), then Ti(IV) in NaCl/$AlCl_3$ melts.

α-form
Chain struct. comprising hcp chlorine with Ti in O_h sites and Al in T_d sites in every other layer. Synth. from $AlCl_3$ and Ti metal at 225° for 1 month in a sealed quartz tube. Greenish-blue needles. Sol. hot C_6H_6, forming solvate.
▷ Potentially hazardous synth.

β-form
Synth. from α-form by subl. at 230-240° in a sealed quartz tube. Green cryst.

C_6H_6 solvate (1:1): [12312-06-0].
Synth. by adding a soln. of $TiCl_4$ in C_6H_6 to the product of heating Al + $AlCl_3$ to 140°, or by dissolving the α-form in C_6H_6 at 70° and slowly cooling to r.t. Catalyses alkylation of aromatics and polym. of α-olefins. Violet cryst. (C_6H_6).

Toluene solvate (1:1): [12287-52-4].
Synth. by reduction of $TiCl_4$ with Al + $AlCl_3$ in toluene. Catalyses cyclotrimerisation of butadiene, alkylation of aromatics and polym. of α-olefins. Violet solid (toluene).

[12726-00-0, 31174-61-3]

IC-000283

Al_2EuSe_4

Aluminium europium selenide (Al_2EuSe_4)

[11078-17-8]

Al_2EuSe_4

M 521.7
Prepd. by heating EuSe, Al and Se mixts. Cryst. Paramagnetic at 80-300K.

Blasse, G. et al., Bull. Soc. Chim. Fr., 1971, 747 (synth, cryst struct, magnetism)

IC-000284

$Al_2FeH_4O_{10}Si_2$

Ferrierpholite

[12321-46-7]

$FeAl_2[Si_2O_7](OH)_2$

M 330.0
Unbranched, single chain silicate (2 SiO_4 units per chain). Also formulated as $(Fe,Mg)Al_2Si_2O_7(OH)_2$. Mineral. Dark green to grey cryst.

MacGillavry, C.H. et al., Acta Crystallogr., 1950, 3, 272 (cryst struct)

Al_2FeO_4

Iron(II) aluminate ($FeAl_2O_4$)

[12068-49-4]

$FeAl_2O_4$

M 173.8
Spinel struct. Present in blast furnace slag. Formed at ceramic-steel interface. Absorbent for H_2S. Catalyst e.g. for oxidation of chloroethane waste gases. Component of coatings on glass-ceramics. Used in humidity sensors and in iron catalysts for NH_3 manuf. Solid.

Mineral-form [1302-61-0]
Hercynite
Black, opaque cryst.

Dickson, B.L. et al., Can. Mineral., 1976, 14, 206 (mössbauer)

$Al_2H_4I_2O_{14}Si_4$

Bikitaite

[12003-53-1]

$Li_2[Al_2Si_4O_{12}].2H_2O$

M 408.2
Zeolite struct. BIK, member of mordenite group. Struct. comprises puckered sheets of Al/SiO_4 tetrahedra linked through single tetrahedral chains giving 1D channels of 280 × 370 pm across. Mineral found in Li-rich pegmatites in Zimbabwe and North Carolina. Synth. from LiOH, $Al(OH)_3$ + H_2O at 300-350° and 2000 atm. Colourless cryst. Void fraction 0.23 $cm^3\ cm^{-3}$. Loses 7.5% H_2O at 230°.

$Al_2H_4Mg_2O_9Si$

Amesite, 9CI

[12413-43-3]

$Mg_2[Al_2O_3(SiO_4)].2H_2O$

M 278.6
Rare mineral. A septechlorite of the serpentine group. A 1:1 layer silicate with the maximum amount of tetrahedral and octahedral Al-substitution. Often contains Fe. Also formulated as $Mg_2Al(Si,Al)O_5(OH)_4$. First recorded at Chester, Mass, USA, also found in USSR and Canada. Pure compd. obt. by acid treatment of mineral at 550°. Pale green, translucent hexagonal plates.

IC-000294

$Al_2H_4O_7Si$

Imogolite

[12263-43-3]

$(HO)_3Al_2O_3Si(OH)$

M 198.0
Struct. comprises gibbsite sheet closed to form tube of ca. 2300 pm diameter and 10^4 - 10^7 pm long. Internal channel (ca. 820 pm across) normally occupied by H_2O. Variety of Allophane. Mineral widely distributed in

volcanic deposits. Formed from dil. soln. cont. Al and Si at pH 3.5–5. Possible catalyst for dehydration of alcohols. White solid. Forms pillared intercalation compd. with Na montmorillonite.

Aluminium hydrogen phosphate $Al_2O_3{\cdot}2P_2O_5{\cdot}9H_2O$

$Al_2[H_{1+2z}PO_4]_3(H_2O)_6[H_{3-3z}PO_4]$

M 547.9
Structure cont. PO_4 tetrahedra and aggregates of two AlO_6 octahedra linked by corners to two PO_4 tetrahedra. Synth. by slow cryst. of a soln. of $Al^{3\oplus}$ in 85% H_3PO_4 ($Al:PO_4$ 1:3). Colourless trigonal pyramids (H_2O).

Kneip, R. *et al, Z. Naturforsch., B*, 1979, **34**, 750 (*synth, cryst struct*)

Al_2HgS_4 IC-000304
Aluminium mercury sulfide (Al_2HgS_4)
[12359-81-8]

$HgAl_2S_4$

M 382.8
Low pressure phase has tetragonal $CdGa_2S_4$ struct.: 3-coord. S are ccp and Al, Hg are tetrahedral. High pressure spinel phase also known. Synth. from HgS and Al_2S_3. Black solid. Band gap 2.54 eV.

Hahn, H. *et al, Z. Anorg. Allg. Chem.*, 1955, **279**, 241 (*synth, powder struct*)
Range, K.J. *et al, Z. Naturforsch., B*, 1968, **23**, 1009 (*high press form*)

Al_2HgSe_4 IC-000305
Aluminium mercury selenide (Al_2HgSe_4)

$HgAl_2Se_4$

M 570.3
Low pressure phase has tetragonal $CdGa_2S_4$ struct.: 3-coord. S are ccp and Al, Hg are tetrahedral. High pressure spinel phase also known. Synth. from Al_2Se_3 + HgSe. Black solid.

Hahn, H. *et al, Z. Anorg. Allg. Chem.*, 1955, **279**, 241 (*synth, powder struct*)
Range, K.J. *et al, Z. Naturforsch., B*, 1968, **23**, 1009 (*cryst struct*)

Al_2HgTe_4 IC-000306
Aluminium mercury telluride (Al_2HgTe_4)

$HgAl_2Te_4$

M 764.9
Statistical distribution of Hg and Al over metal sites in tetragonally distorted zinc blende lattice. Black solid.

Hahn, H. *et al, Z. Anorg. Allg. Chem.*, 1955, **279**, 241 (*synth, powder struct*)

$Al_2I_7^\ominus$ IC-000307
Heptaiododialuminate(1−)
μ-Iodohexaiododialuminate(1−)
[12588-50-0]

$[I_3AlIAlI_3]^\ominus$

M 942.2 (ion)
Li salt: Aluminium lithium iodide (Al_2LiI_7)
From $LiAlH_4$ + HI in C_6H_6. Colourless moisture-sensitive cryst. Insol. alkanes, dioxan, CS_2, spar. sol. Py; sol. Et_2O, DMSO, MeCN. Mp 220°. Monomeric in C_6H_6.
Na salt: Aluminium sodium iodide (Al_2NaI_7)
Al_2I_7Na M 965.2

Colourless moisture-sensitive solid. $NaAl_2I_{10}$ also descr. *Cs salt:* [12377-06-9]. *Aluminium caesium iodide* (Al_2CsI_7)

Al_2CsI_7 M 1075.2
Colourless moisture-sensitive solid. Mp 205°.

Al_2Li_3 IC-000308

Aluminium compd. with lithium (2:3), 9CI

Aluminium lithium (Al_2Li_3). *Lithium aluminium* (Li_3Al_2)

[51846-18-5]

Al_2Li_3

M 74.7
Struct. has layers Al_n of puckered 6-membered rings with Li's between. Synth. from elements at 600°. Hard brittle grey moisture-sensitive solid alloy. Mp 520°.

Tebbe, K.-F. *et al*, *Z. Naturforsch., B*, 1973, **28**, 600 (*phase diagram, synth, cryst struct*)
Selman, J.R. *et al*, *J. Electrochem. Soc.*, 1977, **124**, 1160 (*thermodyn*)

Al_2MgO_4 IC-000309

Aluminium magnesium oxide (Al_2MgO_4)

Magnesium aluminate. Magnesium dialuminium oxide

[12068-51-8]

$MgAl_2O_4$

M 142.2
Structural prototype. Prepd. either from MgO + Al_2O_3 in PbF_2 at 1160-1290° or by reaction of $MgCl_2$ and Al(OAc)$_3$ at 1400°. Adsorbent for removing surfactants from H_2O. Catalyst. Support for transition metal and lanthanide phosphors. Colourless cubic cryst. Mp 1775°, Mp 2030-2060°. ΔH_f° −2299 (−2306) kJ mol^{-1}; ΔG_f° −2177 kJ mol^{-1}; S° 89 (81) J K^{-1} mol^{-1}. n_D 1.727. Forms mixed cryst. with $LiAlO_2$ and β-quartz. Not attacked by common acids or NaOH. Sl. etched by HF.

Mineral-form [1302-67-6]

Spinel

Parent of a large group of cubic mixed oxides of formula AB_2O_4. Common metamorphic mineral. May be various shades of red, blue, green, brown or black.

$MgAl_2Te_4$ IC-000310

Aluminium magnesium telluride ($MgAl_2Te_4$)

[56831-86-8]

$MgAl_2Te_4$

M 588.6
Distorted defect zinc blende struct. Synth. from elements at 650-1000°. Red v. air- and moisture-sensitive cryst.

Dotzel, P. *et al*, *Z. Naturforsch., B*, 1975, **30**, 179 (*synth, cryst struct*)

$Al_2Mg_2O_{11}Si_3$ IC-000311

Simaldrate, INN

Tris[metasilicato(2−)]dioxodimagnesium(1:2) aluminate(4−), 9CI. Silodrate, USAN. Aluminosilicic acid magnesium salt. MP 1051

[12408-47-8]

M 362.8
Antacid. Fine white powder.

U.K. Pat., 1 153 513, (1969); *CA*, **71**, 126618s (*synth*)
Schnekenburger, J., *Arzneim.-Forsch.*, 1974, **24**, 142 (*pharmacol*)

$Al_2Mg_3O_{12}Si_3$ IC-000312

Pyrope

[1302-68-7]

$Al_2Mg_3[SiO_4]_3$

M 403.1
Magnesium aluminium silicate garnet. Can have Mg replaced by $Fe^{2\oplus}$ toward Almandine and by Mn toward Spessartine and Al replaced by $Cr^{3\oplus}$ toward Knorringite. Mineral which occurs in peridotites and associated serpentinites. A high-pressure phase in the system $MgO/Al_2O_3/SiO_2/H_2O$. Gemstone and abrasive. Cubic light pink or red cryst. May also be blue/green or violet.

$Al_2Mg_5Se_8$ IC-000313

Aluminium magnesium selenide ($Al_2Mg_5Se_8$)

Magnesium tetraselenoxoaluminate (5:2), 10CI

[65888-56-4]

$Al_2Mg_5Se_8$

M 807.1

Struct. is related to olivine and Li_3PO_4 with Mg in octahedral coordination and tetrahedral Al. Synth. from elements at 1000°. Almost colourless translucent moisture-sensitive cryst.

Dotzel, K.-P. *et al*, *Z. Naturforsch., B*, 1977, **32**, 1488 (*synth, cryst struct*)

Al_2MnO_4 IC-000314

Aluminium manganese oxide (Al_2MnO_4), 11CI

[12068-52-9]

$MnAl_2O_4$

M 172.8
Cubic spinel struct. Synth. from MnO and Al_2O_3 at 1000° in absence of O_2. Colourless solid. Antiferromagnetic below $T_N \simeq 18.5$K.

Greenwald, S. *et al*, *J. Chem. Phys.*, 1954, **22**, 1597 (*synth, magnetism*)

Al_2MnS_4 IC-000315

Aluminium manganese(*II*) sulfide (Al_2MnS_4), 11CI

[12522-87-1]

$MnAl_2S_4$

M 237.1
Prepd. from elements at 600-1000°. Golden yellow cryst.

I-form

Stable-form

Rhombohedral modification.

II-form

Spinel struct. stable at high pressures.

$Al_2Mo_3O_{12}$ IC-000316

Aluminium molybdenum oxide ($Al_2Mo_3O_{12}$)

Aluminium molybdate ($Al_2(MoO_4)_3$)

[15123-80-5]

$Al_2(MoO_4)_3$

M 533.7
Isostructural with $Fe_2(MoO_4)_3$ and $Cr_2(MoO_4)_3$. Monoclinic, interatomic distances, O—Al 188, O—Mo 169.8-181.2 pm. Prepd. by precipitation from Al salts and molybdic acid and subsequent calcining or from Al_2O_3 and MoO_3 in a Pt crucible at 700°. Commercially available. White powder. Mp 940-965°.

Plyasova, L.M. *et al*, *Izv. Akad. Sci. USSR, Ser. Sci. Khim.*, 1967, **3**, 906; *CA*, **69**, 55156k (*synth*)

Al_2NNb_3 IC-000317

Aluminium niobium nitride (Al_2Nb_3N), 11CI

Triniobium dialuminium nitride

[12004-34-1]

Al_2Nb_3N

M 346.6
β-Manganese struct. The only stable ternary phase in the Al-Nb-N_2 system. It is stable in the range 1000-1500° and melts congruently. Synth. by heating a Nb/Al alloy with AlN.

Jeitschko, W. *et al*, *Monatsh. Chem.*, 1964, **95**, 1212 (*synth, cryst struct*)
Schuster, J.C. *et al*, *Z. Metallk.*, 1985, **76**, 728 (*synth, cryst struct, phase diagram*)

$Al_2Na_2O_{48}Si_{22}$ IC-000318

Zeolite Theta-1

$Na_n[Al_nSi_{24-n}O_{48}] \sim 4H_2O$, $n < 2$

M 1485.7
Limiting formula given. Zeolite struct. TON with 1D - channels 440 × 550 pm across and $(AlSi—O)_{10}$ rings. Synth. from $Na_2O—Al_2O_3—SiO_2—H_2O—H_2N(CH_2)_nNH_2$ gels at 180°. Has applications involving shape-selective adsorption. Colourless microcryst rods (aq. melt). ZSM-22, ZSM-23 (Zeolite struct MTT), Zeolite Nu-10 are similar.

IC-000321

Al_2O_3

Aluminium oxide (Al_2O_3)

Alumina. Alundum. Aloxite

[1344-28-1]

Al_2O_3

M 101.9

Commercially available. White solid. Sol. hot NaOH.

▷ BD1200000.

Hydrate: [12043-15-1]. ***Akdalaite***
Mineral from Kazakhstan, USSR. White translucent cryst.

α-form [1302-74-5]
Corundum. Emery
High temp. modification, indefinitely metastable at r.t. Structural prototype comprising hcp oxide with Al in O_4 holes; solid solns. with small amounts of M_2O_3 give rise to various gem varieties. Mineral of haematite group of widespread occurrence or may by synth. from γ-form or any hydrous oxide ⩽450°. Gem quality corundum known as White sapphire. Abrasive. Transparent cryst; v. hard, resistant to attack by acids. Mp 2323°. ΔH_f° *ca.* −1682 kJ mol^{-1}; S° 50.9 JK^{-1} mol^{-1}; E_g > 5 eV.

▷ GN0231000.

Mixed oxide with Cr_2O_3: [12174-49-1]. ***Ruby***
Occurs naturally or may be synth. from NH_4 (Al,Cr) alums at 1450°. Used in lasers and masers; gem. Brilliant red cryst. Red colour imparted by 1-4% Cr_2O_3.

Mixed oxide with Fe, Ti: [1317-82-4]. ***Sapphire. Blue sapphire***
Gem. Transparent blue cryst.

β-form
Not a simple polymorph. Always contains alkali metal cations: see *Aluminium sodium oxide* ($Al_{11}NaO_{17}$), IC-000395 and *β″ alumina* Al_2NaO_4.

γ-form
Defect spinel struct. Li required. Stabilised by AlN. White solid; readily takes up H_2O and dissolves in acids. Forms on oxidised Al surfaces.

Surface film-form
Has defect NaCl struct. Protects Al surfaces from oxidation.

Al_2O_4Zn IC-000324

Aluminium zinc oxide (Al_2ZnO_4)

Zinc aluminate ($ZnAl_2O_4$)

[12068-53-0]

$ZnAl_2O_4$

M 183.3

Spinel-type struct. Pigment; abrasive; used in glass ceramics; in anti-corrosion coatings; moisture sensors; catalyst for oxidations of organics, aromatisation, dehydrogenation; catalyst in hydrogenation cracking and in reforming hydrocarbons. Used in screen printable dielectric compds. for printed circuits. Cryst.

Al_2O_5Si IC-000325

Andalusite

[12183-80-1]

Al_2SiO_5

M 162.0

Struct. comprises chains of distorted AlO_6 octahedra sharing edges, SiO_4 tetrahedra and pairs of edge-sharing AlO_5 trigonal bipyramids. Occurs chiefly in slates and argillaceous schists as a contact mineral. Found in USA, Canada, Brazil, Spain, USSR, Korea, Australia and elsewhere. Refractory in steel industry. Cryst. various colours usually pink, redish brown, rose red. See also Kyanite, IC-000326.

Al_2O_5Si IC-000327

Sillimanite

[12141-45-6]

Al_2SiO_5

M 162.0

Struct. contains double chains of SiO_4 and AlO_4 tetrahedra sharing corners and octahedrally coordinate Al between. Isomorphous replacement Al by Fe. Obt. from fused oxides. Mineral in sands and metamorphic rocks. Ceramic component, refractory, molding sand, cracking and isomerisation catalyst. White solid. Mp 1816°. ΔH_f° −2584.4 kJ mol^{-1}. Thermal cond. 1.59 W K^{-1} m^{-1}. Thermal exp. 5.4 × 10^{-6}.

$Al_2O_{12}S_3$ IC-000328

Aluminium sulfate ($Al_2(SO_4)_3$)

$Al_2(SO_4)_3$

M 342.1

Obt. from hydrates at 325°. Used in water purif. (flocculant). Size for paper. Commercially available. White solid. Forms complex series of hydrates. Dec. at 450° to amorphous Al_2O_3 with high surface area. $\Delta H_{f\,298}^\circ$ −3435 kJ mol^{-1}. $Al(HSO_4)_3$ also known.

17 Hydrate: ***Alunogen***
Mineral, occurs mainly as an efflorescence or cavity filling in slates and shales. Colourless cryst.

18 Hydrate: [7784-31-8].
Obt. from bauxite or clay + H_2SO_4. Colourless hygroscopic cryst. (H_2O). Exact amount of H_2O uncertain. Gives anhydrous salt during 24h at 380°.

Sodium alum: see *Aluminium sodium sulfate* ($AlNa(SO_4)_2$), *IC-000223*

Potassium alum: see *Aluminium potassium sulfate* ($AlK(SO_4)_2$), *IC-000203*

Al_2PbSe_4 IC-000331

Aluminium lead selenide (Al_2PbSe_4)

[11078-40-3]

Al_2PbSe_4

M 577.0

Prepd. by heating PbS, Al and Se mixts. Cryst.

Eholie, R. *et al*, *Bull. Soc. Chim. Fr.*, 1971, 747 (*synth*)
Klee, W. *et al*, *Mater. Res. Bull.*, 1980, **15**, 1033 (*cryst struct*)

Al_2S_3 IC-000332

Aluminium sulfide (Al_2S_3)

[1302-81-4]

Al_2S_3

M 150.1

Commercially available. Moisture-sensitive white cryst. (melt). Mp 1100° (1240°). E_g 4.1 eV (300K); ΔH_f° −726 kJ mol^{-1}

Monoclinic-form

α-form

Distorted wurtzite struct. From the elements at 700-1000°. Moisture-sensitive colourless cryst.

Cubic-form

Cation deficient spinel struct. which is stabilised at ambient pressure by inclusion of ~2% As. Formed from elements at 400° and 4 × 10^4 atm. Colourless moisture-sensitive cryst.

Tetragonal-form

Has spinel struct. similar to β-In_2S_3. Obt. from elements at 2-65 × 10^3 atm. at 1000°. Yellow orange v. moisture-sensitive cryst. Semiconductor, E_g 0.3 eV; conductivity 10^{-7} Ω^{-1} m^{-1} at 25°.

Hexagonal β-form

Obt. from elements in presence of Al_4C_3 at 1000-1100°. Has disordered wurtzite struct.

Hexagonal γ-form

Has α-Al_2O_3 struct. Stable between 1000-1100°.

Al_2S_4Sr IC-000333

Aluminium strontium sulfide (Al_2SrS_4)

Strontium thioaluminate

[11078-41-4]

Al_2SrS_4

M 269.8

Prepd. by heating SrS, Al and S mixts. Cryst.

Eholie, R. *et al*, *Bull. Soc. Chim. Fr.*, 1971, 747 (*synth, cryst struct*)

Al_2S_4Zn IC-000334

Aluminium zinc sulfide (Al_2ZnS_4)

[12271-58-8]

$ZnAl_2S_4$

M 247.6

α-form has cubic spinel struct., β-form hexagonal wurtzite superlattice and γ-form has rhombohedral defect $ZnIn_2S_4$ struct. Spinel form may be converted to wurtzite struct. >1000°. Synth. from ZnS, Al and S at 800°. Colourless cryst. Slow reaction with moist air → H_2S. Sr, Pb, Cr, Mn, Fe, Cd and Hg analogues also descr.

Al_2Se_4Sr IC-000337

Aluminium strontium selenide (Al_2SrSe_4)

[11078-42-5]

$SrAl_2Se_4$

M 457.4

Possesses orthorhombic struct. related to TlSe with 4-coord. (T_d) Al and 8-coord. (square antiprismatic) Sr. Synth. from SrSe, Al and Se at 800°. Red moisture-sensitive cryst. Pb and Eu compds. also descr.

Eholie, R. *et al*, *Bull. Soc. Chim. Fr.*, 1971, 747 (*synth, powder struct*)
Klee, W. *et al*, *Z. Naturforsch., B*, 1978, **33**, 829 (*cryst struct*)

Al_2Se_4Zn IC-000338

Aluminium zinc selenide (Al_2ZnSe_4)

[12359-83-0]

$ZnAl_2Se_4$

M 435.1

Low pressure phase has tetragonal $CdGa_2S_4$ struct.: 3-coord. S are ccp and Al, Zn are tetrahedral. High pressure spinel phase also known. Synth. from Al_2Se_3 + ZnSe. Black solid.

Hahn, H. *et al*, *Z. Anorg. Allg. Chem.*, 1955, **279**, 241 (*synth, powder struct*)
Range, K.J. *et al*, *Z. Naturforsch., B*, 1968, **23**, 1009 (*cryst struct*)

Al_2SrTe_4 IC-000339

Aluminium strontium telluride (Al_2SrTe_4)

[39297-20-6]

Al_2SrTe_4

M 651.9

Struct. resembles TlTe. Synth. from elements. Bright red prisms (melt).

Franke, E. *et al*, *Z. Naturforsch., B*, 1972, **27**, 1308.

Al_2Te_4Zn IC-000340

Aluminium zinc telluride (Al_2ZnTe_4)

[12421-34-0]

Al_2ZnTe_4

M 629.7

Al and Zn are statistically distributed over metal sites in tetragonally distorted zinc blende lattice. Black solid.

Hahn, H. *et al*, *Z. Anorg. Allg. Chem.*, 1955, **279**, 241 (*synth, powder struct*)

$Al_{2.3}H_2K_{0.9}Mg_{0.3}O_{12}Si_{3.4}$ IC-000341

Illite

[12173-60-3]

$K_{0.9}[Mg_{0.3}Al_{1.7}(Al_{0.8}Si_{3.4}O_{10})(OH)_2]$

M 394.0

Non-expanding clay mineral derived from Muscovite, IC-000351 by replacement of tetrahedral Al by Si and octahedral Al by Mg. Many variations in formulae. May be made hydrothermally from ammonium luminosilicate gels. Used in ceramics. Dull white solid; may also show various pale colours. Cation exchange capacity 0.2-0.4 eq kg^{-1}.

$Al_3ClNa_4O_{12}Si_3$ IC-000344

Sodalite

[1302-90-5]

$Na_6[Al_6Si_6O_{24}].2NaCl$

M 484.6

Zeolite struct. SOD. Parent of a group of cubic alumino silicates having general formula $(Na,Ca)_{4-8}Al_3Si_6(O,S)_{24}(SO_4,Cl,OH)$. 'Sodalite cages', comprising stacked 14-hedra (truncated octahedra) with apertures formed by $(Al,Si—O)_6$ rings, are commonly found in other zeolites (Zeolite A, etc.). Widely distributed mineral (incl. var. Hackmanite); hydrothermal synth. from aluminosilicate gels in presence of NaOH and $[Me_4N]OH$. White cryst. Mineral samples show various colours. n_D 1.483.

Chloride form:
$Al_6Cl_2Na_8O_{24}Si_6$ M 969.2
Mineral from Ontario, Canada. White solid.

Hydroxide form: Basic sodalite
$Al_6H_6Na_8O_{28}Si_6$ M 968.3
Made hydrothermally at 450° and 1.53×10^7 atm. Adsorbant for small molecules. Dodecahedral white cryst.

Sulfate form: Nosean. Noselite
$Al_6Na_8O_{28}SSi_6$ M 994.3

Ultramarine: [1317-97-1].
$Al_6Na_8O_{24}S_4Si_6$ M 1026.5
Contact metamorphic mineral Lapis lazuli (Lazurite) formulated as $(Na,Ca)_8(Al,Si)_{12}O_{24}[SO_4Cl_2(OH)_2]$. A related mineral is Hauyne or Hauynite which is also blue but formulated $(Na,Ca)_{4-8}Al_6Si_6(O,S)_{24}(SO_4,Cl)_{1-2}$. Synth. from kaolinite, S, NaOH + coke at 800°. Hydrothermal synth. at 410° and 5.5×10^5 atm. Pigment. Lapis lazuli used as gemstone. Blue cryst. Related green, violet and red substances cont. different S-cont. spp. also descr. Zeolite struct. SOD cont. $S_2^{\ominus}$ and $S_3^{\ominus}$ radical ions.

Me_4N form:
$C_4H_{12}AlNO_{12}Si_5$ M 433.5
From $(Me_4N)OH$, $Si(OMe)_4$, $Al(OPr^i)_3$ and H_2O at 100° then 180°. White cryst. (aq. melt).

Non-basic form:
$Al_3Na_3O_{12}Si_3$ M 426.1
White solid. Sodalite hydrates obt. from hydroxy form at 127°; anhydrous form by subsequent dehydration.

IC-000345

$Al_3Cl_{12}Dy$

Hexa-μ-chlorotris(dichloroaluminium)dysprosium, 12Cl

Aluminium dysprosium chloride (Al_3DyCl_{12}). Dysprosium tris[tetrachloroaluminate(1−)]

[130725-68-7]

$DyAl_3Cl_{12}$

M 668.8
Similar compds. formed by other Ln. Antiprismatic struct. Involved in thermal vapour transport of $LnCl_3$ with $AlCl_3$; precursor in prepn. of pure $LnCl_3$. Colourless cryst. Dec. to $DyCl_3$ on heating.

Hake, D., *Z. Anorg. Allg. Chem.*, 1990, **586**, 99 (*synth, cryst struct*)

IC-000346

$Al_3Cl_{12}Ho$

Hexa-μ-chlorotris(dichloroaluminium)holmium, 10Cl

Holmium tetrachloroaluminate ($Ho(AlCl_4)_3$)

[123776-17-0]

$Ho[AlCl_4]_3$

M 671.3
$HoCl_8$ square antiprisms are linked via edges with $AlCl_4$ tetrahedra. Synth. from Ho_2O_3 + $AlCl_3$ by chem. vap. transport. Salmon-coloured air- and moisture-sensitive cryst. (from vap.). Similar Sm and Nd compds. descr. in gas phase.

Oøye, H.A. *et al*, *J. Am. Chem. Soc.*, 1969, **91**, 2229 (*Nd analogue*)
Papatheodorou, G.N. *et al*, *Inorg. Chem.*, 1979, **18**, 385 (*Sm analogue*)
Hake, D. *et al*, *Angew. Chem., Int. Ed. Engl.*, 1989, **28**, 1364 (*cryst struct*)

IC-000347

$Al_3Cl_{12}Nd$

Neodymiumhexa-μ-chlorohexachlorotrialuminium

Aluminium neodymium chloride (Al_3NdCl_{12}). Tris(tetrachloroaluminato)neodymium

[12408-49-0]

$NdAl_3Cl_{12}$

M 650.6
Formed in the vapour phase by vaporisation of solid $NdCl_3$ in the presence of Al_2Cl_6 gas.

[63643-30-1]

Oye, H.A. *et al*, *J. Am. Chem. Soc.*, 1969, **91**, 2229 (*formn, themodyn*)

IC-000348

$Al_3Cl_{12}Sm$

Samariumhexa-μ-chlorohexachlorotrialuminium

Aluminium samarium chloride (Al_3SmCl_{12}). Tris(tetrachloroaluminato)samarium

[68645-74-9]

$SmAl_3Cl_{12}$

M 656.7

Formed in the vapour phase by vaporisation of solid $SmCl_3$ in the presence of Al_2Cl_6 gas.

Papatheodorou, G.N. *et al*, *Inorg. Chem.*, 1979, **18**, 385 (*formn, thermodyn*)

IC-000349

$Al_3CsNa_2O_{24}Si_9$

Zeolite rho

$(Na,Cs)_{12}[Al_{12}O_{96}Si_{36}].n\ H_2O$

M 896.5
Zeolite struct. RHO. Member of faujasite group. Struct. comprises 2 non-intersecting 3-D interpenetrating channel structs. (360 pm diameter) of zeolite A type. A 26 hedron is linked by octagonal prisms through each of its 6 $(Al,Si—O)_8$ rings to an $(Al,Si—O)_8$ ring of 6 other 26 hedra. $Na^{\oplus}$, $Cs^{\oplus}$ may be replaced by $NH_4^{\oplus}$, $Ca^{2\oplus}$ etc. with considerable framework distortion. Synth. from aq. NaOH, CsOH, $Al(OH)_3$ and SiO_2 at 60-120°.

U.S. Pat., 3 720 753, (1973); *CA*, **79**, 33220 (*synth*)
Parise, J.B. *et al*, *J. Phys. Chem.*, 1984, **88**, 1635, 2303 (*nd*)

IC-000350

$Al_3F_{14}Na_5$

Pentasodium trialuminium fluoride ($Na_5Al_3F_{14}$)

Tetradecafluorotrialuminate(5−), sodium salt, 8CI

[12068-55-2]

$Na_5Al_3F_{14}$

M 461.8
Tetragonal struct. comprises $Na^{\oplus}$ cations and an $(Al_3F_{14})_n^{5n\ominus}$ layer anion. Synth. by heating a stoichiometric mixture of NaF and AlF_3 (5:3) at 800°. Alternatively produced by reaction of HF with 50% aq. suspension of $Al(OH)_3$ and neutralisation of product with Na_2CO_3. Flux in welding. Colourless tetragonal cryst. ΔH_f° −7581 kJ mol^{-1}; ΔG_f° −7200 kJ mol^{-1}; S° 483.5 J K^{-1} mol^{-1}. Dec. on heating in a peritectic reaction (737°) forming Na_3AlF_6 and liq. of approx. composition 40 mol % AlF_3.

▷ Corrosive; toxic.

Mineral-form [1302-84-7]
Chiolite
Found assoc. with Cryolite in Greenland. Minute cryst.

IC-000351

$Al_3H_2KO_{12}Si_3$

Muscovite

Common mica. White mica

[1318-94-1]

$K[Al_2(OH)_2Si_3AlO_{10}]$

M 398.3
Mica having double layers with $Al(O,OH)_6$ octahedra between layers of $(Si,Al)O_4$ tetrahedra. $K^{\oplus}$ between double layers. May be made hydrothermally from ammonium aluminosilicate gels. Occurs abundantly as mineral. Colourless plates. Electrical and thermal insulator: used in the manuf. of electrical apparatus. n_D 1.558, 1.594, 1.598.

$Al_3H_3O_{11}P_2$

Aluminium hydroxide phosphate ($Al_3(OH)_3(PO_4)_2$)

[117944-52-2]

$Al_3(OH)_3(PO_4)_2$

M 321.9

Mineral-form [1319-40-0]
Wavellite
Essentially the pentahydrate. Orthorhombic lattice. Alternatively formulated as $Al_3(PO_4)_2(OH,F)_3.5H_2O$. Occurs widely in USA, Brazil, S. Australia; also found in UK, USSR. Easily sol. aq. acids and alkalis. Easily loses H_2O at <200°. Stout, long and brittle. White to greenish-white to green, also yellowish-green to yellow and yellowish-brown, brown to brownish-black prisms.

Mineral-form
Metakingite
Essentially the tetrahydrate.

Mineral-form [12418-34-7]
Kingite
Essentially the nonahydrate. Possibly possesses a kaolinite struct. Alternatively formulated as $Al_3(PO_4)_2(OH,F)_3.9H_2O$. Found at various locations in Australia. White triclinic cryst.

[64535-89-3]

Dana's System of Mineralogy, 7th Ed., Wiley, NY, 1951, 961, 962, 965.

IC-000353

$Al_3H_4NaO_{12}P_2$

Brazilianite

Aluminium sodium hydroxide phosphate ($Al_3Na(OH)_4(PO_4)_2$)

[12004-65-8]

$NaAl_3(PO_4)_2(OH)_4$

M 361.9
Struct. contains chains of edge-sharing AlO_6 octahedra linked by PO_4 tetrahedra with Na in framework cavities. Mineral. White solid.

Dihydrate: Wardite. Cyrilovite
$Al_3H_8NaO_{14}P_2$ M 397.9
White or coloured cryst. depending on impurities.

Gatehouse, B.M. *et al*, *Acta Crystallogr., Sect. B*, 1974, **30**, 1311 (*cryst struct*)
Hill, F., *Z. Naturforsch., A*, 1978, **33**, 1484 (*esr*)

IC-000354

$Al_2H_6KO_{14}S_2$

Alunite

Potassium hexahydroxybis[sulfato(2−)]trialuminate(1−)

[1302-91-6]

$K[Al_3(OH)_6][SO_4]_2$

M 414.2

Al is coord. by 4OH (at shared corners of AlO_6 octahedra) and $2[SO_4]^{2\ominus}$. Also formulated as $K[Al_3O_3(SO_4)_2].3H_2O$. Obt. from Aluminium sulfate ($Al_2(SO_4)_3$), IC-000328 and aq. KOH. Widely distributed mineral formed by sulfotarız processes on volcanic rocks. Resource for both K and Al. Component of cement. Used in water softening. White cryst. (H_2O). Often discoloured greyish, yellowish, reddish. Na, NH_4, Rb derivs. also descr. Related minerals known with S replaced by P and K by Sr or Ba. Piezoelectric.

Al_4Li_9

Aluminium compd. with lithium (4:9) IC-000368

Aluminium lithium (Al_4Li_9). Lithium aluminium (Li_9Al_4). Alumtnium compd. with lithium (1:2) (incorr.)

[12253-44-0]

Al_4Li_9

M 170.3

Formerly descr. as Li_2Al. Struct. has zig-zag Al_n chains with Li's between. Each atom has coord. no. 14. Synth. from the elements at 500°. Moisture sensitive cryst. (melt).

Hansen, D.A. *et al, Acta Crystallogr., Sect. B*, 1968, **24**, 913 (*cryst struct*)

$Al_4Na_4O_{18}Si_5$

Zeolite X IC-000369

$Na_4[Al_4Si_5O_{18}]$

M 628.3

Zeolite struct. FAU with Si:Al 1-1.5. Important synthetic zeolite, aluminous form of Faujasite, IC-000257. Many ion exchanged forms known (Ag, Ba, Ca, Ce, Cu, Hg, Na, Pb, Tl etc.). Synth. from aq. $NaAlO_2$, sodium silicate, SiO_2 and NaOH at 20-120°. Ion exchanger; shape-selective catalyst; drying agent. Host for alkali metal clusters. Stable white solid; reversibly dehydrates. Void volume 0.5 cm^3cm^{-3}.

Offretite IC-000376

[12417-81-1]

$(Ca,Mg)_{1.5}K[Al_4Si_{14}O_{36}].14H_2O$ or
$(K_2,Ca,Mg)_{2.5}[(AlO_2)_5(SiO_2)_{13}].15H_2O$

M 1453.7

Zeolite struct. OFF. Member of chabazite group. Struct. composed of 2 types of 14-hedra and alternating 11-hedra and hexagonal prisms, with three of each round each wide channel. Struct. contains 1D circular channels (670 pm across) perpendicular and interconnected to 2D channnels (360 × 490 pm across). Mineral found in cavities of basaltic rocks in France, USA, Germany and Australia. Synth. from Al_2O_3—SiO_2—H_2O mixt. + $(Me_4N)_2O$, $H_2N(CH_2)_2NH_2$ or $H_2N(CH_2)_2OH$. Colourless hexagonal prisms.

Me_4N form: White solid (H_2O).

$Al_6H_{36}Mg_2Na_2O_{90}Si_{30}$ IC-000383

Ferrierite

Zeolite ZSM-35

[12173-30-7]

$$Na_2Mg_2[Al_6Si_{30}O_{72}].18H_2O \text{ or } (Na,K)_2MgAl_3Si_{15}O_{36}(OH).9H_2O$$

M 2575.2

Member of mordenite group. Zeolite struct. FER comprises sheets of $(Al,Si)O_4$ tetrahedra linked by $(Al,Si-O)_6$ rings giving 1D channels of $(Al,Si-O)_{10}$ rings (420 × 540 pm across) and $(Al,Si-O)_8$ rings (350 × 480 pm across). Na, Mg variable. Hydrothermal synth. in presence of en or CO_2 at 390°. Mineral from USA, Canada, Italy, Germany, USSR and Australia. Used as catalyst for hydrocarbon cracking and desulfurisation. White needles. Void vol. 0.28 cm^3 cm^{-3}. ZSM-48 has related struct.

Clinoptilolite

[12173-10-3]

$$Na_6[Al_6Si_{30}O_{72}].24H_2O \text{ or } (Na,K,Ca)_6(Si,Al)_{36}O_{72}.20H_2O$$

M 2726.7

Probably alkali rich Zeolite struct. HEU with Si : Al >4. Comprises two interconnected 1D channels (260 × 470 and 300 × 760 pm) and further 1D channel 330 × 460 pm. Zeolite struct. CLI. Member of heulandite group. Mineral of extensive sedimentary occurrence in USA, Australia and New Zealand. Synth. from $Al_2O_3—SiO_2—Na_2O—H_2O$ gel at 200-250°. Important ion exchanger in water purification, nuclear waste processing and an industrial catalyst. Platy white solid. Void fract. 0.34.

$Al_8Na_8O_{96}Si_{40}$ IC-000388

Mordenite

Ptilolite

[12173-98-7]

$$Na_8(Al_8Si_{40}O_{96}).24H_2O$$

M 3059.1

Zeolite struct. MOR comprises puckered hexagonal sheets of $(Al,Si)O_4$ tetrahedra connected through $(Si,Al-O)_4$ rings to give two inter-connected sets of 1D channels, one 650 × 700 pm with $(Si,Al-O)_{12}$ rings and the other 260 × 570 pm with $(Si,Al-O)_8$ rings. Mineral occurs in veins and cavities in igneous rocks as a hydration product of glasses and as an authigenic deposit in sediments. Found in USA, Canada, Italy, Iceland,

Scotland, USSR, Japan and elsewhere. Hydrothermal synth. from gels at 300-415° and 1-3 × 10^3 atm. White cryst. (aq. melt). Many ion exchanged forms known: Ag, Ba, Ca, Cr, K, Li, NH_4 etc.

$Al_{12}Na_{12}O_{48}Si_{12}$ IC-000398

Zeolite A

Linde Sieve A

M 1704.6

First industrially produced (Linde Corporation) synthetic zeolite. Struct. with 3 D channels and $(Al,Si—O)_8$ rings has β cages of sodalite struct. and α cages with cuboctahedral cavities. Used in various ion exchanged forms, most commonly 3A, 4A, 5A. Ion exchange affects apparent pore radius as exchanged cations fill cavities and may block flow. Activated by dehydrating. Absorbs up to 27 H_2O molecules per unit formula. Zeolite struct. type LTA. One of the Faujasite group. Widely used as a molecular sieve, drying agent, and shape-sensitive cracking catalyst. White cryst. (H_2O).

Na form: Molecular sieve 4A. Zeolite 4A
$Al_{12}Na_{12}O_{48}Si_{12}$ M 1704.6
Main form of zeolite A; starting material for ion exchanged forms. Limiting channel diameter of 410 pm. Ring partially blocked by $Na^{\oplus}$. Ag, Co, Cr, Fe, Mn, Cs, Sr and other ion exchanged forms descr.

K form: Molecular 3A. Zeolite 3A
$Al_{12}K_{12}O_{48}Si_{12}$ M 1897.9
Synth. from Na form by ion exchange.

Ca form: Molecular sieve 5A. Zeolite 5A
$Al_{12}Ca_6O_{48}Si_{12}$ M 1669.2
Synth. from Na form by ion exchange. Permeable to n-hydrocarbons, widely used in hydrocarbon separation.

$Al_{13}ClF_9H_9O_{29}Si_5$ IC-000399

Zunyite

[63957-81-3]

$Al_{13}[Si_5O_{16}](OH,F)_{18}O_4Cl$

M 1170.6

$Al_{13}H_{47}O_{40}^{9\oplus} - Al_{18}B_4O_{33}$

Mineral. Also formulated as $Al_{13}ClF_4(OH)_{14}(SiO_4)_5$. Occurs with variable Si to Al ratios with excess Al replacing Si. A branched oligosilicate. Found in aluminous shales in a variety of locations. Minute, transparent tetrahedra.

$Al_{88}Na_{88}O_{384}Si_{134}$

Zeolite Y

$Na_2[Al_2Si_3O_{14}]$

M 12805.5

Important synthetic zeolite, siliceous form of Faujasite, IC-000257. Zeolite struct. FAU with Si:Al 1.5-3. Many ion exchanged forms known (Ac, Ca, Ce, Fe, Mg, Mn, NH_4, Ti, Zn etc.). Synth. from aq. $NaAlO_2$, sodium silicate, SiO_2 and NaOH at 20-175°. Catalyst for fluidised bed cracking or hydrocracking. Possesses ion exchange props. Support for wide range of heterogenous catalysts. White cryst. (H_2O).

IC-000409

Am

Americium

[7440-35-9]

Am

M 241.0

Atomic No. 95. Ground state electron config. $[Rn]5f^77s^2$. 12 Isotopes known. Discovered in 1944 by Seaborg, James, Morgan and Ghiorso (Chicago). Polymorphic: α-form (double hcp) transforms into β-form (fcc) at 793° and thence into a bcc form at 1050°, stable up to Mp. ^{241}Am is an α emitter with $t_{\frac{1}{2}}$ 433y. ^{243}Am has $t_{\frac{1}{2}}$ 7380y. Produced in kg. amounts of $^{241}Am/^{243}Am$ by neutron irradiation of ^{239}Pu. Metal obt. from (i) AmF_3 + Ba or Li; (ii) AmO_2 + La; (iii) AmF_4 + Ca and (iv) by thermal dec. of Pt_5Am. ^{241}Am used in thickness gauging, density, medical radiographic measurements. Low-energy γ-source (e.g. smoke-detector alarms). Both ^{241}Am, ^{243}Am used as target materials for production of heavier actinides. Soft, silver-white, ductile, malleable metal. Tarnishes slowly in dry air, reacts with steam, acids. Reacts on heating with H_2, O_2, N_2, Hal_2, C, B etc. Forms various alloys. Mp 1176°. Bp 2067° (est.).

▷ Radioactive – very intense α and γ emitter.

[AmS]

Americium sulfides

Various sulfides reported, AmS, Am_2S_3, $AmS_{1.9}$.

***Americium sulfide* (*AmS*)** [32103-93-8]

AmS M 273.1

Has NaCl struct. Formed from Am_2S_3 at 650°.

***Americium sulfide* (Am_2S_3)** [12446-46-7]

Obt. as α(orthorhombic), β and γ(cubic) forms. α-form is isostructural with Ce_2S_3. γ-form has Th_3P_4 struct. β-Form is probably an oxysulfide $Am_{10}S_{14}O$. Black powder. Dec. to AmS *in vacuo* at 650°.

***Americium sulfide* (AmS_2)** [32702-49-1]

AmS_2 M 305.1

Non-stoichiometric with composition approx. $AmS_{1.9}$. Isostructural with PuS_2. Black solid. Stable *in vacuo* to 800°. At 850°, forms α-Am_2S_3.

Zachariasen, W.H. *et al*, *Acta Crystallogr.*, 1949, **2**, 57.

Am_2O_3 **IC-000427**

Americium(*III*) oxide (Am_2O_3)

[12234-64-7]

Am_2O_3

M 530.1

Trimorphic. Air-sensitive red-brown or tan solid. Sol. mineral acids.

High-temp form

Formed above 800-900°. Possesses hexagonal La_2O_3 type struct. Mp 2205°. ΔH_f –1690 kJ mol^{-1}

Mid-temp form

Formed in the range 460-800° (900°). Possesses monoclinic Sm_2O_3 type struct.

Low-temp form

Possesses bcc α-Mn_2O_3 type struct. Formed up to 460°.

$Am_2O_{12}S_3$

Americium(*III*) sulfate ($Am_2(SO_4)_3$) **IC-000428**

$Am_2(SO_4)_3$

M 770.3

Yellow solid. Sol. H_2O. Dec. to AmO_2 on heating in air > 700°.

Pentahydrate: Yellow cryst. Dehydrates > 500° to anhyd. sulfate.

Octahydrate: [38296-89-8].

Air-stable yellow-pink cryst. Contains 8-coord. Am (four H_2O, four sulfate oxygens), geometry intermed. between dodecahedron and antiprism. Some evidence for dodecahydrate. Loses H_2O on heating.

Ar **IC-000429**

Argon

[7440-37-1]

Ar

M 39.9

Atomic No. 18. Ground state electron config. [Ne]$3s^23p^6$. Discovered in air in 1894 by Sir W. Ramsey and M.W. Travers. There are 8 isotopes of which 3 are natural. Abundance: 9300 ppm in air (by vol.). Solid state struct. is ccp or hcp (metastable). Obt. by fractionation of liq. air. Used as inert atmosphere, particularly in welding; as gas fill for electric light bulbs, discharge tubes, and lasers. Commercially available. Colourless, odourless, tasteless, monatomic gas. Forms no true chemical compds. Forms clathrates with H_2O and hydroquinone. Forms complex with HBr. Sol. H_2O (33.6 cm^3 kg^{-1} at 20°). Mp –189.4°. Bp –185.9°. Forms clathrate compds. with phenols.

▷ CF2300000.

As **IC-000430**

Arsenic

[7440-38-2]

As

M 74.9

Atomic No. 33. Ground state electron config. [Ar] $3d^{10}4s^24p^3$. 14 Isotopes have been reported of which only ^{75}As is natural and stable. The element may have been isol. by Albertus Magnus (1193-1280), but compds. known for many centuries previously. Abundance: 1.8 ppm (earth's crust); 0.003 ppm (sea water). Occurs in coal (1-1500 ppm), petroleum (0.001-0.15 ppm), oil shale (→ 50 ppm) and throughout earth's crust (*ca.* 5 ppm). Also occurs widely as the sulfides, and as the oxide, as well as arsenides of many metals. Obt. from flue dusts from smelting of Cu and Pb concentrates, and by

heating arsenides e.g. $FeAs_2$, and sulfides e.g. FeAsS to 700°. Used as alloys with Pb or Cu. Compds. widely used in agriculture as herbicides, wood preservatives, sheep and cattle dips, and also in the glass and electronics industries. More recently, employed in superconductors. Not readily attacked by H_2O, $OH^\ominus$ or non-oxidising acids. Stable in dry air, but surface oxidises in moist air. Dil. HNO_3 → H_3AsO_3; conc. HNO_3 → Arsenic acid, IC-000500. Hot, conc. H_2SO_4 → Arsenic oxide (As_2O_3), IC-000627 and Arsenic oxide (As_4O_6), IC-000665. Fused NaOH → Na_3AsO_3 + H_2. Ignition in air → Arsenic oxide (As_2O_3), IC-000627, Arsenic oxide (As_4O_6), IC-000665, Arsenic oxide (As_2O_5), IC-000630. In vapour, As_4 → As_2 at 800°.

▷ CG0525000.

α-form

Hexagonal lattice. Consists of puckered sheets of covalently bonded atoms of coordn. no. 3 with As—As 251.7 pm, AsAsAs 96.7°, (3 neighbours). As—As 312.0 pm (3 next nearest neighbours). Steel-grey, brittle, stable, 'metallic' form. Mp 816° (38.6 atm.). Subl. 615°. d^{26} 5.78 g cm^{-3}.

Yellow cryst.-form

Cubic lattice containing As_4 molecules. Synth. by sublimation. d^{25} 1.97 g cm^{-3}.

β-form

From As vapour at 200°. Amorphous mirror-like arsenic.

γ-form

From As vapour at 100° or by reduction of H_2O sol. As(*III*) compds. Grey-black amorphous solid but also exists in other colours.

Yellow-form

From As vapour at –100° by rapid quenching. Amorphous plastic. Transforms into the α-form on warming.

Mineral-form

Arsenolamprite, *α-Arsenic*

A semiconducting form. A rare cryst. mineral form.

$AsBr_3$

M 314.6
Pyramidal struct. in vapour phase, interatomic distance: As—Br 233 pm; angle: BrAsBr 99.7°. Synth. from As + Br_2; As_2O_3 + S + Br_2. As_2O_3 or As_2O_5, or sulfides + HBr_3. Commercially available. Colourless, deliquescent rhombic prisms. Fumes in air. Sol. Et_2O, C_6H_6, CS_2, hydrocarbons. Mp 32-33° (31.2°). Bp 221°, Bp_{5} 90°. Hydrol. by H_2O → As_2O_3 + HBr. $\Delta H^{\circ}_{f,298}$ −197 kJ mol^{-1}. Exhibits v. low electrical conductivity when pure
B-CG1375000.

Hexaethylbenzene complex (2:1): [106988-54-9].
$C_{18}H_{30}As_2Br_6$ M 875.7
Rhombohedral cryst. Mp 113°. Only sl. sensitive to air and moisture. Struct. $Br_3As—C_6Et_6—AsBr_3$.

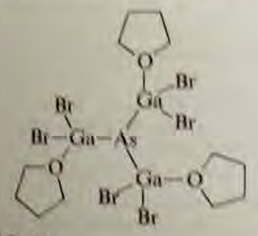
$AsBr_6Ga_3$ IC-000440

μ_3-Arsenidohexabromotrigallium

Tris(dibromogallium)arsenic



Tris-THF-complex

M 763.5
Obt. as tris-THF complex. Synth. from $(Me_3Si)_3As$ and $GaBr_3$ in toluene.
Tris-THF complex: [113007-06-0].
Tris[dibromo(tetrahydrofuran)gallium]arsenic, μ_3-Arsenidynehexabromotris(tetrahydrofuran)trigallium
$C_{12}H_{24}AsBr_6Ga_3O_3$ M 979.8
Pale yellow cryst. (toluene).
Wells, R.L. *et al., J. Chem. Soc., Chem. Commun.*, 1987, 1823 (*synth, cryst struct*)

$AsCaHO_4$ IC-000441

Calcium arsenate (1:1)

Calcium hydrogen orthoarsenate

[15195-00-3]

$CaHAsO_4$

M 180.0
Synth. from $Ca_3(AsO_4)_2$ + 6*M* H_3AsO_4 aq., or from $CaCO_3$ + H_3AsO_4 aq. V. sol. H_2O. When heated → $Ca_2As_2O_7$.
Monohydrate: [30375-02-1].
Synth. from $CaCO_3$ + H_3AsO_4 aq. Rhombic bipyramidal cryst.
Dihydrate: [30621-29-5].
Synth. from CaO + 6*M* H_3AsO_4 aq., or from $CaCl_2$ + Na_2HAsO_4 aq. Monoclinic cryst.
Trihydrate: [29155-65-5].
Interatomic distances: As—O 164.2-173.4, Ca—O 233.6 (mean) pm; angles: OAsO 105.6-113.8°. Struct. comprises orthorhombic Ca—O octahedra sandwiched between AsO_4 tetrahedra. Resultant layers are connected by zig-zag chains of H bonds.

Mineral-form [24503-14-8]
Weilite
$AsCaHO_4$ M 180.0
The anhydrous salt. Triclinic. Contains two crystallographically independent Ca s coordinated respectively by 7 and 8 O atoms. The AsO_4 tetrahedra are in layers with As—O 166.1-172.2 pm and OAsO 104.0-114.9°. Occurs as secondary mineral at sites in France and Germany. White powder or encrustation.

Mineral-form [14646-95-8]
Haidingerite
$AsCaH_3O_5$ M 198.0
Orthorhombic. Composite layer struct. of distorted AsO_4 tetrahedra connected in parallel by H-bonds. Ca 7-coord. The Ca—O polyhedra are connected (in different directions) by common edges or common vertices. As—O 165.7-172.9 pm. Identical to monohydrate. Occurs as a secondary mineral at sites in USA, Germany and Czechoslovakia. White cryst.

Mineral-form [14635-82-6]
Pharmacolite
$AsCaH_4O_6$ M 216.0
Monoclinic. Ca atoms are coordinated by 6 oxygens in AsO_4 tetrahedra. Water molecules are at layer surface. Layers are joined by H-bonds. Identical to dihydrate. Mineral found at sites in USA, Germany, Czechoslovakia and France. Colourless to greyish cryst.

IC-000453

$AsCl_4F$

Arsenic chloride fluoride ($AsCl_4F$)

Tetrachlorofluoroarsorane, 11Cl. Tetrachlorofluoroarsenic(V). Arsenic tetrachloride fluoride

[87198-15-0]

$AsCl_4F$

M 235.7

Synth. by pyrolysis of Tetrachloroarsenic(1+) hexafluoroarsenate(1−), IC-000591. Gas-phase component during sublimation of Tetrachloroarsenic(1+) hexafluoroarsenate(1−), IC-000591. Above −100° → Tetrachloroarsenic(1+) hexafluoroarsenate(1−), IC-000591.

Minkwitz, R. *et al, Inorg. Chem.*, 1987, **26**, 2730 (*spectra*)

$AsCl_4H$ **IC-000454**

Tetrachloroarsenic(III) acid

Hydrogen tetrachloroarsenate(1−), 9Cl, 8Cl

$H[AsCl_4]$

M 217.7

Anion is probably polymeric. Extractable into dibutyl ether.

Py salt: [29961-87-3].
Synth. from $AsCl_3$ + Py.HCl. Needles (aq. HCl). Mp 114°. Polymeric anion.

Quinolinium salt: Synth. from quinoline. HCl + $AsCl_3$. Needles. Mp 130° (123°). Forms dihydrate, Mp 145°.

N-Methylanilium salt (dimeric): see *Dihydrogen di-μ-chlorohexachlorodiarsenate(III)(2−), IC-000597*

Other salts: see *Tetrachloroarsenate(III)(1−), IC-000451*

$AsCl_5$ **IC-000455**

Arsenic(V) chloride ($AsCl_5$)

Pentachloroarsorane, 9Cl. Pentachloroarsenic(V). Arsenic pentachloride

[22441-45-8]

$AsCl_5$ (tbp)

M 252.1

Solid obt. at −105°. Too unstable for isolation at much higher temps. Dec. catalysed by HCl. Forms more stable adducts with $SbCl_5$, PCl_5; ΔH_f° −357 kJ mol^{-1}.

PCl_5 complex (1:1): see *Tetrachlorophosphorus(1+) hexachloroarsenate, IC-000457*

$SbCl_5$ complex (1:1): see *Tetrachloroarsenic(1+) hexafluoroantimonate(1−), IC-000458*

$AsCl_{10}Sb$ **IC-000458**

Tetrachloroarsenic(1+) hexachloroantimonate(1−), 9Cl, 8Cl

Tetrachloroarsonium hexachloroantimonate

[24804-94-2]

$[Cl_4As]^\oplus[SbCl_6]^\ominus$

M 551.1

Orthorhombic. Tetrahedral cation weakly associated with octahedral anion. Synth. from $SbCl_5$ + $AsCl_3$ + Cl_2. Pale yellow, hygroscopic cryst., only stable under Cl_2. Can be sublimed by dec. and recombination.

$AsCl_3$ complex: [19453-04-4].
$As_2Cl_{11}Sb$ M 732.4
Orthorhombic, greenish cryst. $AsCl_3$ may be removed *in vacuo*.

[AsCo] **IC-000459**

Cobalt arsenides

Two phases descr. here.

Cobalt arsenide* ($CoAs_2$), *8Cl [12044-42-7]

Cobalt diarsenide

As_2Co M 208.7

Isotypic with $CoSb_2$. The mineral Smaltite, is an As deficient variety of Skutterudite.

***Cobalt arsenide* ($CoAs_3$)**

Skutterudite

As_3Co M 283.6

Struct. contains well-defined As_4 planar rings disposed in a manner related to ReO_3. The natural mineral contains Ni and is formulated (Co,Ni)As_3. Occurs in medium to high-temp. hydrothermal veins. White metallic cryst.

Kjekshus, A., *Acta Chem. Scand.*, 1971, **25**, 411 (*$CoAs_2$, synth, struct, magnetism*)
Wells, A.F., *Structural Inorg. Chem.*, 5th Edn., O.U.P., 1984, 267 (*$CoAs_3$, struct*)

$AsCoH_{15}N_5O_4$ **IC-000460**

Arsenatopentaamminecobalt(III), 8Cl

[32356-19-7]

$Co(NH_3)_5AsO_4$

M 283.0

Red cryst. solid + $5H_2O$. Phosphate analogue known.

Beech, T.A. *et al, Aust. J. Chem.*, 1971, **24**, 1065; 1973, **26**, 1877 (*synth, ir, raman*)

[AsCr] **IC-000461**

Chromium arsenides

Chromium arsenide* (Cr_2As), *9Cl [12254-85-2]

$AsCr_2$ M 178.9

Has the Cu_2Sb-type struct. A high-temp. Fe_2P-type phase is known. A phase in the Cr-As system. Antiferromagnetic, T_N 393K.

Chromium arsenide* (Cr_3As_2), *9Cl [12255-59-3]

As_2Cr_3 M 305.8

Phase in the Cr-As system. Ferromagnetic with a Curie point of −16°.

Chromium arsenide* ($CrAs$), *9Cl [12044-08-5]

AsCr M 126.9

Adopts a helimagnetic struct. below ~260K. Undergoes a phase transition at 1170K from the MnP to the NiAs struct. type. Phase in the Cr-As system. Grey solid. Insol. H_2O, EtOH.

Nowotny, H. *et al, Z. Phys. Chem., Abt. B*, 1938, **38**, 461 (*synth, cryst struct, Cr_2As*)

$AsCuPbS_3$ **IC-000462**

Copper lead arsenide sulfide ($CuPbAsS_3$)

Seligmannite

$PbCuAsS_3$

M 441.8

CuS_4 tetrahedra and AsS_3 pyramids with Pb in large voids. Similar to wurtzite. Mineral found in Tuscany, Italy. Cryst.

Takeuch, Y. *et al, Z. Kristallogr., Kristallogeom., Kristallphys., Kristallchem.*, 1969, **130**, 254
Edenharter, A. *et al, Z. Kristallogr., Kristallogeom., Kristallphys., Kristallchem.*, 1970, **131**, 397 (*cryst struct*)

$AsCu_3S_3$ **IC-000463**

Copper arsenic sulfide (Cu_3AsS_3)

Tricopper(1+) thioarsenite, 8Cl. Tricopper(I) arsenic trisulfide

[15117-93-8]

Cu_3AsS_3

M 361.7

Cubic lattice with wurtzite type struct. Defect. struct. with vacancies at ¼ of the S sites. Synth. from the elements. Mp 640°. Struct. stable at high pressure.

Storm, A.R. *et al, J. Phys. Chem. Solids*, 1968, **29**, 623 (*struct*)

$AsCu_3S_4$ **IC-000464**

Tricopper(1+) thioarsenate, 8Cl

Tricopper(1+) arsenotetrathioate, 9Cl. Copper arsenic sulfide (Cu_3AsS_4)

[15117-94-9]

Cu_3AsS_4

M 393.8

Orthorhombic. Dark, purplish grey, granular cryst. Exhibits moderate bireflectance (pale yellowish pink to pinkish grey with violet tint). Distinct anisotropism changing col. from dark blue to reddish orange. Mp 655°.

Mineral-form [14933-50-7]

Enargite

Possesses the wurtzite-type struct. Orthorhombic. Cu—S 230-238 pm, As—S 216-219 pm. Occurs in ores distributed world-wide. Dark grey grains with metallic lustre. Exhibits strong bireflectance (pale pinkish yellow to pale pinkish grey) with strong anisotropism (interference col. dark blue → orange). Obt. from luzonite at 450°.

Mineral-form [12173-86-3]

Luzonite

Possesses zinc blende struct. with As—S 226.5, Cu—S 230.4-233.7 pm. Occurs world-wide. Synth. from CuS + As_2S_3 at 250-350°. Tetragonal deep pinkish brown cryst. with greyish tinge. Stable to 450° when converted into enargite.

AsF_3

Arsenic fluoride (AsF_3), 8Cl

Arsenous trifluoride, 9Cl. *Trifluoroarsine*. *Trifluoroarsenic*(III)

[7784-33-2]

AsF_3

M 131.9

Detected in Jupiter's atm. Pyramidal struct in gas phase. Interatomic distance As—F 170.6 pm; angle FAsF ~102°. Orthorhombic cryst. system containing distorted tricapped trigonal prisms of F around As. Synth. from As_2O_3 + HF or HSO_3F. Fluorinating agent, although weaker than SbF_5. Commercially available. V. mobile, colourless liq. which fumes in air and readily hydrol. Sol. alcohols, Et_2O, C_6H_6. d^{15} 2.73. Mp −6.0° (−8.5°). Bp 63°. Attacks glass, but not polythene. ΔH_f° −956.5 kJ mol⁻¹; ΔH_f° (g) −910 kJ mol⁻¹.

▷ Very poisonous. CG5775000.

AsF_6K

IC-000473

Potassium hexafluoroarsenate(*V*), 9Cl

Hexafluoroarsenate(1 −), *potassium salt*, 8Cl

[17029-22-0]

$K[AsF_6]$

M 228.0

Trigonal. As at centre of discrete octahedral anion: As—F 172, K—F 289 pm. Synth. by reaction of a mixt. of a potassium halide and excess arsenicus oxide with HrF. Commercially available. Herbicide. Thick, colourless plates. Melts at red heat with part. dec. Forms a hemihydrate.

▷ Highly toxic, cancer suspect agent. TT1225000.

Rhombohedral-form
Distorted CsCl type. At 101.5° transformed into cubic form.

Cubic-form
Highly distorted anion.

AsF_6Li

IC-000474

Lithium hexafluoroarsenate(*V*)

Hexafluoroarsenate(1 −) *lithium salt*, 8Cl

[29935-35-1]

$LiAsF_6$

M 195.8

Commercially available. High purity $LiAsF_6$ is prepd. by a metathetical reaction between $KAsF_6$ and $LiClO_4$ in an inert org. solv. such as HCOOMe. Alternative preparation involves reaction of aq. $HAsF_6$ with aq. LiOH. Electrolyte component for lithium battery systems. Rhombohedral white cryst.

▷ Highly toxic cancer suspect agent.

IC-000479

$AsFeO_3$

Ferric arsenite

Iron(III) arsenite (FeAsO₃)

$FeAsO_3$

M 179.7

Tetrahydrate: [61095-38-1].

Basic salt: Basic iron(III) arsenite. Basic iron(III) orthoarsenite

$As_2Fe_4H_8O_{16}$ M 607.3

Brown-yellow powder. Sol. acid, alkali; insol. H_2O. Formulated as $2FeAsO_3.Fe_2O_3.5H_2O$. Composition may vary. Dec. at Mp.

Gmelin Handbook Inorg. Chem., Syst. No. 58, 1931, B4, 780 (rev, bibl)

$AsFeO_4$

IC-000480

Iron(*III*) arsenate ($FeAsO_4$)

Ferric arsenate. Iron(III) orthoarsenate. Arsenic acid, iron(3+) salt (1:1), 11Cl

[10102-49-5]

$Fe(AsO_4)$

M 194.7

Originally proposed that Fe(*III*) was octahedrally coordinated. Now known to be isostructural with $LiAlH_4$ with 5-coord. Fe. Hydrated salt used for most applications. Synth. from As_2O_5 + $Fe(NO_3)_3.9H_2O$ or $Fe(OH)_3$ in hydrothermal conditions. Component in electrochromic devices. Used to remove As from H_2O.

▷ NO4585000.

Dihydrate: [16103-66-5]. ***Scorodite***

Mineral, occurs widely throughout US and elsewhere. Insecticide. Green-brown powder or large blue cryst. Insol. H_2O; sol. dil. HCl; insol. HNO_3. Dec. on heating.

▷ Toxic by ingestion or inhalation. Strong irritant.

$AsHMgO_4$

IC-000485

Magnesium arsenate (1:1), 9Cl

Magnesium hydrogen arsenate. Magnesium hydrogen orthoarsenate

[7778-40-7]

$MgHAsO_4$

M 164.2

Additional hydrates recorded include the hemihydrate.

Monohydrate: [33972-31-5].
Colourless cryst. Metastable at 20°.

Hydrate (2:5): [30621-33-1].
Colourless cryst. Stable at 60°

Tetrahydrate: [28877-83-0].
Synth. by ambient air dehydration of heptahydrate. Orthorhombic.

Heptahydrate: [13520-58-6].
Synth. from Na_2HAsO_4 + $MgSO_4$ aq. Large prisms. Monoclinic. At 100° → dihydrate, and at 200° → monohydrate.

Mineral-form
Brassite
Identical to the tetrahydrate. Found as a specimen coating at sites in Germany. Orthorhombic white cryst.

Mineral-form [1319-39-7]
Rosslerite
Identical to heptahydrate. Occurs as a secondary mineral at sites in Germany and Czechoslovakia. Monoclinic white cryst.

$AsHMnO_4$

IC-000486

Manganese(*II*) arsenate(*V*) ($MnHAsO_4$)

$Mn(HAsO_4)$

M 194.8

Anhydrous compd. not known. $MnHAsO_4.nH_2O$ (n = 1 or 4) observed in the $Mn_3(AsO_4)_2$-H_3AsO_4-H_2O system.

Monohydrate: [13446-33-8]. ***Krautite***
AsH_3MnO_5 M 212.8
Synth. by mixing aq. solns. of Na_2HAsO_4 and $MnCl_2$. Good transparent and stable gels formed from $MnCl_2$ and KH_2AsO_4 in freshly-boiled H_2O. Also mineral. Pale rose-coloured cryst. Sl. sol. H_2O. Struct. built up from $MnO_4(OH_2)$ octahedra and $AsO_3(OH)$ tetrahedra. Intercalates linear alkylamines. Thermal dec. at 200° gives $Mn_2As_2O_7$.

Tetrahydrate: Light pink cryst.

$AsHMn_4O_{12}Si_3$

Tiragalloite

[75797-77-2]

$HMn_4As[Si_3O_{10}]O_1$ or $Mn_4AsSi_3O_{12}(OH)$

M 587.9

Unbranched oligosilicate (3 SiO_4 tetrahedra per unit). Mineral, occurs in Italy. Small orange grains.

Giramaccioli, C.M. et al. Acta Crystallogr., Sect. B, 1979, **35**, 2287 (*cryst struct*)

Giramaccioli, C.M. et al. Am. Mineral., 1980, **65**, 947 (*cryst struct*)

IC-000488

$AsHNa_2O_4$

Disodium arsenate, 9CI, 8CI

Disodium hydrogen arsenate. Sodium arsenate (Na_2HAsO_4)

[7778-43-0]

Na_2HAsO_4

M 185.9

Commercially available. ^{74}As labelled compd. used as radioactive agent. Wood preservative, bacteriocide, herbicide. White solid. Sol. H_2O (10.1 g per 100 cm^3 at 5°). Yields Tetrasodium drarsenate, IC-000626 at *ca.* 195°.

▷ Highly toxic. CG0875000.

Dihydrate: Lozenge-shaped, colourless cryst.

Pentahydrate: [20670-84-2]

Formed by melting heptahydrate at 60°. Colourless square plates. Mp 67°. At 66-99° dehydrates further.

Heptahydrate: [10048-95-0].

Formed by cryst. at >8°. Commercially available. Prisms. V. sol. H_2O (5.5 g per 100 cm^3 at 0°); spar. sol. EtOH. Mp 40°. Dehydrates at 105° or at 30° *in vacuo*. Monoclinic. Layer struct. in which the two crystallographically independent Na atoms are each coordinated by six O atoms (of H_2O molecules); the octahedra sharing terminal edges. The AsO_4 tetrahedra (As–O 1.66–1.74 pm) lie between the layers, and are linked by H-bonds between arsenate and water molecules.

▷ CG0900000.

Octahydrate: [74193-27-4]

Irregular granules, sometimes prisms.

Dodecahydrate: Formed by low temp. cryst. in. Prisms. Mp 22.2°. (20°). Monoclinic.

Titanium(*IV*) arsenate hydroxide ($Ti(AsO_4)(OH)$), 11Cl

[84662-61-3]

$Ti(AsO_4)OH$

M 203.8

Synth. by heating aq. $TiCl_4$ and H_3AsO_4 in a sealed quartz ampoule at 250°/40 atm. White solid which dec. to $Ti_2O(AsO_4)_2$ at 400-580°.

Chernorukov, N.G. *et al, Russ. J. Inorg. Chem. (Engl. Transl.)*, 1982, **27**, 1728 (*synth, ir, powder struct*)

IC-000492

$AsHO_8P_2$

Arsenic phosphate, 8Cl

[12254-96-5]

$AsH(PO_4)_2$

M 265.9

Behaves as a monobasic acid. From As_2O_5-P_2O_5-H_2O system. Rhombic cryst. Forms dihydrate on exp. to air.

Winkler, A. *et al, J. Polym. Sci., Part C*, 1969, 4283 (*synth, cryst struct*).

IC-000493

AsH_2NaO_4

Monosodium arsenate, 9CI, 8CI

Monosodium dihydrogen orthoarsenate. Sodium arsenate (NaH_2AsO_4)

[10103-60-3]

NaH_2AsO_4

M 163.9

Mp 118°. Thought to exist in monoclinic and orthorhombic modifications.

Monohydrate: [13466-04-1].

Synth. from As_2O_5 + NaOH aq. at 0°. White cryst. powder. May be dehydrated *in vacuo* at 30°, or in air at sl. higher temp. Infinite chains of Na octahedra are bridged by AsO_4 tetrahedra. The four AsO_4 oxygen atoms are coordinated to four different Na atoms leading to 3-D network of tetrahedra and octahedra. As—O 164.5-174.9 pm. May exist in two forms (i) rhombic bipyramids, and (ii) monoclinic prisms. Dehydrates at 100-130°, and at 200-280°, → Sodium arsenenate, IC-000536.

Dihydrate: [74193-26-3].

Synth. from As_2O_5 in NaOH aq. Cryst. (H_2O).

Gmelin Handbook Inorg. Chem., Syst. No. 21, 1928, 945; *Supplement*, Vol. 4, 1967, 1698; *Supplement*, Vol. 5, 1970, 2019 (*rev, bibl*)

[AsHf] IC-000511

Hafnium arsenides

At least seven phases heave been described; none in great detail.

Hafnium arsenide *(Hf_3As), 11CI* [73468-08-3]
$AsHf_3$ M 610.3

Struct. intermediate between those of Fe_2P and Ti_2P. Synth. like $HfAs$

Hafnium arsenide (*Hf_2As*), *8Cl*
$AsHf_2$ M 431.9
Struct. resembles Ta_2P. Synth. by heating the elements to 900° for 3 d then arc-melting the product.

Hafnium arsenide (*Hf_3As_2*), *11Cl*
As_2Hf_3 M 685.3
Isostructural with Hf_3P_2. Synth. like $HfAs$.

Hafnium arsenide (*HfAs*), *11Cl* [12380-31-3]
AsHf M 253.4
Struct. resembles TiP. Synth. by heating Hf and As at 1000° for 70 h or at 900° for 3 d and arc-melting the product.

Hafnium arsenide (*$HfAs_2$*), *11Cl* [12380-37-9]
As_2Hf M 328.3
$PbCl_2$ struct. Synth. like HfAs.

Jeitschko, W. *et al*, *Monatsh. Chem.*, 1962, **93**, 1284 (*synth, cryst struct, HfAs, $HfAs_2$, Hf_2As, Hf_3As*)

$AsInO_4$ — IC-000518

Indium(*III*) arsenate
[59150-90-2]

$InAsO_4$

M 253.7
Synth. from $InCl_3$ + H_3AsO_4 at pH 1.9-2.7. Amorphous precipitate loses H_2O at 230-300° and crystallises at 520°. White solid.

[21687-70-7]

Deichmann, E.N. *et al*, *Russ. J. Inorg. Chem.* (*Engl. Transl.*), 1974, **19**, 19 (*synth, ir*)

[AsIr] — IC-000519

Iridium arsenides

Iridium arsenide (*IrAs*) [62828-56-2]
AsIr M 267.1
Found as a phase in IrAs semiconductors.

Iridium arsenide (*$IrAs_2$*), *8Cl* [34312-54-4]
Iridium diarsenide
As_2Ir M 342.0
Has the $CoSb_2$ type struct.

Iridium arsenide (*$IrAs_3$*) [12256-08-5]
Iridium triarsenide
As_3Ir M 416.9
Has cubic $CoAs_3$ (skutterudite) struct. (See under Cobalt arsenides, IC-000459).

AsKMnS$_3$ — IC-000520

Manganese potassium arsenide sulfide

$KMnAsS_3$

M 265.1
No recent work. Synth. by reaction of $Mn^{2\oplus}$ soln. with conc. K_3AsS_3 soln. Rapidly dec. to $Mn_3(AsS_3)_2$ in H_2O.

Wunschendorff, H. *et al*, *Bull. Soc. Chim. Fr.*, 1933, **53**, 1529 (*synth*)
Gmelin Handbook Inorg. Chem., Syst. No. 56, 1983, **C9**, 369 (*rev, bibl*)

$AsKO_2$ — IC-000521

Potassium arsenenite, 9Cl
Potassium arsenite, 8Cl. Potassium metaarsenite. Arsenic potassium oxide (*$AsKO_2$*)
[13464-35-2]

$KAsO_2$

M 146.0
Polymeric struct. Synth. from As_2O_3 + K_2SO_4 or $K_2S_2O_7$ at 500-900°.

Monomeric-form
By vaporisation of $KAsO_2$ or K_2CO_3-As_2O_3 mixt., with condensation in N_2 matrix. Thought to consist of $K(O)_2As$ four-membered ring.

Ogden, J.S. *et al*, *J. Chem. Soc., Dalton Trans.*, 1982, 825 (*synth, ir, struct*)

IC-000523

AsKSe$_3$

Potassium arsenotriselenoate, 9CI

Potassium triselenoarsenate. Potassium arsenic selenide ($KAsSe_3$)

[104302-49-0]

$KAsSe_3$

M 350.9

Struct. isotypic with corresp. Rb and Cs salts. Synth. from As_2Se_3 + $(NH_4)_2CO_3$ aq. at 135°

Monohydrate

AsH_2KOSe_3 M 368.9

Monoclinic. Pseudo-$AsSe_3$ tetrahedra (As—Se 231.9-242.5 pm) are linked through Se—Se bonds (234.8 pm) into infinite $AsSe_3^-$ chains.

Sheldrick, W.S. *et al. Z. Anorg. Allg. Chem.*, 1986, **535**, 179 (*synth, cryst struct*)

IC-000524

|AsMn|

Manganese arsenides

Manganese arsenide* (Mn_3As), *11CI [61219-26-9]

$AsMn_3$ M 239.7

Has chain struct. Synth. by heating Mn and As under a protective flux or in a corundum crucible in a sealed silica tube. Metallic orthorhombic cryst.

Manganese arsenide* (Mn_2As), *11CI, 10CI [12005-96-8]

$AsMn_2$ M 184.7

Exists in two modifications: tetragonal Cu_2Sb type under ordinary conditions and Fe_2P type at high pressures. Struct. contains Mn atoms with tetrahedral and square-pyramidal As coordination. Obt. by heating stoichiometric amounts of Mn and As powders in an evacuated sealed tube. Cryst., rel. stable in air and HCl. Sol. HNO_3. Antiferromagnetic below 570K. Forms solid solns. with arsenides of type M_2As and Mn_2Sb.

Manganese arsenide* (Mn_2As_3), *11CI, 10CI [12313-65-4]

As_2Mn_4 M 314.6

Distorted cubic struct. Obt. by heating a stoichiometric mixture of powdered Mn and As in an evacuated, sealed quartz tube slowly to 900°. Sol. HNO_3; rel. stable in air and HCl. Ferromagnetic.

***Manganese arsenide* (Mn_4As_3)**

As_3Mn_4 M 444.5

Healing a mixture of powdered MnAs and Mn in a sealed ceramic (Mg_2SiO_4) tube at 1000° gives a product of composition v. close to Mn_4As_3.

Manganese arsenide* (*MnAs*), *10CI [12005-95-7]

AsMn M 129.8

Prepared from elements at 700° for 10h. Whiskers, single cryst., and films have also been prepd. Metallic conductor. Can be ferromagnetic in low temp. hexagonal phase and (under high press.) in the orthorhombic phase. Potential use in magnetooptic storage devices. Commercially available. Greyish-black powder. Mp 936° (As press. 30mm Hg). Paramagnetic above *ca.* 320K.

IC-000531

|$AsMn_4Sb$|

Manganese arsenide antimonide

$Mn_2As_xSb_{1-x}$

Mn_2Sb and Mn_2As form a continuous series of solid solns. as shown by neutron and X-ray diffraction measurement. Synth. by heating appropriate portions of elements at 700° for 50h *in vacuo*. Solid solns. crystallise in the tetragonal Cu_2Sb struct. type.

$AsNaO_2$

Sodium arsenenite, 9CI

Sodium arsenite, 8CI. Sodium metaarsenite. Arsenic sodium oxide ($AsNaO_2$). Arsenious acid ($HAsO_2$) sodium salt, 8CI

[7784-46-5]

$NaAsO_2$

M 129.9

Orthorhombic. Each As is at the apex of a triangular pyramid having 3 oxygens as the base. Each AsO_3 group shares oxygens to form polymeric chains. Synth. from AsO_3—NaOH melt. Commercially available. Herbicide. Used in electroplating of coinage metals. Thin flakes (from melt). V. sol. H_2O; spar. sol. EtOH.

▷ V. toxic. CG3675000.

Tetrahydrate: [111373-27-4].
Synth. from Na_2O—As_2O_3—H_2O system at 6°. The polymetaarsenite anion consists of doublets of single —(O—As)— chains with As—O 183.0-183.8 pm (chain), 171.2 pm (terminal).

Monomeric-form
Synth. by vaporisation of Na_2CO_3—As_2O_3 mixture. May possess a 4-membered $As(O)_2Na$ ring system.

$AsNa_3O_3S$

IC-000541

Trisodium arsenothioate, 9CI

Trisodium monothioarsenate. Sodium thioarsenate ($NaAsO_3S$)

[17367-56-5]

$Na_3(AsO_3S)$

M 223.9

Prep. as dodecahydrate which is then dehydrated stepwise under v. mild conditions. A hemihydrate and hexahydrate have also been claimed. Synth. from As_2O_3 + NaOH aq. + S. Colourless hexagonal cryst. Effloresces in air. V. sol. H_2O. In N_2 atm., stable to 420°. At 550°, → $Na_3AsS_3 + Na_2AsO_4$. H_2O → $Na_3AsO_4 + H_2O$. $K_3Fe(CN)_6$ or I_2 → As_2S_5 + S.

Heptahydrate: [34377-63-4].
From dodecahydrate. Monoclinic. Water molecules are sited (in groups of 2 and 5) into two different environments. In AsO_3S irregular tetrahedra, distances: As—O 167, As—S 214, S—O 314 pm; angles: OAsO 107.5-109.3°, OAsS 107.5-113.3°.

Dodecahydrate: [34377-62-3].
Synth. from As_2O_3 + NaOH aq. + S; or from $Na_3AsO_2 + Na_4S_4$; or from As_2S_5 + NaOH aq. Rhomb. bipyramids. V. sol. H_2O (29.5 g per 100 cm^3 at 5°, 80 g per 100 cm^3 at 21°, 100 g per 100 cm^3 at 24°). Orthorhombic. Units of 3 face-sharing distorted $[Na(OH_2)_6]^{\oplus}$ octahedra are each connected by 2 common vertices into zig-zag chains. Endless chains of $[Na_3(OH_2)_{11}]^{3\oplus}$, discrete $AsO_3S^{3\ominus}$ anions, and discrete H_2O molecules, are linked by H-bonds. Better represented as $[Na_3(OH_2)_{11}][AsO_3S]H_2O$. Dehydration under N_2 → heptahydrate.

[AsNb]

Niobium arsenides **IC-000545**

***Niobium arsenide* (Nb_3As)** [12005-98-0]
$AsNb_3$ M 353.6
Isostruct. with Ti_3P. Mixed $(Nb,Ta)_3As$ phases are also known. Synth. by melting Nb and As under 40 atm. Ar or by arc-melting NbAs and Nb.

***Niobium arsenide* (Nb_4As_4)** [12429-24-2]
As_4Nb_7 M 950.0
Struct. like Nb_7P_4. Synth. by arc-melting NbAs and Nb.

***Niobium arsenide* (Nb_5As_3)** [12429-23-1]
As_3Nb_5 M 689.2
Struct. like Nb_5P_3. Synth. by arc-melting NbAs and Nb.

***Niobium arsenide* (Nb_6As_3)** [12429-22-0]
As_3Nb_4 M 596.3
The struct. consists of interconnected Nb_6As trigonal prisms with one extra Nb and one As in holes between the prisms. The coordination number of Nb varies between 4 and 6. Synth. by arc-melting Nb and As.

***Niobium arsenide* (*NbAs*)** [12255-08-2]
AsNb M 167.8
The NbAs struct. type contains $NbAs_6$ octahedra and $AsNb_6$ trigonal prisms; it is related to that of WC. Synth. by thermal dec. of $NbAs_2$ at 1100° or by direct combination of the elements. During formation from the elements a mixture of NbAs and WC structs. is observed.

AsNbSi **IC-000546**

Niobium arsenide silicide (NbAsSi), 9CI
Niobium silicide arsenide (111)

NbAsSi

M 195.9
Tetragonal PbFCl struct. Synth. by heating NbSi and As at temps. up to 800°.

Johnson, V. *et al, J. Solid State Chem.*, 1973, **6**, 306 (*synth, cryst struct*)

AsNi **IC-000547**

Nickel arsenide (NiAs), 9CI
Kupfernickel
[27016-75-7]

NiAs

M 133.6
Prototypical layer struct. Other arsenides known, but less studied. Synth. from Ni + As. Red solid. Mp 968°.

Mineral-form
***Niccolite.** Nickeline. Red nickel ore*
Occurs widely. Pale copper-red, metallic solid.

Dana's System of Mineralogy, 7th Ed., Wiley, N.Y, 1944, **1**, 236 (*mineral*)
Remy, H., *Treatise on Inorg. Chem.*, Elsevier, 1956, **2**, 313.

[AsNp] **IC-000548**

Neptunium arsenides

***Neptunium arsenide* (*NpAs*)** [39350-08-8]
AsNp M 311.9
Possesses NaCl struct. Cryst. Semimetallic. Simple ferromagnet at high fields in range 4.2-300K. T_N 173K. Tetragonal struct. at low temps., various phase changes known.

***Neptunium arsenide* ($NpAs_2$)** [39350-10-2]
As_2Np M 386.8
Tetragonal; isostructural with Fe_2As. Cryst. Forms NpAs *in vacuo* at 640°. Ferromagnetic up to 18K, antiferromagnetic 18K-52K, then paramagnetic; μ_{eff} = 1.58μ_B.

AsO$_3$Sb **IC-000549**

Antimony arsenite, 8CI
Arsenic(III) *antimony*(III) *oxide ($AsSbO_3$)*
[12523-20-5]

$AsSbO_3$

M 244.6
Mean interatomic distances: As—O 180, Sb—O 195 pm. Monoclinic. Isostructural with Claudetite I. No As—Sb disorder. Synth. from As_2O_3 + Sb_2O_3 in quartz tube at 400°. Colourless cryst.

Bodenstein, D. *et al, Z. Naturforsch., B*, 1983, **38**, 901 (*synth, cryst struct*)

AsO$_4$P **IC-000550**

Arsenic phosphate, 8CI
Arsenic(III) *phosphoric*(V) *oxide ($As_2O_3 \cdot P_2O_5$)*
[27671-86-9]

$AsPO_4$

M 169.8
Exists in orthorhombic, and other forms. In orthorhombic form, As(*III*) is coordinated by 3 oxygen atoms, the P by 4 oxygen atoms as distorted tetrahedron with interatomic distances: P—O 147.6 - 157.0, As—O 179.4 - 180.0 pm; angles: POP 105.1 - 116.1°, OAsO 89.9 - 90.2°. Synth. from Arsenic oxide phosphate, IC-000495 by heating or from cubic As_2O_3 and hexagonal P_4O_{10}. Weakly hygroscopic cryst.
[13779-14-1]

Dachet, J.P. *et al, Compt. Rend. Hebd. Seances Acad. Sci. Sect. C*, 1969, **268**, 1767; 1971, **272**, 925 (*formn, cryst struct*)
Bodenstein, D. *et al, Z. Naturforsch., B*, 1982, **37**, 136 (*synth, cryst struct*)

AsO$_4$Sb **IC-000551**

Antimony arsenate, 8CI
Antimony(III) *arsenic*(V) *oxide*
[28980-47-4]

$SbAsO_4$

M 260.6
Monoclinic. Infinite layer struct. with As tetrahedrally coordinated by four oxygens and Sb coordinated by four oxygens in a one-sided manner. All oxygens bridge As to Sb. Interatomic distances: As—O 163.7, 167.7, 168.6, Sb—O 201.6, 217.4 pm. Synth. by heating Sb_2O_3 + As_2O_5. 5/3 H_2O at 400° for 1week. Alternatively, Sb_4O_6 or As_4O_6 may be used. Air-stable. Colourless rectangular plates.

Jones, P.G. *et al, Acta Crystallogr., Sect. B*, 1980, **36**, 1923 (*synth, cryst struct*)

AsO$_9$PZr$_2$ **IC-000552**

[Orthoarsenato(3−)-*O*]-μ-oxo[phosphato(3−)-*O*] dizirconium(*IV*), 11CI
Zirconium arsenate oxide phosphate ($Zr_2(AsO_4)O(PO_4)$)

$(AsO_4)ZrOZr(PO_4)$

M 432.3
Trihydrate: [81899-53-8].
Synth. by mixing aq. solns. of $ZrOCl_2$, Na_2HAsO_4 and Na_3PO_4 at pH 0-1. Acts as an ion-exchanger.

Varshney, K.G. *et al, Sep. Sci. Technol.*, 1981, **16**, 793 (*synth, props*)
Varshney, K.G. *et al, Talanta*, 1983, **30**, 955 (*props*)

AsO$_{11}$PTi$_3$ **IC-000553**

[μ-[Orthoarsenato(3−)-*O*:*O*']]trioxo[μ-[phosphato(3−)-*O*:*O*']]trititanium(*IV*), 11CI
Titanium arsenate oxide phosphate ($Ti_3(AsO_4)O_3(PO_4)$)

$Ti_3(AsO_4)O_3(PO_4)$

M 425.5
Trihydrate: [81899-56-1].
Synth. by mixing aq. solns. of $TiCl_4$ in 30% HCl, with sodium arsenate and sodium phosphate in appropriate proportions. Useful as an ion-exchanger.

Varshney, K.G. *et al, Sep. Sci. Technol.*, 1981, **16**, 793 (*synth, ion-exchange props*)
Varshney, K.G. *et al, Talanta*, 1983, **30**, 955 (*use*)

AsO$_{33}$W$_9^{9\ominus}$ **IC-000554**

Tungstoarsenate ($AsW_9O_{33}^{9\ominus}$), 8CI
μ_9-[Arsenito(3−)]pentadeca-μ-oxopentadecaoxononatungstate(9−), 10CI
[51184-78-2]

$[AsO_{33}W_9]^{9\ominus}$

M 2257.5 (ion)
Heteropolyanion. Formed from As_2O_3 + $[WO_4]^{2\ominus}$ in alk. solns. Forms complex ions with e.g. $Cu^{2\oplus}$.
[77173-96-7, 82975-12-0]

Tourne, C. *et al, Compt. Rend. Hebd. Seances Acad. Sci. Sect. C*, 1973, **277**, 643 (*synth*)
Robert, F. *et al, Acta Crystallogr., Sect. B*, 1982, **38**, 358 (*synth, cryst struct, copper complex*)

AsP **IC-000555**

Arsenic phosphide, 9CI, 8CI
Phosphorus arsenide
[12255-33-3]

AsP

M 105.8

Formed by successive discharge through $AsCl_3$/PCl_3 mixt. or from As_2P fine powder mixt. at 380-550°. Also from AsH_3 + PCl_3 under H_2 and PH_3 + AsF_3 or $AsCl_3$ + PCl_3 at cr. −20°. Brown or red powder. Sol. CS_2, mixt. EtOH, Et_2O, $CHCl_3$. ΔH^o_{298} 187 kJ mol^{-1}. Aerial oxid. → As_2O_3 + P_2O_5.

Gmelin Handbook, Inorg. Chem., Syst. No. 17, 1952, 473 (rev., bibl)

IC-000558

AsP_3S_3
3,5,7-Trithia-1,2,4-triphospha-6-arsatricyclo[2.2.1.0^{2,6}]heptane, 11CI
Arsenic phosphorus sulfide (AsP_3S_3)
[85135-63-3]

M 264.0
In equilibrium with Arsenic sulfide (As_4S_3), IC-000666 and Arsenic phosphorus sulfide ($As_2P_2S_3$), IC-000641 or Arsenic phosphorus sulfide ($As_2P_2S_5$), IC-000642 in molten state. Synth. from P_4S_3 + As_4S_3.

Buss, W. et al, Z. Anorg. Allg. Chem., 1984, 516, 42.
Blachnik, R. et al, Z. Naturforsch., B, 1984, 39, 1135 (P-31 nmr)
Baldus, H.P. et al, Monatsh. Chem., 1988, 119, 515 (synth, purif)

AsP_3Se_3 IC-000557

3,5,7-Triselena-1,2,4-triphospha-6-arsatricyclo[2.2.1.0^{2,6}]heptane, 11CI
Arsenic phosphorus selenide (AsP_3Se_3)
[92477-61-7]

M 404.7
Some of reported data may refer to 3,5,7-Triselena-1,2,6-triphospha-4-arsatricyclo[2.2.1.0^{2,6}]heptane, IC-000558. Can be transformed into plastically-cryst. phase by rapid heating of amorphous phase. Synth. from P_4Se_3 + As_4Se_3 as minor isomer. Amorphous or plastic.

[AsRh] IC-000562

Rhodium arsenides

Various other phases known. Synth. by direct combination of the elements.

Rhodium arsenide (Rh_2As) [37342-44-2]
$AsRh_2$ M 280.7
Has fcc, antifluorite struct. Undergoes reversible $\alpha \rightarrow \beta$ modification at ~ 607° (650-700°).

Rhodium arsenide ($Rh_{12}As_7$) [98111-97-8]
As_7Rh_{12} M 1759.3
Disordered struct. closely related to $Cr_{12}P_7$. Previously described as $Rh_{1.7}As$. Synth. from Rh and As in 12:7 ratio at 800°. Host struct. for rare earth elements.

Rhodium arsenide (RhAs) [91094-33-6]
AsRh M 177.8
Orthorhombic.

Rhodium arsenide ($RhAs_2$) [12337-64-3]
Rhodium diarsenide
As_2Rh M 252.7
Has the $CoSb_2$ type struct.

Rhodium arsenide ($RhAs_3$) [12256-11-0]
Rhodium triarsenide
As_3Rh M 327.6
Isostructural with $CoAs_3$ (Skutterudite).

[86510-29-4, 118917-16-1]

[AsRu] IC-000563

Ruthenium arsenides

Ruthenium arsenide (RuAs)
AsRu M 175.9
Isostructural with MnP. Prepd. by heating the elements in a sealed tube at 700°. Rhombic cryst.

Mineral: [53172-82-0]. ***Ruthenarsenite, 9CI***
Pale orange brown to grey. Orthorhombic; contains. Ni partially replacing Ru.

Ruthenium arsenide ($RuAs_2$) [12006-30-3]
Ruthenium diarsenide
As_2Ru M 250.9
A compressed marcasite struct. (or löllingite struct.). Prepd. by heating the elements in a sealed tube at 700°. Orthorhombic.

Mineral: [72271-23-9]. *Anduoite, 10CI* [86510-30-7]

[AsTa] IC-000566

Tantalum arsenides

Tantalum arsenide (Ta_3As), 10CI [12255-41-3]
$AsTa_3$ M 617.7
This phase was reported by Ganglberger to have the Ti_3P struct. Nb_3As and $(Nb,Ta)_3As$ phases have this struct. but more recent work established a new struct for Ta_3As in which there is a network of four octagonal antiprisms of Ta atoms. Synth. by heating Ta and As in a sealed silica tube at 700°.

Tantalum arsenide (Ta_2As) [12429-12-8]
$AsTa_2$ M 436.8
Struct. like Ta_2P. Synth. by arc-melting TaAs and Ta then heat treating in an induction furnace at 1700°.

Tantalum arsenide (Ta_4As_3), 9CI [12429-25-3]
As_4Ta_9 M 1204.4
Struct. resembles Ti_3Te_4. Synth. by dec. of TaAs at 1500°.

Tantalum arsenide (TaAs), IICI [12255-40-2]
AsTa M 255.8
Isostructural with NbAs but WC struct. is found in unannealed samples. Synth. by heating the elements in a sealed silica tube at 700° and annealing at 1200°.

Tantalum arsenide (TaAs$_2$), 10CI [12256-00-7]
As_2Ta M 330.7
Isostruct. with $NbAs_2$. By-product of the reaction of K and As in a sealed Ta tube at 800°.

IC-000567

AsTe

Arsenic telluride (AsTe), 9CI
Tellurium arsenide
[12044-35-6]

AsTe

M 202.5
Polymorphic. Synth. from As + Te.

Cryst form
Face-centred cubic struct. Mp 362°. Exhibits phase transitions at 122°, 215°, 245°

Quinn, R.K., *Mater. Res. Bull.*, 1974, **9**, 803 (*synth, cryst struct*)

[AsTh] **IC-000568**

Thorium arsenids

Thorium arsenide (ThAs) [12255-42-4]
AsTh M 306.9
Has NaCl struct.

Thorium arsenide (As$_2$Th$_3$) [12006-47-2]
As_2Th_3 M 925.8
Isostructural with Th_3P_4. Semiconductor

Thorium arsenide (As$_3$Th)
As_3Th M 381.8
Exists in two cryst. forms: α-form (orthorhombic) stable below 1100° is isostructural with Fe_3As_2; β-form (tetragonal) stable above 1100° is isostructural with $ZrAs_2$.

Titanium arsenides

Titanium arsenide (Ti$_5$As$_3$), 10CI [64417-69-2]
As_3Ti_5 M 418.5
Has the Ti_5P_3 struct. Synth. by arc-melting TiAs + Ti in an Ar atm.

Titanium arsenide (Ti$_2$As), 10CI [67115-99-5]
$AsTi_2$ M 170.6
Has the Fe_2As struct. Synth. by arc-melting TiAs and Ti.

Titanium arsenide (Ti$_3$As$_2$), IICI [12256-12-1]
As_2Ti_3 M 464.2
Has the β-Yb_2Sb_3 struct. Synth. by arc-melting slightly impure TiAs in an Ar atm. or by melting TiAs + Ti in an Ar atm. or by melting TiAs + Ti.

Titanium arsenide (Ti$_4$As$_3$), 10CI [64417-66-9]
As_3Ti_4 M 416.3
Has the *anti*-Th_3P_4 struct. Synth. by arc-melting TiAs in an Ar atm.

Titanium arsenide (TiAs), IICI [12255-43-5]
AsTi M 122.8
Has the TiP struct. TiAs forms solid solns. with many binary arsenides. Synth. by reaction of the elements in a silica tube at 700° for 7 days.

Titanium arsenide (TiAs$_2$), 9CI [12006-35-8]
As_2Ti M 197.7
Ti is 8-coordinated in a bicapped trigonal prismatic arrangement. Synth. by heating Ti and As in a silica tube for 30 days.

Uranium arsenides

[54887-11-3]

Uranium arsenide (UAs) [12255-45-7]
AsU M 372.9
NaCl struct. Mp 2542° (under Ar). Dissociates at lower temps. under equilibrium conditions. Type I Antiferromagnet. Magnetic behaviour parallels uranium phosphide. T_N 127K. Volatile at Mp.

Uranium Arsenide (UAs$_4$) [12006-49-4]
As_4U_3 M 1013.7
Has Th_3P_4 struct. Air-stable iron-grey microcryst. Metallic conductor. μ_{eff} = 2.81 μ_B (θ 200°). Ferromagnetic, T_c 198K. μ_{eff} (ordered) = 1.71μ_B. V. anisotropic magnetisation.

Uranium arsenide (UAs$_2$) [12006-36-9]
Uranium diarsenide
As_2U M 387.8
Struct. resembles Fe_2As. μ_{eff} = 2.94μ_B (θ 34°). antiferromagneitic, T_N 283K. μ_{eff} (ordered) = 1.61μ_B. Strong magnetic anisotropy.
b Not stable in air. Ignites at 550°

Vanadium arsenides

Vanadium arsenide (V$_3$As), IICI [57284-35-2]
AsV_3 M 176.8
Struct. unknown; unit cell is hexagonal. Synth. by arc melting the component elements.

Vanadium arsenide (V$_2$As$_3$), IICI [12256-13-2]
As_3V_2 M 479.4
The α-form is isostructural with α-W_2Bi_3. The β-form has the Y_2Bi_3 struct. while the γ-form is isostructural with β-Yb_2Sb_3; the last two are closely similar and similar to Rh_2Ge_3. The α-form is synth. by arc-melting V + $VAs_{0.95}$; the β-form by heating V + As to 1000° in an evacuated SiO_2 tube; the γ-form by arc-melting V + As.

Vanadium arsenide (V$_3$As$_2$), IICI [12256-02-9]
As_2V_3 M 302.6
Structure comprises bcc arrangement of V with As in a trigonal prismatic array and is related to that of Ti_3Te_4 in which V is in octahedral voids in the latter struct. Synth. by heating V and As in an evacuated SiO_2 tube.

Vanadium arsenide (V$_4$As$_3$), IICI [39357-32-9]
As_3V_4 M 428.5
The α-form has the Nb_3As_3 struct. while the β-form is isostructural with Cr_4As_3. Defect structs. of this phase have been described. The α-form is synth. at rel. low temps. by vapour phase transport and the β-form is obt. by arc-melting the α-form.

Vanadium arsenide (VAs), IICI [12044-34-7]
AsV M 125.8
There is no evidence for magnetic ordering either in susceptibility data or neutron diffraction to 4K. Isostructural with MnP. Synth. by heating V and As to 850° in a sealed SiO_2 ampoule for 8 days then repeatedly annealing. There is no range of homogeneity around the 1:1 composition. Solid solns. $V_{1-x}Ti_xAs$ ($0 < x < 0.23$) are also known and have the MnP struct. $VP_{1-x}As_x$ phases are also known.

[AsZn] **IC-000572**

Zinc arsenides

Zinc arsenide (Zn$_3$As$_2$) [12006-40-5]
As_2Zn_3 M 346.0
Exists in α (face-body centred), α′ (tetragonal) and β (fluorite type) forms with transition temps. α → α′ 161°, α′ → β 672°. Synth. from elements. Commercially available. Grey solid; ferroelectric. Mp 1015°.

Zinc arsenide (ZnAs$_2$) [12044-55-2]
As_2Zn M 215.2
Two distinct Zn and 4 distinct As sites; Zn bonded to 4As, As bonded to 2Zn and to 2As; As atoms arranged in semi-spiral chains. No Zn—Zn bonding. Synth. from elements. Used in Zn diffusion doping of group IIIA pnictides. Grey-black orthorhombic cryst. Mp 771° (under As pressure of 3.3 atm.). Subl. at Mp. Semiconductor; cathodoluminescent. Markedly anisotropic w.r.t. optical and elect. props.

Zirconium arsenides

At least five phases have been reported but not extensively studied.

Zirconium arsenide (Zr$_3$As), IICI [12255-49-1]
$AsZr_3$ M 348.5
Isostructural with Ti_3P. Synth. by heating the elements in a sealed silica tube.

Zirconium arsenide (Zr_3As_3), *1ICI* [60240-83-7]
As_3Zr_3 M 423.5
Isostructural with Hf_3P_3. Synth. by heating the elements to 900° in a sealed tube and arc-melting the product.

Zirconium arsenide (Zr_5As_3), *1ICI* [60240-84-8]
As_3Zr_5 M 1104.4
Isostructural with Nb_5P_3. Synth. by heating the elements to 900° in a sealed tube and arc-melting the product.

Zirconium arsenide (*ZrAs*), *1ICI* [60909-47-9]
AsZr M 166.1
High temp., α-ZrAs has the NaCl struct., the low-temp. β-form has the TiP struct. Synth. by heating Zr and As in a sealed tube at 900° and arc-melting the product.

Zirconium arsenide ($ZrAs_2$), *1ICI*
As_2Zr M 241.0
$PbCl_2$ struct. Synth. by heating the elements in a sealed tube.

Trzebiatowski, W. *et al*, *Pol. J. Chem. (Rocz. Chem.)*, 1958, **32**, 189; *CA*, **52**, 17879e (*synth, cryst struct, $ZrAs_2$*)

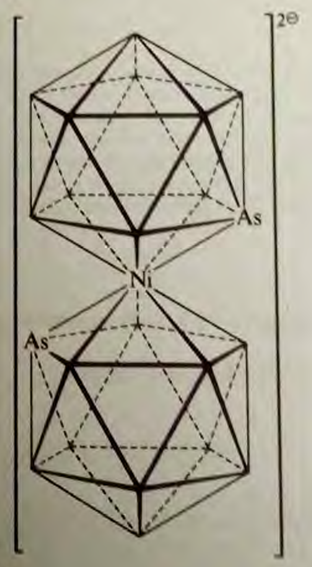
IC-000579

$As_2B_{20}H_{20}Ni^{2\ominus}$
Bis[(7,8,9,10,11-η)-decahydro-7-arsaundecaborato(2−)] nickelate(2−)



M 444.9 (ion)
Bis-Me_4N salt: [65036-31-9].
Reddish-orange cryst. Sol. MeCN, DMF.

Little, J.L. *et al*, *Inorg. Chem.*, 1978, **17**, 584 (*synth, ir, B-11 nmr, pmr*)

IC-000580

As_2BaZn_2
Barium zinc arsenide ($BaZn_2As_2$)
Barium arsenidozincate(1−) (1:2)
[66540-82-7]

$BaZn_2As_2$

M 417.9
3D struct. with edge and corner shared $ZnAs_4$ tetrahedra with Ba in holes in the network. Synth. from the elements. Orthorhombic cryst.

Klufers, P. *et al*, *Z. Naturforsch., B*, 1978, **33**, 151 (*synth, cryst struct*)

IC-000581

$As_2Br_3Cd_4$
Cadmium arsenide bromide ($Cd_4As_2Br_3$)
[61178-85-6]

$Cd_4As_2Br_3$

M 839.1
Isomorphous with $Cd_4P_2X_3$ (X = Cl, Br or I) and $Cd_4As_2I_3$. Semi-conductor. Dark-red solid.

Suchow, L. *et al*, *J. Electrochem. Soc.*, 1963, **110**, 766 (*synth, powder struct*)
Kikineshi, A.A. *et al*, *Izv. Vyssh. Uchebn. Zaved., Fiz.*, 1984, **27**, 110; *CA*, 1985, **102**, 37849 (*photoelectric effect*)

IC-000582

$As_2Br_3Hg_4$
Mercury arsenide bromide ($Hg_4As_2Br_3$)

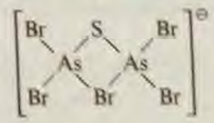
$Hg_4As_2Br_3$

M 1191.9
Isotypic with $Hg_4Sb_2I_3$ etc. Prepd. from As, Hg and Hg_2Br_2. Dark-green solid; slow dec. in daylight; slow dec. in H_2O at 100°; stable in air. Poorly sol. in most solvs.

Puff, H. *et al*, *Z. Anorg. Allg. Chem.*, 1965, **341**, 217 (*synth, powder struct*)

IC-000583

$As_2Br_5S^{\ominus}$
μ-Bromotetrabromo-μ-thioxodiarsenate(*III*)(1−)



M 581.4 (ion)
Ph_4P salt: [102723-46-6].
Synth. from As_2S_3 + Ph_4PBr + HBr(g) in CH_2Br_2. Monoclinic, orange cryst. (cyclohexane). Sol. CH_2Br_2, CH_2Cl_2; insol. toluene, alkanes. The atoms in the anion possess distorted tbp geometry with common edge formed by S and Br atoms. Interatomic distances (mean): As—S 223.9, As—Br (bridge) 283.9, As—Br (terminal) 235.5-249.0 pm: angles: AsBrAs 77.1°, AsSAs 104.9°. Reacts with H_2O → Arsenic sulfide (As_2S_3), IC-000645.

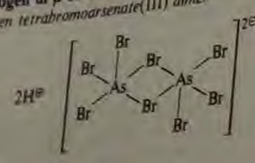
Müller, U. *et al*, *Z. Anorg. Allg. Chem.*, 1986, **533**, 65 (*synth, ir, raman, cryst struct*)

IC-000584

$As_2Br_4H_2$

Dihydrogen di-μ-bromohexabromodiarsenate, 11Cl

Hydrogen tetrabromoarsenate(III) dimer



M 791.0

Bis(N-Methylaniline) salt: [93400-87-4].
Synth. from $AsBr_3$ + PhNHMe in MeCN. Light yellow cryst. Discrete anions with octahedrally coordinated As atoms linked through shared Br atoms. Interatomic distances: As—Br_{term} 234.7, 237.2, 238.7; As—Br_{br} 315.2, 320.3 pm.

Kaub, J. *et al, Z. Naturforsch., B*, 1984, **39**, 1257 (*synth, cryst struct*)

IC-000585

As_2CaMn_2

Calcium manganese arsenide ($CaMn_2As_2$)

$CaMn_2As_2$

M 299.7
Isomorphous with $CaMn_2P_2$. Synth. by heating mixtures of the elements under Ar in a corundum crucible at 900° for 10 h. Crystalline metallic grey black powder; dec. slowly in damp air. Sol. mineral acids. Corresp. Sr and Ba compds. also known.

Mewis, A., *Z. Naturforsch., B*, 1978, **33**, 606 (*synth, props, cryst struct*)
Brunner, E., *Z. Naturforsch., B*, 1978, **33**, 820 (*synth, props, cryst struct*)

IC-000586

As_2CaZn_2

Calcium zinc arsenide ($CaZn_2As_2$)

Calcium arsenidozincate(1−) (1/2)

[62617-34-1]

$CaZn_2As_2$

M 320.7
Struct. resembles $CaAl_2Si_2$. Synth. from the elements. Trigonal cryst.

Klüfers, P. *et al, Z. Naturforsch., B*, 1977, **32**, 353, 753 (*synth, cryst struct*)

IC-000587

$As_2Cd_2O_7$

Cadmium pyroarsenate

Cadmium diarsenate (2-), 11Cl

[68574-20-9]

$Cd_2As_2O_7$

M 486.6
Monoclinic. Synth. from As_2O_5 + CdO at 700°. Dihydrate obt. in the As_2O_5-CdO-H_2O system at 25°. Also synth. by heating $CdAsHO_4$ at 180-200°. Solid.

[66473-70-9]

Bel Kasem Ouanzine, *et al, Compt. Rend. Hebd. Seances Acad. Sci. Sect. C*, 1970, **286**, 197 (*synth*)

IC-000588

$As_2Cd_3O_8$

Cadmium arsenate ($Cd_3(AsO_4)_2$)

Cadmium orthoarsenate

[25160-35-4]

$Cd_3(AsO_4)_2$

M 615.0
Prepd. from $CdSO_4$ + Na_2HAsO_4. Cryst. The struct. is similar to that of the mineral graftonite.

Klement, R. *et al, Z. Anorg. Allg. Chem.*, 1964, **334**, 27 (*synth*)
Engel, G. *et al, Z. Kristallogr., Kristallogeom., Kristallphys., Kristallchem.*, 1970, **132**, 332 (*cryst struct*)

IC-000589

$As_2Cd_4Cl_2$

Cadmium arsenide chloride ($Cd_4As_2Cl_2$)

$Cd_4As_2Cl_2$

M 705.8
Obt. from $CdCl_2$, Cd_3As_2 and As. Deep-red light- and air-stable solid. Isotypic with $Cd_4Sb_2I_2$. Slowly attacked by cold dil. acids and bases.

Puff, H. *et al, Z. Anorg. Allg. Chem.*, 1966, **343**, 259 (*synth, powder struct*)

IC-000590

$As_2Cd_4I_2$

Cadmium arsenide iodide ($Cd_4As_2I_2$)

[57142-92-4]

$Cd_4As_2I_2$

M 980.2
Cd atoms in pseudo cubic face-centred struct.; half As form As—As bonds, which are the shortest bonds in the struct. Semiconductor. Red solid. Isomorphous with $Cd_4As_2Br_2$ and $Cd_4P_2X_2$ (X = Cl, Br or I).

IC-000591

$As_2Cl_4F_6$

Tetrachloroarsenic(1+) hexafluoroarsenate(1−), 9Cl, 8Cl

Tetrachloroarsonium hexafluoroarsenate

[16871-69-5]

$[Cl_4As]^{\oplus}[AsF_6]^{\ominus}$

M 405.6
Tetrahedral cation associated with octahedral anion in solid state. In vapour phase has the covalent struct. Arsenic chloride fluoride ($AsCl_2F_3$), IC-000448. Synth. from $AsCl_3$ + F_2 at −20° or from AsF_3 + Cl_2 at 0°. Colourless, v. hygroscopic cryst. Reacts with Et_2O. Sol. AsF_3 (in which an electrolyte), acetic acid and acetic anhydride. Mp 130° (sealed tube) dec., Mp *ca* 160° (open tube) dec.

Kolditz, L., *Z. Anorg. Allg. Chem.*, 1955, **280**, 313 (*synth, props*)

IC-000592

$As_2Cl_4O_3$

Diarsenic tetrachloride trioxide

Diarsenic tetrachloride, 10Cl. Arsenic chloride oxide ($As_2Cl_4O_3$). Pyroarsenic chloride

[60646-37-9]

$[As_2Cl_4O_3]_n$

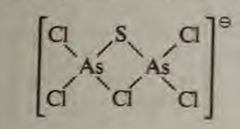
M 339.6
Polymeric; not isostructural with Diphosphoryl chloride, IC-017103. Synth. from $AsCl_3$ + O_3 in $CFCl_3$ at r.t. Stable to 150-200°.

Seppelt, K. *et al, Z. Anorg. Allg. Chem.*, 1978, **439**, 5 (*synth, ir, raman, ms*)

IC-000593

$As_2Cl_5S^{\ominus}$

μ-Chlorotetrachloro-μ-thioxodiarsenate(*III*)(1−), 11Cl



M 359.1 (ion)

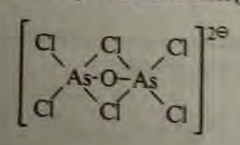
Ph_4P salt: [99021-99-5].
Synth. from As_2S_3 or As_2S_5 + Ph_4PCl + HCl in CH_2Cl_2. Monoclinic pale yellow cryst. Distorted tbp struct. (incl. lone pair) with two pyramids sharing edge between S and Cl. Interatomic distances: As—Cl (bridge) 270.4, As—S 222.7 (mean), As—Cl (terminal) 218.4-230.3 pm; angles: AsSAs 104.0°, AsClAs (bridge) 80.9°.

Mohammed, A.T. *et al, Z. Anorg. Allg. Chem.*, 1985, **523**, 45 (*synth, ir, raman, cryst struct*)

IC-000594

$As_2Cl_6O^{2\ominus}$

Di-μ-chlorotetrachloro-μ-oxodiarsenate(*V*)(2−), 11Cl



M 378.5 (ion)

Di-H compd.: Dihydrogen di-μ-chlorotetrachloro-μ-oxodiarsenate(V)(2−), 11Cl
$As_2Cl_6H_2O$ M 380.5

Bis-pyridinium salt:
$C_{10}H_{12}As_2Cl_6N_2O$ M 538.7
Synth. from $AsCl_3$ + Py.HCl + MeCN aq. Cryst. (MeCN). The two As polyhedra share a Cl,Cl,O face. Interatomic distances: As—Cl 224.2, 226.5 (terminal), 283.6, 296.5 (non-terminal), As—O 176.5 pm.

Kaub, J. *et al, Z. Naturforsch., B*, 1984, **39**, 1252 (*synth, cryst struct*)

IC-000595

$As_2Cl_6S^{2\ominus}$

Di-μ-chlorotetrachloro-μ-thioxodiarsenate(2−), 11Cl

$[As_2Cl_6S]^{2\ominus}$

M 394.6 (ion)

Bis-Ph_4P salt: [95908-46-6].
Synth. from As_2S_3 + $[Ph_4P]Cl$/HCl/1,2-dichloroethane. Colourless needle like cryst. +1 1,2-dichloroethane. Triclinic. Arsenic atoms have distorted octahedral coordination, two octahedra sharing a common face. Lone e.p's are *trans* to sulfur.

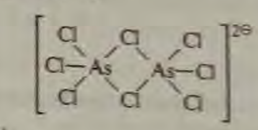
Mohammed, A.T. *et al, Z. Anorg. Allg. Chem.*, 1985, **523**, 45 (*synth, ir, raman, cryst struct*)

IC-000596

$As_2Cl_8^{2\ominus}$

Di-μ-chlorohexachlorodiarsenate(2−), 11Cl

Octachloroarsenate(2−)



M 433.4 (ion)

Bis-Ph_4P salt: Synth. from $AsCl_3$ + Ph_4PCl, or As_2S_3 + Ph_4PCl + HCl in CH_2Cl_2. Pale yellow, rhombic cryst. Triclinic. Anion has two square pyramids sharing basal edge. Interatomic distances: As—Cl (bridge) 274.6, 294.1. As—Cl (terminal) 217.9-230.3 pm; angles: AsClAs (bridge) 98.7°, ClAsCl (ring) 81.3°.

Di-H compd.: see *Dihydrogen di-μ-chlorohexachlorodiarsenate(III)(2−), IC-000597*

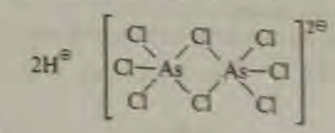
Mohammed, A.T. *et al, Acta Crystallogr., Sect. C*, 1985, **41**, 329 (*synth, ir, raman, cryst struct*)
Mohammed, A.T. *et al, Z. Anorg. Allg. Chem.*, 1985, **523**, 45 (*synth*)

IC-000597

$As_2Cl_8H_2$

Dihydrogen di-μ-chlorohexachlorodiarsenate(*III*)(2−), 11Cl

Hydrogen tetrachloroarsenate(III) dimer



M 435.4

Bis-(N-Methylaniline) salt: [93057-60-4].
Synth. from $AsCl_3$ + PhNHMe in HCl (aq.) at r.t. Small colourless leaflets. Discrete anions with pseudo-octahedral coordination for each As atom. Interatomic distances: As—Cl (terminal) 219.7, 221.0, 220.4, As—Cl (bridge) 303.5, 306.3 pm.

Kaub, J. *et al, Z. Naturforsch., B*, 1984, **39**, 1252 (*synth, cryst struct*)

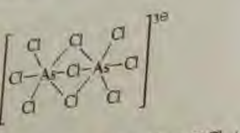
IC-000598

$As_2Cl_8Cs_2$

Tricaesium tri-μ-chlorohexachlorodiarsenate(*III*)(3−), 10Cl

Caesium nonachlorodiarsenate. Caesium enneachlorodiarsenate(III). Caesium chloroarsenate

[71876-08-9]



M 867.6

Hexagonal. As—Cl 225 and 275 pm. Synth. from CsCl + $AsCl_3$. Golden cryst. Dissoc. at 310° to give CsCl + $AsCl_3$.

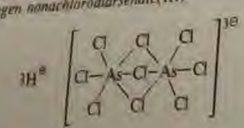
Heard, J.L. *et al*, *J. Chem. Phys.*, 1935, **3**, 117 (*cryst struct*)
Zalewicz, M. *et al*, *Pol. J. Chem. (Rocz. Chem.)*, 1979, **53**, 1437 (*synth, prop*)

IC-000599

$As_2Cl_4H_3$

Trihydrogen tri-μ-chlorohexachlorodiarsenate(3−)

Trihydrogen nonachlorodiarsenate(III)



M 471.9

Tris-Py salt: [91057-62-6].
$C_{15}H_{18}As_2Cl_9N_3$ M 709.2
Synth. from $AsCl_3$ + Py.HCl in MeCN at r.t. Colourless leaflets + 1MeCN (MeCN). Discrete anions with confacial octahedrally coordinated As atoms. Interatomic distances: As—Cl (bridge) 282.9-308.0; As—Cl (terminal) 221.4-230.0 pm.

Kunk, J. *et al*, *Z. Naturforsch., B*, 1986, **39**, 1252 (*synth, struct*)

IC-000600

$As_2Co_2O_7$

Cobalt(*II*) pyroarsenate

Cobalt(2+) diarsenate (2:1), 1/2/3. Arsenic acid ($H_4As_2O_7$), cobalt(2+) salt (1:2), 8Cl

[26839-15-4]

$Co_2As_2O_7$

M 379.7

Orthorhombic lattice (melanc). Polymorph of the thortveitite struct. Synth. from CoO + As_2O_5 at 600°, or from $CoCl_2$ + $Na_4As_2O_7$. Dark purple solid. Insol. H_2O. Mp ~1125°

Tayne, J.B. *et al*, *Can. J. Chem.*, 1958, **36**, 597 (*synth*)
Ding, J. *et al*, *Can. J. Chem.*, 1970, **48**, 388 (*synth*)

IC-000601

$As_2Cu_3O_8$

Copper arsenate ($Cu_3(AsO_4)_2$)

Copper arsenate (3:2), 1/2/3. Copper(2+) orthoarsenate

[7778-41-8]

$Cu_3(AsO_4)_2$

M 468.4

Polymorphic. In combination with metal chromates, used extensively as a wood preservative.

I-form

Lammerite

Struct. comprises α-PbO_2-type chains of octahedrally coordinated Cu atoms in layers linked by AsO_4 tetrahedra and additional Cu octahedra. Mineral from Bolivia and Namibia. Synth. from As_2O_3 + CuO + H_2O. Monoclinic cryst.

II-form

Two AsO_4 anions have As—O 168 pm and 170 pm. The three cations are 5 coordinated to oxygens. One of Cu's is tbp coordinated. Synth. from Na_2HAsO_4 + $CuCl_2$. Green monoclinic needles or plates.

III-form

Triclinic. Synth. from As_2O_3 + $Cu(NO_3)_2.2H_2O$ + Fe. Emerald green cryst.

[13478-34-7, 54496-60-5]

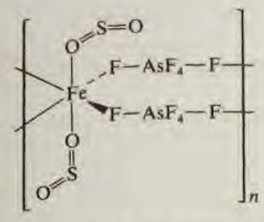
IC-000604

$As_2F_{12}FeO_4S_2$

Bis[hexafluoroarsenato(1−)-*F*]bis(sulfur dioxide-*O*) iron(*II*), 11Cl

[83778-90-9]



M 561.8

Polymeric struct. Should not be formulated as $[Fe(SO_2)_2]^{2\oplus}(AsF_6^{\ominus})_2$. Synth. e.g. by oxidation of Fe using AsF_5 in liq. SO_2 or from $FeBr_2$ + $AgAsF_6$ in liq. SO_2, or from FeF_2 + AsF_5 in liq. SO_2. Sol. liq. SO_2.

Hoppenheit, R. *et al*, *Z. Naturforsch., B*, 1982, **37**, 1116 (*synth, ir, uv, analogue*)

IC-000605

$As_2F_{12}Hg$

Mercury hexafluoroarsenate

Hexafluoroarsenate(1−) mercury(2+) salt (2:1)

[81492-21-9]

$Hg(AsF_6)_2$

M 578.4

Solid. Dec. on heating in Ar with release of AsF_5.

Frlec, B. *et al*, *J. Fluorine Chem.*, 1982, **19**, 485; **20**, 217 (*synth, ir, powder struct, thermal anal*)

IC-000606

$As_2F_{12}Hg_4$

Tetramercury bis-hexafluoroarsenate

[51383-33-6]

$[Hg—Hg—Hg—Hg](AsF_6)_2$

M 1180.1

Contains linear $Hg_4^{2\oplus}$ cations and octahedral $AsF_6^{\ominus}$ anions. Short interactions between cations lead to non-linear chains running through cryst. Synth. from Hg and AsF_5 in SO_2. Red-black needles (SO_2). In soln., is in equil. with $Hg_{2.85}(AsF_6)_2$ and $Hg_3(AsF_6)_2$.

Cutforth, B.D. *et al*, *J. Chem. Soc., Chem. Commun.*, 1973, 723 (*synth, cryst struct, raman, uv*)

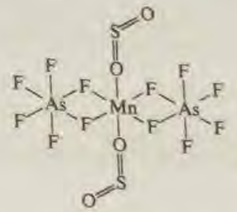
IC-000608

$As_2F_{12}MnO_4S_2$

Bis[hexafluoroarsenato(1−)-*F*]bis(sulfur dioxide-*O*) manganese, 11Cl

Manganese(II) hexafluoroarsenate bis(sulfur dioxide)

[83778-88-5]



M 560.8

Synth. from Mn powder, SO_2 and AsF_5.

Hoppenheit, R. *et al*, *Z. Naturforsch., B*, 1982, **37**, 1116 (*synth, ir, struct*)
Gmelin Handbook Inorg. Chem., Syst. No. 56, 1990, C7, 112 (*rev, bibl*)

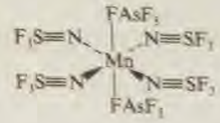
IC-000609

$As_2F_{24}MnN_4S_4$

Bis(hexafluoroarsenato)tetrakis(thiazyltrifluoride) manganese(*II*)

Bis[hexafluoroarsenato(1−)-F]tetrakis(mononitrogen trifluoride monosulfide-N)manganese, 10Cl

[77330-60-0]



M 845.0

Synth. from $Mn(SO_2)_2(AsF_6)_2$ and $N{\equiv}SF_3$. Colourless cryst. (SO_2 or SO_2ClF/SO_2), extremely sensitive to O_2 and moisture. Mp 226°.

[71790-13-1]

Schnepel, F.M. *et al*, *J. Mol. Struct.*, 1980, **60**, 89 (*ir*)
Buss, B. *et al*, *J. Chem. Soc., Dalton Trans.*, 1981, 61 (*synth, ir, cryst struct*)

IC-000610

As_2Fe

Iron arsenide ($FeAs_2$)

Arsenoferrite. Iron diarsenide

[12006-21-2]

$FeAs_2$

M 205.6

Has compressed marcasite struct. Obt. by direct combination of elements. Semiconductor (band gap 0.22eV). Source of arsenic. Silver-grey cubic cryst. Insol. H_2O; sl. sol. HNO_3; insol. HCl. Mp 980°. Antiferromagnetic.

Mineral-form [12255-65-1]
Ludlingite. *Loellingite*
Occurs widely in USA, Canada and Europe. Silver-white to steel grey opaque metallic cryst.

Holseth, H. *et al*, *Acta Chem. Scand.*, 1968, **22**, 3273 (*crystal composition*)

$As_2Fe_2O_8$
Iron(*II*) arsenate ($Fe_2(AsO_4)_2$)
Ferrous arsenate. Iron(II) ortho-*arsenate*
[10102-50-8]

$Fe_2(AsO_4)_2$

M 445.3
Occurs naturally as octahydrate.
▷ NO4580000.
Hexahydrate:
$As_2Fe_2H_{12}O_{14}$ M 553.4
Synth. from $FeSO_4$ + Na_3AsO_4. Insecticide. Green powder. Insol. H_2O; sol. acid. Dec. on heating.
Octahydrate. Symplesite. Parasymplesite
Symplesite is found filling cavities in löllingite, in US, Canada, Germany, Mexico and Morocco.
Parasymplesite occurs in Japan, Morocco, US and Germany. Dimorphic mineral. Indigo blue, light green or light blue powder (Symplesite), or light green- blue cryst. (Parasymplesite).
Gmelin Handbook Inorg. Chem., Syst. No 59, 1931, **B4**, 780 (*rev, bibl*)

IC-000612

$As_2Fe_4O_{11}$
Iron(*III*) arsenate oxide ($Fe_4(AsO_4)_2O_3$)
Angelellite
[12418-53-0]

$Fe_4O_3(AsO_4)_2$

M 549.2
Mineral. Blackish brown.

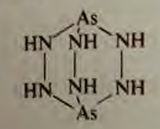
IC-000616

$As_2H_6N_6$
2,3,5,6,7,8-Hexaaza-1,4-diarsa[2.2.2]bicyclooctane
Diarsenic tris(hydrazide)



M 239.9
2,3,5,6,7,8-Hexamethyl. Diarsenic tris(N,N'-*dimethylhydrazide*)
$C_6H_{18}As_2N_6$ M 324.0
Synth. from $As(NMe_2)_3$ + 1,2-dimethylhydrazine. Colourless cryst. V. sol. C_6H_6, toluene, Et_2O, THF; sol. pet. ether. Mp 97-99°.
Nöth, H. *et al*, *Z. Naturforsch., B*, 1965, **20**, 604 (*synth, ir*)

As_2Hg_3 **IC-000617**
Mercury(*II*) arsenide (Hg_3As_2)

Hg_3As_2

M 751.6
Black solid.
▷ Readily oxidised, spontaneously flammable when dry.
Brukl, A., *Z. Anorg. Allg. Chem.*, 1923, **131**, 236 (*synth*)

$As_2Hg_3O_8$ **IC-000618**
Mercury(*II*) arsenate ($Hg_3(AsO_4)_2$)
Mercuric orthoarsenate
[13437-80-4]

$Hg_3(AsO_4)_2$

M 879.6

Obt. from the As_2O_5—HgO—H_2O system. Yellow microcryst. needles. Pract. insol. H_2O. Mp 575° dec.
Guerin, H. *et al*, *Compt. Rend. Hebd. Seances Acad. Sci.*, 1950, **230**, 447; 1951, **232**, 65 (*synth*)

IC-000619

$As_2Hg_4I_2$
Mercury arsenide iodide ($Hg_4As_2I_2$)
[12255-76-4]

$Hg_4As_2I_2$

M 1332.9
Struct. is described as either a pseudo-cubic close packing of Hg atoms with As and I in the interstices or a complex arrangement of two polyhedra surrounding Hg, sharing edges or corners. Short As—As bonds in the solid state. Isostructural with $Cd_4As_2I_2$. Prepd. from As, Hg and Hg_2I_2. Black cryst. Semiconductor. Resistant to non-oxidising acids. Slow dec. in H_2O at 100°.
Puff, H. *et al*, *Z. Anorg. Allg. Chem.*, 1965, **341**, 217 (*powder struct, synth*)
Labbé, P.L. *et al*, *Z. Kristallogr.*, 1989, **187**, 117 (*synth, cryst struct*)

IC-000620

As_2I_4
Arsenic iodide (As_2I_4), 10CI
Diarsenic(III) *tetraiodide. Tetraiododiarsenic*(III)
[13770-56-4]

I_2AsAsI_2

M 657.4
Synth. from As or AsI_3 + I_2 at 240-260° in sealed tube. Red cryst. Stable in inert atm. to 150°. Readily dec. by air or H_2O. Disproportionates on heating becoming quantitative at 400°. Mp 137°.
Chernov, A.P. *et al*, *Zh. Neorg. Khim.*, 1973, **18**, 2876; *Russ. J Inorg. Chem. (Engl. Transl.)*, 1973, **18**, 1530 (*props, form*)
Brauer, G., *Handbuch Präp. Anorg. Chem.*, 3rd Ed., Ferdinand Enke Verlag, 1975-1981, **1**, 575 (*synth*)
Bastow, J.J. *et al*, *J. Magn. Reson.*, 1980, **37**, 269 (*synth, nqr*)

$As_2MnS_5Tl_2$ **IC-000621**
Manganese thallium arsenide sulfide ($MnTl_2As_2S_5$)

$MnTl_2As_2S_5$

M 773.8
Shows orthorhombic symmetry. The Tl is surrounded irregularly by 6 S atoms, Mn comprises sl. distorted MnS_6 octahedra, and the As atom has trigonal pyramidal coordination with 3 S atoms. Forms between 230-260° at 5-18 atm. under hydrothermal conditions. Dark brown cryst.; thin sections are red in transmitted light.
Gostojić, M. *et al*, *Z. Kristallogr.*, 1982, **158**, 43 (*synth, cryst struct*)
Gmelin Handbook Inorg. Chem., Syst. No. 56, 1983, **C9**, 369 (*rev, bibl*)

As_2MnSe_4 **IC-000622**
Manganese arsenide selenide ($MnAs_2Se_4$)

$MnAs_2Se_4$

M 520.6
Tetragonal struct. Formed in the MnSe-As_2Se_3 system at 750-800° $Mn_3As_2Se_8$ also known. *p*-type semiconductor. Solid, stable to air and H_2O. Mp 420° (congr.).
Rustamov, P.G. *et al*, *Russ. J. Inorg. Chem. (Engl. Transl.)*, 1978, **23**, 84 (*synth, struct*)
Gmelin Handbook Inorg. Chem., Syst. No. 56, 1983, **C9**, 372 (*rev, bibl*)

As_2MnTe_4 **IC-000623**
Manganese arsenide telluride ($MnAs_2Te_4$)

$MnAs_2Te_4$

M 715.1
Tetragonal struct. Formed in the MnTe-As_2Te_3 system. $Mn_3As_2Te_6$ also known. Mp 605° (congr.).
Rustamov, P.G. *et al*, *CA*, 1979, **91**, 45097 (*prop, struct*)
Gmelin Handbook Inorg. Chem., Syst. No. 56, 1983, **C9**, 374 (*rev, bibl*)

$As_2Mn_2O_7$ **IC-000624**
Manganese(*II*) pyroarsenate
Manganese(2+) *diarsenate* (2:1), 9*CI*
[58593-68-3]

$Mn_2As_2O_7$

M 371.7
Obt. by heating $MnHAsO_4.H_2O$ at ca. 200°; $Mn(NH_4)AsO_4.H_2O$ at 800°; or As_2O_5 + $MnCO_3$ at 600°. Monoclinic lattice.
Botto, I.L., *Monatsh. Chem.*, 1975, **106**, 1559 (*synth, ir, cryst struct*)
Nabar, M.A. *et al*, *Z. Naturforsch., B*, 1978, **33**, 1106 (*synth*)

$As_2Mn_3O_8$ **IC-000625**
Manganese(*II*) arsenate(*V*) ($Mn_3(AsO_4)_2$)

$Mn_3(AsO_4)_2$

M 442.6
The existence of anhydrous $Mn_3(AsO_4)_2$ is doubtful. The monohydrate is present in the $Mn_3(AsO_4)_2$—H_3AsO_4—H_2O system. The tetrahydrate is only known as the mineral.
Monohydrate:
$As_2H_2Mn_3O_9$ M 460.6
Synth. by reaction of aq. solns. of Na_3AsO_4 and $MnSO_4$ in a closed tube at *ca.* 175°. Maroon needles.
Tetrahydrate: [77171-60-9]. ***Sterlinghillite***
$As_2H_8Mn_3O_{12}$ M 514.7
Light pink cryst.
Ephraim, F. *et al*, *Helv. Chim. Acta*, 1929, **12**, 1025 (*synth, monohydrate*)
Dunn, P.J., *Am. Mineral.*, 1981, **66**, 182 (*struct, tetrahydrate*)
Gmelin Handbook Inorg. Chem., Syst. No. 56, 1983, **C9**, 325 (*rev, bibl*)

$As_2Na_4O_7$ **IC-000626**
Tetrasodium diarsenate, 9CI
Sodium diarsenate ($Na_4As_2O_7$). *Sodium pyroarsenate. Tetrasodium pyroarsenate*
[13464-42-1]

$Na_4As_2O_7$

M 353.7
Monoclinic. Anion consists of two AsO_4 tetrahedra sharing a common O with bridging angle AsOAs 123.5°, and bridge As—O 178.3 pm. Terminal As—O 165.8 pm. By dehydration of Na_2HAsO_4 at 130-900°, or from

$Na_3AsO_4 + As_2O_5$ at melt. Colourless cryst. Readily sol. H_2O. Mp 848°. A reversible structure phase change is observable at 692°. Dec. > 700° → Pentasodium triarsenate, IC-000659.

Gmelin Handbook Inorg. Chem., Syst. No. 21, 1928, 947; Suppl. Vol., 1967, 4, 1700 (rev, bibl)

IC-000627

As_2O_5

Arsenic oxide (As_2O_5), 9CI, 8CI

Diarsenic trioxide. Arsenious oxide. Arsenic sesquioxide. White arsenic. Arsenous acid anhydride. Arsenous oxide

[1327-53-3]

As_2O_5

M 197.8

Formed on burning As in air, or from $AsCl_3 + H_2O$; from arsenopyrites by roasting. Also by heating Arsenic oxide (As_4O_6), IC-000665 (arsenolite) at 100-200° or higher temp. in absence of H_2O. Probably the most important compound of arsenic. Used in optical glasses and glasses for electronic equipment. Acts as a wood preservative. Occurs as air pollutant from metal smelting plants and power plants. Commercially available. White powder. Sol. H_2O (2.16 g per 100 cm^3 at 25°). Mp 312°. In vap., exists as Arsenic oxide (As_4O_6), IC-000665. With PCl_5 or $POCl_3$ → $AsCl_3$.

▷ Highly toxic. Carcinogenic. Inflames in contact with $NaClO_3$. CG3325000.

Mineral-form [13473-03-5]

Claudetite

Exists in two forms, both monoclinic, differing in arrangement of As atoms placed between puckered layers of oxygen atoms. The mean shorter As—O distances are 177.2 pm (Claudetite I) and 179 pm (Claudetite II).

Dimer: see Arsenic oxide (As_4O_6), IC-000665

IC-000644

As_2Pt

Platinum arsenide ($PtAs_2$), 9CI
[12044-52-9]

$PtAs_2$

M 344.9
Has iron pyrites struct. Synth. from Platinum, IC-021805 + As. Dull grey solid. Dec. above 800°.
▷ Synth. possibly hazardous.

Mineral-form

Sperrylite
Member of pyrite group. Occurs widely. A principal source of Pt. Metallic white cryst.

Sidgwick, N.V., *The Chemical Elements and their Compds.*, Oxford, 1950, 1625.
Wells, A.F., *Structural Inorg. Chem.*, 5th Ed. Oxford, 1984, 760 (*struct*)

IC-000645

As_2S_3

Arsenic sulfide (As_2S_3), 9CI, 8CI
Arsenic(III) sulfide. Diarsenic trisulfide. Arsenic sesquisulfide
[1303-33-9]

As_2S_3

M 246.0
Exists in amorphous and vitreous states as well as cryst. Latter is monoclinic with a layer struct. (*cf.* As_2O_3) with each As bonded pyramidally to 3 × S at 224 pm. From As + S at high temp. in sealed ampoule; from As_2O_3 + S; in colloidal form from $As^{3\oplus}$ + H_2S at pH 1-2. Pigment: identified in mediaeval manuscripts (eg. from Armenia). Semiconductor. Used in optical materials, eg. antireflective layers. Photoconductive and used in hologram recording. Commercially available. Red needles or yellow in polycryst. form. Insol. H_2O. Mp 327° (310°). Bp 710° (extrap.). Sublimes readily below Mp. Vap. consists of As_4S_6 molecules (*cf.* As_4O_6). Burns when heated in air → As_2O_3 + SO_2. Cl_2 → $AsCl_3$ + S_2Cl_2. Dissolves readily in $OH^\ominus$ aq. Boiling Na_2CO_3 soln. → Arsenic sulfide (As_4S_4). IC-000668.
▷ Poison. Carcinogen. CG2638000.

Mineral-form

Orpiment: Yellow arsenic sulfide. Arsenic yellow. King's yellow. C.I. 77086
Occurs in lignite (Czechoslovakia), gold ores (Nevada, U.S.A.; Armenia), hot springs (Japan, and Kamchatka, U.S.S.R.) as well as in Switzerland, Yugoslavia. Yellow solid.

IC-000646

As_2S_5

Arsenic sulfide (As_2S_5), 9CI, 8CI
Diarsenic pentasulfide. Arsenic pentasulfide (incorr.). Arsenic(V) sulfide
[1303-34-0]

As_2S_5

M 310.1
Exists in crystalline and vitreous forms. Synth. by reaction of orthoarsenate solns. + H_2S; or Na_3AsS_4 aq. + $H^\oplus$. Employed in photoimagery. Acoustooptic modulator material. Yellow solid. Dec. in air at *ca.* 95° → S + Arsenic sulfide (As_2S_3), IC-000645. Boiling H_2O → As_2O_3 + S + As_2S_3. Dissolves in solns. of metallic (eg. Gp. I) sulfides giving thioarsenates.
▷ Flammable as dust; explosive with powerful oxidants.

As_2Se_3

Arsenic selenide (As_2Se_3), 9CI, 8CI IC-000649
Diarsenic(III) triselenide. Selenium arsenide. Arsenic sesquiselenide
[1303-36-2]

As_2Se_3

M 386.7
Monoclinic. In cryst. each As atom is surrounded by polyhedron of 7 Se atoms forming distorted tetragonal pyramid and triangular prism, one face of which coincides with base of pyr. Mean As—Se 240 pm. Also known in amorphous and vitreous forms. From As_4Se_4 at 260°; annealing of vitreous form at 320°; As + Se heated *in vacuo* → amorphous form. Photoconductor and important xerographic photoreceptor, props. better than those of Se itself. Semiconductor. Used in glass optical fibres. Commercially available. Cherry red cryst. Mp 380° (370°). Bp 861° (extrap.) (846°).

Vitreous-form

Trigonal struct. Stable, brown, semi-conducting glass. Cryst. at 280° after softening at *ca.* 180-187°. ΔH°_{298} − 122 kJ.

As_2Te_3 IC-000653
Arsenic telluride (As_2Te_3), 9CI, 8CI
Diarsenic(III) tritelluride. Tellurium arsenide. Arsenic sesquitelluride
[12044-54-1]

As_2Te_3

M 532.6
Monoclinic. Parallel layer struct. As(1) coordinated by 6 Te in distorted octahedron, As(2) by 7 Te as tetragonal prism and triangular prism with cojoint base. Also exists in amorphous and vitreous states. A new metastable, rhombohedral form has also been descr. Synth from As + Te. Semiconductor. Component of many laminar glasses. Promising material for memory devices. Commercially available. Grey, needle-like cryst. Mp 360°, Mp 381°.

Amorphous-form
Struct. approximates to that of cryst. form. Corrugated layers but no long-range order. Each As coordinated to 3 Te's, and each Te to 2 As's.

Vitreous-form
By drastic supercooling of melt. Mp 405-410°. Softening temp. *ca.* 140°.

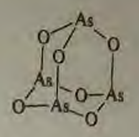
IC-000665

As_4O_6

Arsenic oxide (As_4O_6)

2,4,6,8,9,10-Hexaoxa-1,3,5,7-tetraarsaadamantane. 2,4,6,8,9,10-Hexaoxa-1,3,5,7-tetraarsatricyclo[3.3.1.1^{3,7}]decane, 9CI. Hexa-μ-oxotetraarsenic, 9CI. White arsenic. Arsenic trioxide (incorr.)

[12505-67-8]



M 395.6
Struct. exists in vap. phase. Interatomic distances: As—O 178.7; angles: OAsO 98.3°, AsOAs 128.0°. Isostructural with Phosphorus oxide (P_4O_6), IC-021484. Synth. from $AsCl_3$ + boiling H_2O. White cubic cryst. Mp 278°. Bp 465°. Condensation of vap. at >250° gives vitreous As_2O_3. Cubic struct. retained if rapid condensation at <250°. At > 800° vap. partly → Arsenic oxide (As_2O_3), IC-000627 and dissoc. increases with temp. When heated at 180° with trace H_2O, is converted into Arsenic oxide (As_2O_3), IC-000627. ΔH_f° −657 kJ mol^{-1}.

Monoxide: [86508-52-3].
As_4O_5 M 411.6
Det. in As_2O_3 vap. at 600-700°. Isol. in matrix.

1,3-Dioxide: [106611-12-5].
As_4O_8 M 427.6
Isol. in matrix.

1,3,5-Trioxide: [86508-53-4].
As_4O_9 M 443.6
Det. in As_2O_3 vap. at 600-700°. Isol. in matrix.

Tetraoxide: [12355-85-0]. *Arsenic pentoxide (incorr.). Tetraoxohexa-μ-oxotetraarsenic*
As_4O_{10} M 459.6
Det. in As_2O_3 vap. at 600-700°. Isol. in matrix.

Mineral-form [1303-24-8]
Arsenolite
Secondary mineral. Cubic white cryst., also tinted yellowish, bluish or reddish.

[36533-93-4]

Au

M 196.9

Atomic No. 79. Ground state electron config. [Xe]

$4f^{14}5d^{10}6s^1$. 27 Isotopes are known of which only one, ^{197}Au, is stable. Known to ancient civilisations. Has no biological role. The most electronegative metal. Abundance: 0.004 ppm (earth's crust), 4×10^{-4} ppm (sea water). Has fcc struct. Occurs as native Au or as tellurides. Extracted with Hg or by the cyanide process and pptd. with Zn. Excellent electrical and thermal conductor. Main uses in dentistry, jewellery, electronics and aerospace industries, and as bullion. Soft, yellow, malleable, ductile metal. Forms red, blue or violet colloidal suspensions. Physical props. depend on mechanical treatment. Mp 1064°. Bp 2808°. Stable in dry air at r.t.; and to H_2O, acids (except HNO_3/HCl) and alkalis. Sol. in aq. $CN^{\ominus}$. Unreactive to O_2, S, Se but reacts with Te.

P Non toxic. MD5070000

|AuBa| IC-000679

Barium-gold system

Alloy with two main phases.

Barium gold [66983-46-8]

AuBa M 334.2

Orthorhombic; isostructural with FeB with zigzag chains of atoms.

Barium gold (Ba₃Au₂) [102678-03-5]

Tribarium digold. ***Barium compd. with gold (2:3), 11Cl***

Au_2Ba_3 M 805.9

Er_3Ni_2 struct. type.

Fornasini, M.L. *et al, J. Solid State Chem.*, 1985, **59**, 60 (*synth, cryst struct*)
Fornasini, M.L. *et al, Rev. Chim. Minér.*, 1986, **22**, 791 (*cryst struct*)

|AuBe| IC-000680

Beryllium-gold system

Alloy with two main phases.

Beryllium compd. with gold (1:3) [66104-14-1]

Beryllium trigold

Au_3Be M 599.9

Beryllium compd. with gold (1:1), 11Cl [12044-69-8]

Beryllium gold

AuBe M 205.9

Kao, S.G. *et al, K'uang Yeh*, 1981, **25**, 125; *CA*, 1982, **96**, 10323d (*synth, Au_3Be*)
Borisov, Yu.A., *Zh. Strukt. Khim.*, 1983, **24**, 97 (*theory*)
Chin, A.K. *et al, Appl. Phys. Lett.*, 1984, **45**, 37 (*contacts*)

AuBr IC-000681

Gold(*I*) bromide (AuBr), 10Cl

[10294-27-6]

AuBr

M 276.8

Struct. comprises zig-zag chain of linear gold(*I*) moieties. Cryst. obtained by vapour transport techniques with Br_2 pressures of 2 atm. (210-240°). Occurs in two tetragonal cryst. modifications.

Belton, P.A. *et al, Zh. Prikl. Spektrosk.*, 1977, **26**, 980 (*art*)
Janssen, E.M.W. *et al, J. Less-Common Met.*, 1978, **57**, 247, 255 (*cryst struct, phase trans*)

AuBrSe IC-000682

Gold(*III*) bromide selenide (AuBrSe), 9Cl

[34998-72-2]

AuBrSe

M 355.8

Ribbon struct. with square planar gold(*III*) atoms. Two independent gold sites, one coordinated to two Se and two Br and the other by four Se. Synth. by heating Au and Se in presence of Br_2 in 230-200° temperature gradient. Dark grey metallic cryst.

Rabenau, A. *et al, Monatsh. Chem.*, 1971, **102**, 1425 (*synth*)
Moore, J. *et al, J. Solid State Chem.*, 1975, **4**, 383 (*cryst struct*)

$AuBrTe_2$ IC-000683

Gold bromide telluride ($AuBrTe_2$)

[12523-46-9]

$AuBrTe_2$

M 532.0

Silvery white cryst. with metallic conductivity.

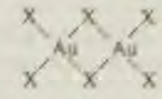
Rabenau, A. *et al, J. Less-Common Met.*, 1970, **21**, 395
Inorg. Synth., 1973, **14**, 160 (*synth*)
Haendler, H.M. *et al, J. Solid State Chem.*, 1974, **10**, 175
Zhou, B.L. *et al, J. Phys. C*, 1981, **14**, 4393 (*electronic props*)

$AuBr_3$ IC-000684

Gold(*III*) bromide ($AuBr_3$), 10Cl

Gold tribromide. Auric bromide

[10294-28-7]



dimer X = Br

M 436.6

Dimeric.

Dimer: [11092-53-8]. *Di-μ-bromotetrabromodigold, 9Cl*

Hexabromodigold

Au_2Br_6 M 873.3

Synth. from gold and excess Br_2 in sealed ampoule at 140° over 4 d. Commercialy available. Dark-red to black cryst. Hydrol. rapidly in moist air.

Batsanov, S.S. *et al, Izv. Akad. Sci. USSR, Ser. Sci. Khim.*, 1971, 1863 (*dimer*)
Lörcher, K.-P. *et al, Z. Naturforsch., B*, 1975, **30**, 662 (*synth, cryst struct*)
Fokina, Z.A., *Koord. Khim.*, 1980, **6**, 1463 (*synth*)

$AuBr_4^{\ominus}$ IC-000685

Tetrabromoaurate(*III*)(1−), 9Cl

[14337-14-5]

$[AuBr_4]^{\ominus}$

M 516.5 (ion)

K salt: [14323-32-1]. *Potassium bromoaurate*
$AuBr_4K$ M 555.6
Prepd. from KBr + Au + Br_2. Commercially available. Reddish-purple cryst. Slowly absorbs water from the atm. to give the dihydrate. V. sol. H_2O, MeOH, EtOH. Mp 120° dec.

H compd: [17083-68-0]. *Bromoauric acid*
$AuBr_4H$ M 517.5
Formed from $AuBr_3$ + aq. HBr. Very hygroscopic, dark red cryst. (+$5H_2O$). V. sol. H_2O; sol. EtOH. Mp 80° dec.

[13005-38-4]

[AuCa] IC-000686

Calcium-gold system

Alloy with varying stoichiometry.

Calcium compd. with gold (1:5) [12006-70-1]
Au_5Ca M 1024.9

Calcium compd. with gold (2:9) [97397-31-4]
Au_9Ca_2 M 1852.8

Calcium compd. with gold (2:7) [97397-30-3]
Au_7Ca_2 M 1458.9

Calcium compd. with gold (1:3) [82678-78-2]
Au_3Ca M 630.9

Calcium compd. with gold (1:2) [12523-45-4]
Au_2Ca M 434.0

Calcium compd. with gold (1:1), 11CI [62683-54-9]
AuCa M 237.0
Isostructural with CrB.

Calcium compd. with gold (5:4) [98240-00-7]
Au_4Ca_5 M 988.2
Monoclinic with struct. based on $AuCa_6$ trigonal prisms linked in pairs through triangular faces. $CaCa_8$ cubes also present.

Calcium compd. with gold (5:3) [93509-35-4]
Au_3Ca_5 M 791.2
Tetragonal Cr_5B_3 struct. type.

Calcium compd. with gold (7:3) [98239-99-7]
Au_3Ca_7 M 871.4
Orthorhombic with struct. based on $AuCa_6$ trigonal prisms. Each gold has 9 Ca neighbours (tricapped trigonal prism arrangement).

Calcium compd. with gold (5:2) [102678-01-3]
Au_2Ca_5 M 594.3
Monoclinic Mn_5C_2 struct. type.

Calcium compd. with gold (3:1) [102678-00-2]
$AuCa_3$ M 317.2
Fe_3Ca struct. type.

[AuCd] IC-000687

Cadmium-gold system

Alloy with three main phases.

Cadmium compd. with gold (1:3) [12006-68-7]
Au_3Cd M 703.3
α_1-phase face centred tetragonal; α_2-phase hcp Mg struct.

Cadmium compd. with gold (1:1) [12044-73-4]
Gold cadmium
AuCd M 309.3
β-(high temp.) phase ordered b.c.c. CsCl struct., β'-phase is orthorhombic.

Cadmium compd. with gold (3:1) [62228-72-2]
$AuCd_3$ M 534.2

Metals Handbook, 8th Ed., 1973, **8**, 266 (*phase diagram*)
Hirabayashi, M. *et al, Electron Microsc. Proc. Eur. Congr. 7th*, 1980, **4**, 142; *CA*, 1982, **96**, 10382x (*electron microsc*)

AuCl IC-000688

Gold(*I*) chloride (AuCl), 10CI

[10294-29-8]

AuCl

M 232.4
Structure comprises zig-zag chain of linear gold moieties. Large cryst. obt. by vapour transport. Metastable with respect to disproportionation at r.t. to Au and Au_2Cl_6.

Janssen, E.M.W. *et al, J. Less-Common Met.*, 1974, **38**, 71 (*synth, cryst struct*)
Strähle, J. *et al, Z. Naturforsch., B*, 1974, **29**, 266 (*cryst struct*)

AuClO IC-000689

Gold chloride oxide (AuClO), 10CI

Gold(III) *oxide chloride*

[54220-51-8]

AuClO

M 248.4
Polymer consisting of linked hexameric rings, of alternating Au and O atoms. Au atoms are square-planar and bonded to one Cl and 3 O atoms. Obt. from Au_2O_3 with conc. $HClO_4$ at 160° in sealed pyrex tube. Red prismatic cryst. Mp 290° dec.

Schwarzmann, E. *et al, Z. Naturforsch., B*, 1974, **29**, 561 (*synth, ir*)
Brauer, G., *Handbuch Präp. Anorg. Chem.*, 3rd Ed., Ferdinand Enke Verlag, 1975-1981, **2**, 1016 (*synth*)

Jones, P.G. *et al, Gold Bull.*, 1980, **13**, 56 (*rev*)

$AuClO_3Se$ IC-000690

Gold chloride selenite, 11CI

Gold(III) *selenite chloride*

[83214-83-9]

$Au(SeO_3)Cl$

M 359.3
Has layer structure with AuO_3Cl, AuO_2Cl_2 and AuO_4 moieties. Synth. from $Au_2Se_4O_{11}$ at 280° in sealed tube. Air stable cryst.

Jones, P.G. *et al, Z. Naturforsch., B*, 1982, **371**, 941 (*synth, cryst struct*)

$AuClTe_2$ IC-000691

Gold chloride telluride ($AuClTe_2$), 9CI

Gold chloride ditelluride

[12523-42-1]

$AuTe_2Cl$

M 487.6
Formulated as $[Au(III)(Te_2)_{4/4}]Cl$. Each gold atom is coordinated to four Te_2 units and each Te_2 unit to four gold atoms, leading to a corrugated two dimensional net of Au and Te atoms. Silvery white cryst.

Rabenau, A. *et al, J. Less-Common Met.*, 1970, **21**, 395 (*synth*)
Inorg. Synth., 1973, **14**, 160 (*synth*)
Haendler, H.M. *et al, J. Solid State Chem.*, 1974, **10**, 175 (*cryst struct*)

$AuCl_3$ IC-000692

Gold(*III*) chloride ($AuCl_3$), 10CI

Gold trichloride. Auric chloride

[13453-07-1]

As Gold(*III*) bromide ($AuBr_3$), IC-000684 with

X = Cl

M 303.3
Dimeric in solid state and vapour phases. Intercalates into graphite.

▷MD5420000.

Dimer: [21563-00-8]. *Di-μ-chlorotetrachlorodigold, 10CI. Hexachlorodigold*
Au_2Cl_6 M 606.6
Synth. from the elements. Commercially available. V. hygroscopic orange-red cryst. (by subl.). Mp 200°.

Clark, E.S. *et al, Acta Crystallogr.*, 1958, **11**, 284 (*synth, cryst struct*)
Brauer, G., *Handbuch Präp. Anorg. Chem.*, 3rd Ed., Ferdinand Enke Verlag, 1975-1981, **2**, 1013 (*synth*)
Vangelesti, R. *et al, Carbon*, 1977, **15**, 327 (*intercalation compd*)

$AuCl_3H_3N$ IC-000693

Amminetrichlorogold(*III*)

Gold(III) *chloride ammine*

H_3NAuCl_3

M 320.3
Square planar struct. Interatomic distances: Au—N 201.2, Au—Cl 228.7, 228.2, 227.7 pm. Formed by thermal dec. of NH_4AuCl_4. Light yellow-green cryst. Dec. to metallic gold above 165°.

Strähle, J. *et al, Z. Anorg. Allg. Chem.*, 1979, **456**, 241 (*synth, cryst struct, ir*)

$AuCl_4^{\ominus}$ IC-000694

Tetrachloroaurate(*III*)(1 –), 9CI

[14337-12-3]

$[AuCl_4]^{\ominus}$

M 338.7 (ion)

Na salt: [15189-51-2]. *Sodium chloroaurate*
$AuCl_4Na$ M 361.7
Prepd. from $HAuCl_4$ + NaCl. Orange-yellow cryst. + $2H_2O$. V. sol. H_2O; sol. EtOH, Et_2O.
▷CK6360000.

K salt: [13682-61-6]. *Potassium chloroaurate*
$AuCl_4K$ M 377.8
Prepd. from $HAuCl_4$ + KCl. Commercially available. Air-stable, light-yellow cryst. + $2H_2O$. Sol. H_2O, EtOH; insol. Et_2O.

H compd: [16903-35-8]. *Chloroauric acid*
$AuCl_4H$ M 339.7
Formed when $AuCl_3$ is dissolved in HCl and when Au is dissolved in aqua regia. Used in photography and in gold plating baths. V. hygroscopic, deliquescent, light-yellow needles + $4H_2O$. V. sol. H_2O, EtOH; sol. Et_2O.

$AuCl_4P$ IC-000695

Chloro(phosphorous trichloride)gold, 9CI

Chloro(trichlorophosphine)gold(I). *Gold*(I) *chloride trichlorophosphine*

[60949-98-6]

Cl_3PAuCl

M 369.7
Struct. comprises zig-zag chains of linear Cl_3PAuCl molecules. V. moisture-sensitive white cryst. solid ($SOCl_2$).

Arai, G.J., *Recl. Trav. Chim. Pays-Bas (J. R. Neth. Chem. Soc.)*, 1962, **81**, 307 (*cryst struct*)

AuCs IC-000696

Caesium gold (CsAu)

Gold compd. with caesium (1:1), 10CI

[12256-37-0]

CsAu

M 329.8
Has the CsCl struct. Sometimes regarded as $Cs^{\oplus}Au^{\ominus}$. Bright yellow alloy. Semi-conductor with excess Cs in lattice primary source of conduction electrons.

Tinelli, G.A. *et al, J. Solid State Chem.*, 1978, **25**, 157 (*cryst struct, Cs-133 nmr*)

IC-000697

AuCsO
Caesium gold(*I*) oxide, 11Cl
[23324-67-6]

CsAuO

M 345.8
Moisture-sensitive yellow solid. Tetragonal.
Wasel-Nielen, H.D. *et al*, *Z. Anorg. Allg. Chem.*, 1968, **359**, 36 (*synth*)
Klassen, H. *et al*, *Z. Anorg. Allg. Chem.*, 1982, **485**, 101 (*rev*)

IC-000698

AuF_3
Gold(*III*) fluoride (AuF_3), 9Cl
Gold trifluoride
[14720-21-9]

AuF_3

M 253.9
Helical fluorine bridged polymer, square planar about gold, but with weak cross linking between chains. Synth. from Au and F_2 in monel vessel at 350°. Golden yellow needles (by subl.).
Sharpe, A.G., *J. Chem. Soc.*, 1949, 2901 (*synth*)
Einstein, F.W.B. *et al*, *J. Chem. Soc. A*, 1967, 478 (*synth, cryst struct*)

IC-000699

$AuF_4^\ominus$
Tetrafluoroaurate(*III*)(1−)

$[AuF_4]^\ominus$

M 272.9 (ion)
Square planar Au(*III*).
Na salt: [31241-07-3].
AuF_4Na M 295.9
K salt: [24887-81-8].
AuF_4K M 312.0
Synth. from BrF_3, gold powder and KCl. Yellow cryst.
Edwards, A.J. *et al*, *J. Chem. Soc. A*, 1969, 1936 (*synth, cryst struct*)
Charlton, J.S. *et al*, *J. Chem. Soc. A*, 1970, 1484 (*mössbauer*)
Hoppe, R. *et al*, *Z. Anorg. Allg. Chem.*, 1970, **379**, 122 (*cryst struct*)

$AuF_6^\ominus$ **IC-000700**
Hexafluoroaurate(1−)

$[AuF_6]^\ominus$

M 310.9 (ion)
Unusual example of octahedral Au(*V*).
Cs salt: [39043-78-2].
$AuCsF_6$ M 443.8
Can be obt. directly from $CsAuF_4$ and F_2.
$O_2^\oplus$ salt: [37237-60-8].
AuF_6O_2 M 342.9
Synth. from $CsAuF_4$, O_2 and F_2.
$Xe_2F_{11}^\oplus$ salt: [39043-77-1].
$AuF_{17}Xe_2$ M 782.5

Synth. from AuF_3, F_2 and XeF_6 at 400° and 70 atm. Pale yellow-green cryst. Mp 145-150°.
Leary, K. *et al*, *J. Chem. Soc., Chem. Commun.*, 1972, 903; 1973, 131 (*cryst struct, synth, ir, raman*)

IC-000701

[AuGa]
Gallium-gold system
Alloy with five main phases.
***Gallium compd. with gold* (*1:3*)** [83231-92-9]
Gallium trigold. Gallium gold (*$GaAu_3$*). *Gold gallium* (*Au_3Ga*)

$AuGeLi_2$ **IC-000703**
Gold lithium germanide ($AuLi_2Ge$)
Germanium gold dilithium. Germanium compd. with gold and lithium (1:1:2). Germanium gold lithium (*$GeAuLi_2$*). *Lithium gold germanide* (*Li_2AuGe*)
[12322-52-0]

Li_2AuGe

M 283.4

Alloy. Struct. related to NaTl-type. Possesses fcc lattice. Yellowish orange cryst., stable to dry air.
Pauly, H. *et al*, *Z. Metallk.*, 1968, **59**, 47 (*synth, cryst struct*)
Guetlich, P. *et al*, *J. Phys. Chem. Solids*, 1976, **37**, 1011 (*mössbauer*)

IC-000704

[AuGeNa]
Germanium-gold-sodium system
Alloy with two main phases.
Germanium compd. with gold and sodium* (*1:3:1*), *10Cl
[76327-19-0]
Germanium gold sodium (*$GeAu_3Na$*). *Germanium trigold sodium. Gold sodium germanide* (*Au_3NaGe*)
Au_3GeNa M 686.4
Cubic containing 16-coordinate Na, 12 coordinate Au and 9 coordinate Ge.
Germanium compd. with gold and sodium* (*1:1:2*), *10Cl
[57673-56-0]
Germanium gold sodium (*$GeAuNa_2$*). *Gold sodium germanide* (*$AuNa_2Ge$*). *Gold disodium germanide*
$AuGeNa_2$ M 315.5
Orthorhombic.
Wrobel, G. *et al*, *Z. Anorg. Allg. Chem.*, 1977, **432**, 95 (*cryst struct*)
Doring, W. *et al*, *Z. Naturforsch., B*, 1980, **35**, 1482 (*cryst struct*)

IC-000705

$AuH_4O_4^\ominus$
Tetrahydroxyaurate(*III*)(1−)
Aurate (*$Au(OH)_4^\ominus$*)
[73615-37-9]

$[Au(OH_4)]^\ominus$ (sq. pl.)

M 264.9 (ion)
Has photographic uses.
K salt: [88334-21-8].
AuH_4KO_4 M 304.0
Amorphous solid.
Ba salt (2:1): [93611-85-9].
$Au_2BaH_8O_8$ M 667.3
Amorphous solid.
Sr salt (2:1): [93611-84-8].
$Au_2H_8O_8Sr$ M 617.6
Pale yellow rectangular prisms.
Jander, G. *et al*, *Z. Anorg. Allg. Chem.*, 1960, **304**, 165 (*synth*)
Eur. Pat., 93 002, (1983); *CA*, **100**, 94460h.
Jones, P.G. *et al*, *Acta Crystallogr., Sect. C*, 1984, **40**, 1776 (*cryst struct*)

$AuH_{12}N_4^{3\oplus}$ **IC-000706**
Tetraamminegold(3+), 9Cl
[43739-93-1]

$[Au(NH_3)_4]^{3\oplus}$

M 265.0 (ion)
Monomethyldocosylphosphonate salt: [53934-39-7].
Antiwear additive for lubricating oils.
Trinitrate: [60117-73-9].
Colourless cryst. Sol. NH_4NO_3 soln. Dec. to metallic gold at *ca.* 230°.
Skibsted, L.H. *et al*, *Acta Chem. Scand., Ser. A*, 1974, **28**, 740, 764 (*synth, electrochem*)
Weishaupt, H. *et al*, *Z. Naturforsch., B*, 1976, **31**, 554 (*cryst struct*)
Alix, A.J.P. *et al*, *C.R. Conf. Int. Spectrosc. Raman: 7th*, *1980*, 1980, 211; *CA*, 1981, **94**, 111815e (*ir, raman*)
Manfait, M. *et al*, *Inorg. Chim. Acta*, 1981, **50**, 147 (*ir, raman*)

[AuHg]
Gold-mercury system **IC-000707**
Gold amalgam
Alloy with two main phases.
***Gold compd. with mercury* (*3:1*)**
Trigold mercury
Au_3Hg M 791.4
***Gold compd. with mercury* (*2:1*)** [12271-87-3]
Digold mercury
Au_2Hg M 594.5
White or grey metallic grains.
Atanasov, V. *et al*, *Dokl. Bolg. Akad. Nauk*, 1983, **36**, 465; *CA*, **99**, 108277d (*synth*)
Nechaev, S.V. *et al*, *Dokl. Akad. Nauk SSSR, Ser. Khim.*, 1986, **289**, 1483 (*x-ray diffraction*)

AuI **IC-000708**
Gold(*I*) iodide (AuI), 10Cl
[10294-31-2]

AuI

M 323.8
Struct. comprises zig-zag chain of linear gold(*I*) moieties. A mixed conductor-electrical conductor up to 0° and an ion conductor above this temp. Commercially available. Mp 100° dec.
Weiss, A. *et al*, *Z. Naturforsch., B*, 1956, **11**, 604 (*synth, cryst struct*)
Jagodzinski, H. *et al*, *Z. Kristallogr.*, 1959, **112**, 80 (*cryst struct*)
Brauer, G., *Handbuch Präp. Anorg. Chem.*, 3rd Ed., Ferdinand Enke Verlag, 1975-1981, **2**, 1014 (*synth*)
Janssen, E.M.W. *et al*, *J. Less-Common Met.*, 1978, **59**, P65 (*phase diagram*)
Teicher, M. *et al*, *Phys. Rev. B: Condens. Matter*, 1978, **18**, 7134 (*elect cond*)

AuI_3 **IC-000709**
Gold(*III*) iodide (AuI_3), 9Cl
Auric iodide
[31032-13-0]

AuI_3

M 577.6
Not known to exist. 19th century references to dark-green, insol. AuI_3 are incorrect; the products obtained probably consisted of mixts. of AuI or complex iodides and salts of $I_3^\ominus$.
Ryan, J.L., *Inorg. Chem.*, 1969, **8**, 2058 (*existence*)

[AuIn] **IC-000710**
Gold-indium system
Indium gold
Several phases known, the most important detailed below.
***Gold compd. with indium* (*4:1*)** [63705-68-0]
Tetragold indium
Au_4In M 902.6
Hexagonal.
***Gold compd. with indium* (*3:1*)** [12598-23-1]
Au_3In M 705.7
Gold compd. with indium* (*9:4*), *10Cl [56320-57-1]
Nonagold tetraindium
Au_9In_4 M 2231.9
Cubic isostructural with Al_4Cu_9, γ-brass structure consists of 26 atom clusters.
***Gold compd. with indium* (*2:1*)** [55891-90-2]
Digold indium

Au_4In M 508.7
Orthorhombic

***Gold compd. with indium** (3:2)* [12598-24-2]
Trigold diindium
Au_3In_2 M 820.5

***Gold compd. with indium** (1:1)* [12006-55-2]
Gold indium
AuIn M 311.7
Tricline. Used in electrical contacts in microcircuits.

***Gold compd. with indium** (1:2)* [12044-81-4]
Gold diindium
$AuIn_2$ M 426.6
Cubic. Important in Josephson junction fabrication.

Hiscocks, S.E.R. *et al*, *Proc. R. Soc. London, Ser A*, 1964, **282**, 318 (*phase diagram*)
Metals Handbook, 8th Ed., 1973, **8**, 266 (*phase diagram*)

Vandenberg, J.M. *et al*, *J. Appl. Phys.*, 1982, **53**, 7385 (*films, Au_2In_3*)
U.S. Pat., 258 157, (1982); *CA*, **96**, 172879s (*use, AuIn*)
Sinha, V. *et al*, *J. Less-Common Met.*, 1983, **95**, 259 (*formn, AuIn, $AuIn_2$*)
Goral, J.P. *et al*, *Ultramicroscopy*, 1985, **18**, 275 (*electron microsc, Au_2In*)
Marinković, Z. *et al*, *J. Less-Common Met.*, 1986, **115**, 225 (*compound formn*)
Goral, J.P. *et al*, *J. Less-Common Met.*, 1986, **116**, 63 (*phase diagram, electron microsc*)

AuInLa IC-000711
Gold compd. with indium and lanthanum (1:1:1), 10Cl
Gold indium lanthanum (AuInLa)
[60616-34-4]

AuLaIn

M 458.6
Alloy with Fe_2P struct.
Rossi, D. *et al*, *Z. Metallk.*, 1977, **68**, 493 (*cryst struct*)

AuK IC-000712
Gold potassium
Gold compd. with potassium (1:1), 10Cl
[51434-62-9]

AuK

M 236.0
Alloy. Solid with metallic lustre.
Kienast, G. *et al*, *Z. Anorg. Allg. Chem.*, 1961, **310**, 143 (*phase diagram*)
Burns, R.C. *et al*, *J. Am. Chem. Soc.*, 1981, **103**, 2627 (*synth, reactions*)
Batchelor, R.J. *et al*, *Hyperfine Interact.*, 1986, **28**, 955 (*mössbauer*)
Batchelor, R.J. *et al*, *Inorg. Chem.*, 1986, **25**, 2009 (*synth, mössbauer, reactions*)

AuK_2Sb IC-000713
Gold potassium antimonide (AuK_2Sb)
Antimony compd. with gold and potassium, 10Cl. Antimony gold potassium (SbAuK$_2$)
[75228-62-5]

AuK_2Sb

M 396.9
Isostructural with $AsCuNa_2$ struct. type. Cryst.
Muss, C. *et al*, *Z. Naturforsch., B*, 1980, **35**, 1055 (*cryst struct*)

AuLi IC-000714
Gold lithium
Gold compd. with lithium (1:1), 10Cl
[12370-48-8]

AuLi

M 203.9
Alloy. Solid with metallic lustre.
Kienast, G. *et al*, *Z. Anorg. Allg. Chem.*, 1961, **310**, 143 (*phase diagram*)
Ihle, H.R. *et al*, *J. Chem. Phys.*, 1977, **66**, 5105 (*matrix study*)
Stone, H.E.N. *et al*, *Acta Metall.*, 1978, **26**, 1399 (*rev*)
Batchelor, R.J. *et al*, *Inorg. Chem.*, 1986, **25**, 2009 (*synth, mössbauer*)

AuLiMgSn IC-000715
Gold lithium magnesium tin (AuLiMgSn)
Gold compd. with lithium, magnesium and tin, 10Cl
[76327-17-8]

AuLiMgSn

M 346.9
Alloy. $CuHg_2Ti$ struct. type. Cryst.
Eberz, U. *et al*, *Z. Naturforsch., B*, 1980, **35**, 1341 (*cryst struct*)

$AuLi_2Sn$ IC-000716
Gold lithium tin ($AuLi_2Sn$)
Gold compd. with lithium and tin (1:2:1), 10Cl
[12044-82-5]

$AuLi_2Sn$

M 329.5
Alloy. $CuHg_2Ti$ struct. type. Cryst.
Guetlich, P. *et al*, *J. Phys. Chem.*, 1976, **37**, 1011 (*mössbauer*)
Eberz, U. *et al*, *Z. Naturforsch., B*, 1980, **35**, 1341 (*cryst struct*)

[AuMg] IC-000717
Gold-magnesium system
Series of alloys.

Gold compd. with magnesium (4:1) [12256-75-6]
Tetragold magnesium
Au_4Mg M 812.1
Cu_3Pd struct. type, monoclinic. Also complicated $Au_{77}Mg_{23}$ struct.

Gold compd. with magnesium (3:1) [12044-97-2]
Digold magnesium
Au_2Mg M 418.2

Gold compd. with magnesium (1:1) [12256-45-0]
AuMg M 221.2
CsCl structure type.

Gold compd. with magnesium (1:2) [12399-98-3]
$AuMg_2$ M 245.5
Superstructure of Co_2Si struct. kind.

Gold compd. with magnesium (1:3) [12399-99-4]
Gold trimagnesium
$AuMg_3$ M 269.8
Superstruct. of Na_3As kind.

Brauer, G. *et al*, *Z. Phys. Chem.*, 1936, **33**, 304 (*cryst struct, AuMg*)
Terasaki, O. *et al*, *J. Appl. Crystallogr.*, 1982, **15**, 65 (*cryst struct, Au_3Mg*)

Abouchacra, G. *et al*, *Radiat. Eff.*, 1982, **64**, 189 (*synth, cryst struct, Au_3Mg*)

Bonsov, Yu.A. *et al*, *Zh. Struki. Khim.*, 1983, **24**, 97 (*theory*)
Daams, J.L.C. *et al*, *Philips J. Res.*, 1984, **39**, 275 (*cryst struct, $AuMg_2$, $AuMg_3$*)
Chulkov, E.V. *et al*, *Piz. Met. Metalloved.*, 1985, **59**, 730; *CA*, **102**, 224448q (*theory*)

AuMgSb IC-000718
Gold magnesium antimonide (AuMgSb)
Antimony compd. with gold and magnesium(1:1). Antimony gold magnesium (SbAuMg)
[101360-62-7]

AuMgSb

M 343.0
Characterised as ternary 'Zintl phase' with a filled zinc blende struct.
Eberz, U. *et al*, *Z. Naturforsch., B*, 1980, **35**, 1341 (*synth, cryst struct*)
Pulm, H. *et al*, *J. Less-Common Met.*, 1986, **115**, 127 (*pe, aes*)

AuMgSn IC-000719
Gold magnesium tin (AuMgSn)
Gold compd. with magnesium and tin (1:1), 11Cl
[76327-16-7]

AuMgSn

M 339.9
Alloy. Cubic AlGeLi struct. type.
Eberz, U. *et al*, *Z. Naturforsch., B*, 1980, **35**, 1341 (*cryst struct*)

$AuN_4O_{12}^{\ominus}$ IC-000720
Tetrakis(nitrato-*O*)aurate(*III*)(1 −), 9Cl
Tetranitratoaurate(III)(*1 −*)

$Au(ONO_2)_4^{\ominus}$

M 444.9 (ion)
Unusual unidentate nitrate groups; square planar. Synth. by reaction between N_2O_5 and $AuX_4^{\ominus}$ at −78°.
Nitronium salt: Fairly unstable, v. moisture-sensitive large yellow cryst. (conc. HNO_3). V. sol. $MeNO_2$, fuming HNO_3. Sl. dec. under dry N_2; rapid dec. in moist air, evolving white fumes. Dec. sl. in $MeNO_2$ soln., forming a gold mirror.
▷ Reacts explosively with DMSO and Me_2CO.
Na salt: [38139-24-1].
Synth. from nitronium salt. V. unstable cryst. (conc. HNO_3).
K salt: [23451-05-0].
Hygroscopic pale yellow cryst. (HNO_3). Diamagnetic.
Rb salt: [38139-26-3].
Cryst. (conc. HNO_3).
Cs salt: [38139-27-4].
Fairly stable cryst. (conc. HNO_3).
Garner, C.D. *et al*, *J. Chem. Soc. A*, 1970, 3092 (*synth, cryst struct*)
Addison, C.C. *et al*, *J. Chem. Soc., Dalton Trans.*, 1972, 1440 (*synth, ir, raman*)

$AuN_{12}^{\ominus}$ IC-000721
Tetra(azido)aurate(1 −), 11Cl

$[Au(N_3)_4]^{\ominus}$

M 365.0 (ion)
▷ Potentially explosive.
Ph_4As salt: [14781-43-2].
Colourless cryst. (CH_2Cl_2/pet. ether). Mp 127°.
Beck, W. *et al*, *Chem. Ber.*, 1967, **100**, 2335; 1984, **117**, 419 (*synth, cryst struct*)

AuNa IC-000722
Gold sodium (AuNa)
Gold compd. with sodium (1:1), 10Cl
[61115-29-5]

AuNa

M 219.9
Alloy. Solid with metallic lustre.
Kienast, G. *et al*, *Z. Anorg. Allg. Chem.*, 1961, **310**, 143 (*phase diagram*)
Piacenti, V. *et al*, *High Temp. Sci.*, 1977, **9**, 189 (*gas phase thermodyn*)
Batchelor, R.J. *et al*, *Inorg. Chem.*, 1986, **25**, 2009 (*synth, mössbauer*)

[AuNaSi] IC-000723
Gold-sodium-silicide system

***Gold sodium silicide** (Au$_3$NaSi)* [76328-83-1]
Trigold sodium silicide
Au_3NaSi M 641.9
Cubic, with containing 16-coordinate Na, 12 coordinate Au and 9 coordinate Si.

***Gold sodium silicide** ($Au_2Na_{1.5}Si$)*
$Au_2Na_{1.5}Si$ M 456.5
Cell contents $Au_{81}Na_{52}Si_{20}$. Cubic $Mg_{32}(ZnAl)_{49}$ struct. type.
Döring, W. *et al*, *Z. Naturforsch., B*, 1979, **34**, 1715; 1980, **35**, 1482 (*cryst struct*)

[AuNaSn] IC-000724
Gold-sodium-tin system
Alloy series.

***Gold compd. with sodium and tin** (3:2:1), 11Cl*
Au_3Na_2Sn M 755.5
Cubic $Mg_{32}(ZnAl)_{49}$ struct. type. Cell contents $Au_{78}Na_{60}Sn_4$.

***Gold sodium tin** (AuNaSn)* [57673-57-1]
Gold compd. with sodium and tin (1:1:1), 10Cl
AuNaSn M 338.6
Orthorhombic (E-phase, NiSiTi struct. type).
Wrobel, G. *et al*, *Z. Anorg. Allg. Chem.*, 1977, **432**, 95 (*cryst struct, AuNaSn*)
Döring, W. *et al*, *Z. Naturforsch., B*, 1979, **34**, 1715 (*cryst struct, Au_3Na_2Sn*)

$AuO_2^{\ominus}$ IC-000725
Dioxoaurate(1 −)

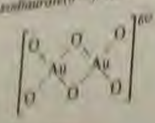
$[AuO_2]^{\ominus}$

M 228.9 (ion)
K salt: [12446-76-3]. *Gold potassium oxide, 8Cl*
$AuKO_2$ M 268.0
Catalyst for oxidation of aldehydes to carboxylic acids.
Sl. moisture-sensitive yellow cryst. Dec. slowly in air. Dec. *ca.* 450°, forming metallic gold.
Rb salt: [12512-20-8]. *Gold rubidium oxide, 8Cl*
AuO_2Rb M 314.4
Moisture-sensitive yellow solid. Dec. *ca.* 500°.
Hoppe, R. *et al*, *Z. Anorg. Allg. Chem.*, 1962, **314**, 4 (*synth, props*)

South African Pat. 0 802 009, (1968); *CA*, 1969, **70**, 87631v (*synth*)
Wassel-Nielsen, H.-D. *et al*, *Z. Anorg. Allg. Chem.*, 1970, **375**, 43 (*synth, cryst struct*)

IC-000726

AuO_5^{3G}
Trioxoaurate(*III*)(3−)
Dioxo-μ-oxido-trioxodiaurate(6−). Aurate ($Au_2O_5^{3G}$)



dimer

M 344.9 (ion)
Dimeric, planar struct.
Dimer, hexa-Na salt [80424-36-8] *Gold sodium oxide* ($Au_2Na_6O_5$)
$Au_2Na_6O_5$ M 627.8
Deliquescent golden yellow transparent cryst.

[12312-19-9]
Hoppe, R. *et al*, *Z. Anorg. Allg. Chem.*, 1963, **324**, 4 (*synth*)
Klassen, H. *et al*, *Z. Naturforsch., B*, 1981, **36**, 1395 (*synth, props, cond struct*)

$AuO_2S_2^{3G}$ **IC-000727**
Bis(thiosulfato)aurate(*I*)(3−)
Bis(monothiosulfato(2−)-O,S)aurate(1−)

$[Au(SSO_3)_2]^{3G}$

M 421.2 (ion)
Tri-Na salt, monohydrate [15283-43-1]. *Sodium aurothiosulfate. Aurothiosulfate. Aurosan. Aurothion. Auracidine. Aurolin. Auropax. Ausopin. Sanochrysine. Crysalbine. Crysion. Nasserstein. Sulfhercisol. Thiochrysine*
$AuH_2Na_2O_5S_4$ M 508.2
Antirheumatoid drug. Lowers blood pressure by inhibiting prostaglandin synthesis. Chemical sensitiser of photographic AgBr films. Light-sensitive glistening white cryst. Aq. solns dec. on standing. Sol. H_2O, insol. EtOH, org. solvs. Centrosymmetric dimer with Au···Au 330 pm. Coord. about gold is linear with thiosulfate S-bonded. Dehydrates at 120°

[15843-98-3]

[AuPb]
Gold-lead system **IC-000728**
Alloy series

Gold compd. with lead *(2:1)*, *10CI* [12006-66-5]
Au_2Pb M 601.1
Congruent in peritectic reaction at 434°. Stable at >209°. Fm Cu_2Mg type struct.

Gold compd. with lead *(1:1)* [12256-51-8]
AuPb M 404.1
Generated in peritectic reaction at 221.5°.

Gold compd. with lead *(1:2), HCI* [12006-57-4]
$AuPb_2$ M 611.3
Generated in peritectic reaction at 253°. Tetragonal Al_2Cu type.

Wollbaum, H., *Z. Metallk.*, 1943, **35**, 218 (*cryst struct*)

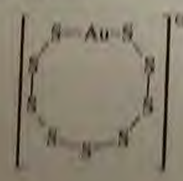
AuS_9^{4G} **IC-000730**
Nonathiosaurate(1−), 11CI



M 485.3 (ion)
Puckered ring with linear S—Au—S.
Ph_4As salt [88867-22-5].
Synth. from $Au(SCN)_2^{4G}$ and Ph_4AsS_2 in EtOH. Air- and light-stable bright yellow platelets (EtOH). Sol. DMSO; insol. H_2O, other org. solvs. Dec. in acid.

Maebach, G. *et al*, *Angew. Chem., Int. Ed. Engl.*, 1984, **23**, 246 (*synth, ir, cryst struct*)

$AuSb^{1G}$ **IC-000731**
Stibidosaurate(2−)

$[AuSb]^{1G}$

M 318.7 (ion)
Struct. comprises infinite zig-zag chains resembling gold(*I*) halides. The gold atoms have linear co-ordination geometries.
Di-Na salt [75228-61-4]. *Antimony gold sodium (1/1/2), 5Sb,Au,Na3-Antimony compd. with gold and sodium (1:1:2), 10CI*
$AuNa_2Sb$ M 364.6
Orthorhombic cryst.

Mun, C. *et al*, *Z. Naturforsch., B*, 1980, **35**, 1055 (*synth, cryst struct*)

$AuSb_2$ **IC-000732**
Aurostibite, 11CI
Gold diantimonide. Antimony gold (Sb_2Au)
[12044-89-2]

$AuSb_2$

M 440.4
Alloy with cubic FeS_2 struct. Mineral from NW Territories, Canada, Yugoslavia and elsewhere. Metal. Cryst. resembling galena.

[12044-88-1]
Smithells Metals Handbook, 8th Ed., 1973, **8**, 243, 268 (*cryst struct, phase diagram*)

$AuSb_6Te$ **IC-000733**
Antimony gold telluride (Sb_6AuTe), 11CI
Hexaantimony gold tellurium
[92522-32-2]

$AuSb_6Te$

M 1055.0
High temp. bulk phase which crystallizes in a cubic α—Po struct. Semiconductor.

Shanov, V. *et al*, *Mater. Res. Soc. Symp. Proc.*, 1984, **22**, 351 (*synth*)

AuSe **IC-000734**
Gold selenide, 10CI
[23331-11-3]

$Au^{I}Au^{III}Se_2$

M 275.9
Mixed valence compd. Linear Au(*I*) and square planar Au(*III*) fragments form infinite rods. Coordination formula is $[Au^{II}Se_{2/1}Au^{III}Se_{4/1}]$. Black thin needles or plates.

Cranton, G.E. *et al*, *Can. J. Chem.*, 1968, **46**, 2637 (*synth, phase diagram*)

[AuSn] **IC-000735**
Gold-tin system
A series of alloys

Gold compd. with tin *(5:1), 10CI* [12006-74-5]
Pentagold tin
Au_5Sn M 1103.5
Rhombohedral R3 superstructure of the hcp structure.

Gold compd. with tin *(2:1)* [57142-94-6]
Digold tin
Au_2Sn M 512.6
Atomization energy 540.5 kJ mol^{-1}. ΔH_f° 493.0 kJ mol^{-1}

Gold compd. with tin *(1:1), HCI* [12006-66-9]
AuSn M 315.6
Hexagonal NiAs struct. ζ—AuSn hcp magnesium struct.

Gold compd. with tin *(2:3)* [57142-95-7]
Au_2Sn_3 M 631.3
Atomization energy 726 kJ mol^{-1}. ΔH_f° 610 kJ mol^{-1}.

Gold compd. with tin *(1:2)* [12256-54-1]
Gold ditin
$AuSn_2$ M 434.3
Orthorhombic.

Gold compd. with tin *(1:3)* [57142-93-5]
Gold tritin
$AuSn_3$ M 553.0
Atomization energy 788 kJ mol^{-1}. ΔH_f° 477 kJ mol^{-1}.

Gold compd. with tin *(1:4)* [12044-91-6]
Gold tetratin
$AuSn_4$ M 671.8
Face centred orthorhombic struct.

Davies, H.A. *et al*, *J. Inst. Met.*, 1968, **96**, 220 (ζ-*phase, AuSn*)

$AuTe_2$ **IC-000737**
Gold tellurides ($AuTe_2$), 9CI
Gold ditelluride
[12006-61-0]

$AuTe_2$

M 452.1
Struct. comprises $AuTe_2$ molecules with additional weaker Au···Te interactions.

Mineral-form
Calaverite
Occurs widely in low to high temp. vein deposits, commonly associated with other minerals. Brass yellow to silver white monoclinic cryst.

Mineral-form
Krennerite
Occurs mainly in low temp. veins at sites in U.S.A., Canada, Transylvania, Australia and Fiji. Silver white to pale yellowish white, orthorhombic cryst. Metallic

[1303-56-6, 56499-48-0]

IC-000738

[AuZn]

Gold-zinc system

Three alloys.

Gold compd. with zinc *(3:1)* [12256-74-5]
Trigold zinc
Exists in three cryst. modifications.

Gold compd. with zinc *(1:1), 11CI* [12006-63-2]
AuZn M 262.3
Ordered bcc struct. based on CsCl. Cryst.

Gold compd. with zinc *(1:3), 11CI* [11089-97-7]
Gold trizinc
$AuZn_3$ M 393.1
High temp. form ordered bcc CsCl (γ_1). Low temp. form ordered cubic

Smithells Metals Handbook, 5th Ed., 1973, **8**, 244, 269 (*cryst struct, phase diagram*)
Trulio, J. *et al*, *J. Phys. F*, 1982, **12**, 2165 (*domain struct., Au_3Zn*)

Au_2Bi IC-000739

Bismuth gold ($BiAu_2$)
Maldonite, 11CI *Digold bismuth*

[12426-53-8]

Au_2Bi

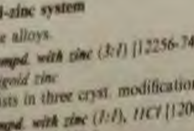
M 682.9
β-phase has face centred cubic Cu_2Mg struct. Mineral. Light cinammon cream-coloured in reflected light.

Mineral. Handbook, 5th Ed., 1971, **3**, 244, 266 (*cryst. struct, phase diagram*)
Nakazawa, I.Ya. *et al*, *Mineral. Zh.*, 1985, **7**, 82; *CA*, **103**, 128617 (*mineral forms*)

$Au_2F_{10}O_2Te_2$ IC-000740

Hexakis(pentafluorohydroxytellurato)digold(*III*)
Bis[μ-(pentafluorohydroxytellurato-O:O)]tetrakis(pentafluorohydroxytellurato-O)digold(III), 11CI
Gold(III) pentafluorohydroxytellurate dimer

[67972-82-4]



M 1025.4
Struct. analogous to Au_2Cl_6 but dihedral angle of 34° between two square planes. Synth. from AuF_3 and $B(OTeF_5)_3$. Stable brown-orange cryst. (by subl.), sensitive to hydrol. Mp 128°. Subl.$_{0.75}$ 110°

Huppmann, P. *et al*, *Z. anorg. Allg. Chem.*, 1985, **524**, 26 (*cryst. struct, raman, F-19 nmr, ms*)

Au_2Ge_2Sr IC-000741

Germanium compd. with gold and strontium (2:2:1), 9CI
Germanium gold strontium (Ge_2Au_2Sr). Digermanium digold strontium

[37248-67-2]

$SrAu_2Ge_2$

M 626.7
Alloy. Tetragonal $ThCr_2Si_2$ struct. type.

May, N. *et al*, *Z. Naturforsch., B*, 1972, **27**, 864 (*cryst struct*)

Au_2Ge_2Th IC-000742

Gold thorium germanide (2:1:2)
Digold thorium digermanide. Germanium gold thorium (Ge_2Au_2Th)

$ThAu_2Ge_2$

M 771.1
Alloy. $ThCu_2Si_2$ struct.

Marazza, R. *et al*, *J. Less-Common Met.*, 1978, **53**, 193 (*cryst struct*)

$Au_2I_{10}Tl_6$ IC-000743

Gold thallium iodide ($Au_2Tl_6I_{10}$), 10CI
Digold hexathallium decaiodide

[67338-07-2]

$Au_2Tl_6I_{10}$

M 2889.2
Struct. comprises framework of Tl_6I_8 with channels parallel to *c*-axis. These channels contain $Au^{\oplus}$ with planar trigonal coordination, and $I_3^{\ominus}$ or $I^{\ominus}$ ions. Synth. in closed system. Used as battery electrodes. Black cryst. with golden lustre. Mp 276° dec. (sealed tube). Dec. at 65° *in vacuo* losing I_2.

Ger. Pat., 2 801 912, (1979); *CA*, **91**, 178133n (*use*)
Strieger, W. *et al*, *Z. Naturforsch., B*, 1979, **34**, 685 (*synth, cryst struct*)
Stoltz, H.J. *et al*, *Z. Naturforsch., A*, 1980, **35**, 389 (*raman, ir*)

Au_2O_3 IC-000744

Gold(*III*) oxide (Au_2O_3), 10CI
Digold trioxide

[1303-58-8]

Au_2O_3

M 441.9
Polymeric struct. based on square planar gold atoms. The oxygen atoms are either coordinated to two or three gold atoms. Synth. from Au_2O_3 aq. in $HClO_4$ after heating in a quartz tube. Commercially available. Ruby orthorhombic cryst. Studied on gold surfaces involved in electrochemical oxidation process.

Brauer, G., *Handbuch Präp. Anorg. Chem.*, 3rd Ed., Ferdinand Enke Verlag, 1975-1981, **2**, 1015 (*synth*)
Lolurupel, M.M. *et al*, *Electrochim. Acta*, 1976, **21**, 957 (*electrochem*)
Schwarzmann, E. *et al*, *Z. Naturforsch., B*, 1976, **31**, 135 (*synth, struct*)
Jones, P.G. *et al*, *Acta Crystallogr., Sect. B*, 1979, **35**, 1435 (*cryst struct*)

$Au_2O_7Se_2$ IC-000745

Gold oxide selenite ($Au_2O(SeO_3)_2$)
μ-Oxobis[selenito(2−)-O]digold

[85025-30-5]

$Au_2(SeO_3)_2O$

M 663.8
Layer structure involving selenite and oxide anions. Synth. by reaction of gold and selenic acid in a sealed tube at 280°. Air-stable red transparent platelets.

Jones, P.G. *et al*, *Z. Naturforsch., B*, 1983, **38**, 10 (*synth, cryst struct*)

$Au_2O_{11}Se_4$ IC-000746

Gold diselenite selenite, 11CI
Digold(III) bis(selenite) diselenite

[81627-23-8]

$Au_2(SeO_3)_2(Se_2O_5)$

M 885.7
Originally formulated as $[Au_2(SeO_4)_3]$. Struct. contains three cross-linked chains of the form [...Au-(selenite or diselenite)-Au...]. Synth. by reaction of gold metal and selenic acid at 280°. Used to colour glasses. Yellow cryst.

Jones, P.G. *et al*, *Z. Naturforsch., B*, 1981, **36**, 1050 (*synth, cryst struct*)

Au_2P_3 IC-000747

Gold phosphide (Au_2P_3), 10CI
Digold triphosphide

[12044-95-0]

M 486.8
Struct. comprises $P_6^{4\ominus}$ rings linked directly and through Au(*I*) atoms. Obt. via chemical transport techniques. Metallic conductor. Cryst. Diamagnetic.

Haraldsen, H. *et al*, *Z. Elektrochem.*, 1931, **37**, 502 (*synth*)
Olofsson, O., *Acta Chem. Scand.*, 1970, **24**, 723 (*synth*)
Jeitschko, W. *et al*, *Acta Crystallogr., Sect. B*, 1979, **35**, 573 (*synth, cryst struct*)

Au_2S IC-000748

Gold(*I*) sulfide (Au_2S)
Aurous sulfide

[1303-60-2]

Au_2S

M 425.9
Prepd. from $K[Au(CN)_2]$ + H_2S. Commercially available. Black-brown powder when dry, steel-grey when moist. Prac. insol. H_2O. Mp 240° dec.

Hofmann, L. *et al*, *Ber.*, 1887, **20**, 2361 (*synth*)
Hirsch, H. *et al*, *Compt. Rend. Hebd. Seances Acad. Sci. Sect. B*, 1966, **263**, 1328 (*cryst struct*)
Brauer, G., *Handbuch Präp. Anorg. Chem.*, 3rd Ed., Ferdinand Enke Verlag, 1975-1981, **2**, 1016 (*synth*)
Merck Index, 11th Ed., 1989, No. 4417.

Au_2S_3 IC-000749

Gold(*III*) sulfide (Au_2S_3)
Auric sulfide

[1303-61-3]

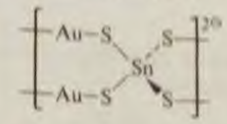
M 490.1 Au_2S_3

Prepd. from $LiAuCl_4$, $HAuCl_4$ or $AuCl_3$ with H_2S. Commercially available. Deep black solid. Insol. H_2O. Mp 197° dec.

Brauer, G., *Handbuch Präp. Anorg. Chem.*, 3rd Ed., Ferdinand Enke Verlag, 1975-1981, **2**, 1017.
Merck Index, 11th Ed., 1989, No. 4432.

$Au_2S_4Sn^{2\ominus}$ IC-000750

(Tetrathiostannato)diaurate(2−)
Tetrathioxostannatediaurate(2−), 10CI

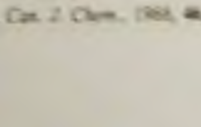


M 640.9 (ion)
Ba salt: [68879-44-7]. *Barium digold tetrathiostannate. Gold barium thiostannate. Barium gold tin sulfide ($BaAu_2SnS_4$)*
Au_2BaS_4Sn M 778.2
Obt. by heating binary sulfides at 400-540°. Red mosaic blocks. Orthorhombic. Chain struct. in solid state with Au—Au 298 pm.

Teske, C.L., *Z. Anorg. Allg. Chem.*, 1978, **445**, 193 (*cryst struct*)

$Au_2S_8^{2\ominus}$ IC-000751

Bis[μ-(tetrathio)]diaurate(2−), 11CI
Di-μ-tetrasulfidodiaurate(2−)



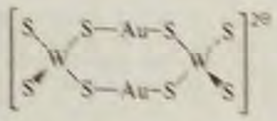
M 650.4 (ion)
Bis-Ph_4P salt: [90939-27-8].
Red-brown cryst.

Muller, A. *et al*, *Inorg. Chim. Acta*, 1984, **85**, L39 (*synth, cryst struct*)

$Au_2S_8W_2^{2\ominus}$ IC-000752

Bis(tetrathiotungstato)diaurate(2−)
Diauratetetra-μ-thioxotetrathioxoditungstate(2−), 9CI

[65015-83-0]



M 1018.1 (ion)
Interatomic distance Au—Au 311 pm.
Bis-Ph_4P salt: Dark red cryst. (DMF/EtOH).

Müller, A. *et al*, *Angew. Chem., Int. Ed. Engl.*, 1978, **90**, 52 (*synth, cryst struct, ir, mössbauer*)
Strähle, J. *et al*, *Z. Anorg. Allg. Chem.*, 1979, **456**, 241 (*synth*)

Au_2SeTe IC-000753

Gold selenide telluride (Au_2SeTe)
Digold selenide telluride

Au_2SeTe

M 600.4
Primitive orthorhombic cryst.

Cranton, G.E. *et al*, *Can. J. Chem.*, 1968, **46**, 2637 (*phase diagram, x-ray data*)

IC-000754

Au_2Si_2Th

Gold thorium silicide (Au_2Si_2Th)

Digold thorium disilicide

Au_2ThSi_2

M 482.1

$ThCu_2Si_2$ structure type. Solid.

Marazza, R. *et al*, *J. Less-Common Met.*, 1978, **53**, 193 (*cryst struct*)

IC-000755

Au_2Si_2U

Gold uranium silicide (Au_2USi_2)

Digold uranium disilicide

Au_2USi_2

M 688.1

$ThCu_2Si_2$ structure type. Solid.

Marazza, R. *et al*, *J. Less-Common Met.*, 1978, **53**, 193 (*cryst struct*)

IC-000756

$Au_3Sb_4Y_3$

Gold yttrium antimonide ($Au_3Y_3Sb_4$)

Antimony compd. with gold and yttrium (4:3:3)

Tetraantimony trigold triyttrium. Antimony gold yttrium ($Sb_4Au_3Y_3$)

[63144-21-8]

$Au_3Y_3Sb_4$

M 1344.6

Cubic. Y has four close Au neighbours and four close Sb neighbours. Alloy.

Daniel, A.E., *Acta Crystallogr., Sect. B*, 1977, **33**, 1579 (*cryst struct*)

IC-000757

Au_xSi

Gold silicide (Au_xSi)

Trigold silicide

[12588-93-1]

Au_xSi

M 618.9

Solid.

Metals Handbook, 8th Ed., 1973, **8**, 268 (*phase diagram*)

Bisi, O. *et al*, *J. Phys. C*, 1982, **15**, 4709 (*electronic struct*)

IC-000758

Au_2Cl_6

Tetra-μ-chlorotetrachlorotetraaurate, 10Cl

Octachlorotetraaurate

[62792-24-9]

$Au^I_2Au^{III}_2Cl_6$

M 1071.2

Mixed valence compd., square planar and linear fragments are linked to give polymeric struct. Synth. from Au_2Cl_4 and Cl-benzyltrichlorogold. IC-002272. Black cryst. chlorinated solvs. or $SOCl_2$.

Monomer: Dichlorogold Gold dichloride

$AuCl_2$ M 267.8

Dell'Amico, D.B. *et al*, *J. Chem. Soc., Dalton Trans.*, 1976, 1829 (*synth*)

Dell'Amico, D.B. *et al*, *J. Chem. Soc., Chem. Commun.*, 1977, 31 (*cryst struct*)

IC-000759

Au_4KSn_2

Gold potassium tin (Au_4KSn_2)

Gold compd. with potassium and tin (4:1:2), 10Cl

[68449-33-2]

Au_4KSn_2

M 1064.3

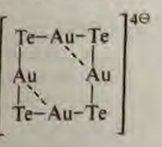
Alloy. Tetragonal struct. derived from Tl_2Se by removing two sites per cell.

Sinnen, H.-W. *et al*, *Z. Naturforsch., B*, 1978, **33**, 1077 (*cryst struct*)

IC-000760

$Au_4Te_4^{4\ominus}$

Tetra-μ-telluroxotetra-*cyclo*-aurate(4 –), 11Cl



M 1298.2 (ion)

Di-K, bis-Ph_4P salt, tetrakis-ethylenediamine complex: [96211-81-3].

Synth. from KAuTe alloy, ethylenediamine and Ph_4PBr. Dark red cryst. The potassium cations are coordinated on opposite faces of $(AuTe)_4$ square.

Di-K, bis-Ph_4P salt, bis-DMF, bis-MeOH complex: [96211-83-5].

Dark red cryst.

Haushalter, R.C., *Angew. Chem., Int. Ed. Engl.*, 1985, **97**, 432 (*synth, cryst struct*)

IC-000761

Au_7IP_{10}

Gold iodide phosphide (Au_7IP_{10}), 10Cl

Iododecaphosphidoheptagold

[67116-00-1]

Au_7IP_{10}

M 1815.4

Struct. comprises infinite sheets of P_{12} rings containing 3-coordinate Au(*I*) atoms. The sheets are joined by linear P—Au—P and Au—I—Au bridges. Synth. from Au_2P_3 and 7 wt.% iodine in metal vapour transport reaction. Cryst. obt. by chemical transport from 697-647°. Diamagnetic. Metallic conductor.

Beck, C.G. *et al*, *Monatsh. Chem.*, 1972, **103**, 482 (*synth*)

Binnewies, M., *Z. Naturforsch., B*, 1978, **33**, 570 (*cryst struct*)

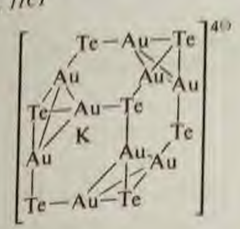
Jeitschko, W. *et al*, *Acta Crystallogr., Sect. B*, 1979, **35**, 573 (*synth, cryst struct*)

IC-000762

$Au_8KTe_7^{4\ominus}$

Heptatelluroxopotassatenonaaurate(4 –)

Tri-μ-telluroxotetra-μ$_3$-telluroxononaaurate(5 –) potassium(1+), 11Cl



M 2704.9 (ion)

K^+ shown, embedded in cluster. Struct. comprises cube of Te atoms with missing vertex. Gold atoms lie on remaining edges.

Tetrakis-Ph_4P salt: [96211-78-8].

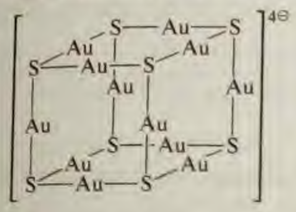
Synth. from K_3AuTe_2 alloy and Ph_4PBr in MeOH. Red triangular plates (MeOH).

Haushalter, R.C. *et al*, *Angew. Chem., Int. Ed. Engl.*, 1985, **97**, 412 (*synth, cryst struct*)

IC-000763

$Au_{12}S_8^{4\ominus}$

Octa-μ$_3$-thioxododecaaurate(4 –), 11Cl



M 2620.1 (ion)

Consists of cube of $S^{2\ominus}$ ligands with Au atoms along mid-points of edges.

Tetrakis-Ph_4As salt: [91742-15-3].

Light-sensitive, light yellow cryst. (H_2O). Sol. DMF, DMSO. Mp 230° dec.

Marbach, G. *et al*, *Angew. Chem., Int. Ed. Engl.*, 1984, **23**, 715 (*synth, cryst struct*)

IC-000764

B

Boron

[7440-42-8]

B

M 10.8

Atomic No. 5. Ground state electron config. $[He]2s^22p^1$. Discovered by L.J. Gay-Lussac, L.J. Thenard, and by Sir H. Davy in 1808. Obt. pure by Moissan in 1892. There are 6 known isotopes of which 2 are natural, and used (particularly ^{11}B) in nmr spectroscopy. Polymorphic, with cryst. and amorphous forms. Cryst. forms are extremely hard and refractory, with v. low electrical conductivity. Most abundant mineral is tourmaline, but most important source is borax, known to the ancient world. Element manuf. (1) by electrolysis of fused borates (2) by H_2 red. of volatile B compds. e.g. BBr_3. Also synth. by thermal dec. of B hydrides and halides. Metallurgical uses of pure element are rare. Alloys with other elements have widespread use (see individual borides). Essential for plant life. Cryst. B is v. unreactive; reacts with NaOH at 500°, Na_2CO_3 at 850°. Dissolves in H_2SO_4/HNO_3 (2:1). Amorphous B is v. reactive, sometimes violently. Mp 2190°. Bp 3660°. At high temp. reacts with all non-metals except H, Ge, Te and noble gases. Reacts with F_2 at r.t., H_2O at 100° → H_3BO_3. Non-toxic.

▷ ED7350000.

α-Rhombohedral-form

Consists of B_{12} icosahedra, with sl. deformed cep. 12 B atoms per unit cell. Synth. at 800-1100°. Obt. by pyrolysis of BI_3 on Ta, W or BN surface; also by pyrolysis of B hydrides. Cryst. from B-Pt melts. d 2.46.

α-Tetragonal-form

α′-form

1st cryst. polmorph obt. (1943). Now thought to be $B_{50}C_2$ or $B_{50}N_2$. There are 50 B atoms per unit cell with layers of B_{12} icosahedra connected by single B atoms. From $BBr_3 + H_2$ over Ta or W at 1200-1400°. d 2.35.

β-Rhombohedral-form

Thermodynamically most stable form. Struct. comprises central B_{12} icosahedron surrounded by an icosahedron of icosahedra. B-B 162-172, 176-177 and 188-192 pm. 105 atoms per unit cell. Synth. by cryst. of fused B. Mp 2250° (2180°), ~3650°. d 2.35.

β-Tetragonal-form

β′-form

192 B atoms per unit cell.

[BBa]

Barium borides

[97793-30-1]

In addition to the hexaboride, the diboride has been reported, but its existence is in some doubt.

***Barium boride* (BaB_6), 9Cl, 8Cl** [12046-08-1]

Barium hexaboride

B_6Ba M 202.1

Possesses the CaB_6 struct. Synth. from Ba and B under H_2 at 800-1300°; $BaCl_2$ with $Ba_2B_2O_5$; $BaO + B_4C + B$ at 1500°. Good cathode material. Forms dark green cube-shaped single cryst. Mp ca. 2270°. Semiconductor.

[BBe]

Beryllium borides

[66103-46-6]

Several phases reported; the existence of some is in doubt.

***Beryllium boride (Be$_3$B)*, 9CI, 8CI** [12536-51-5]

BBe_3 M 55.8

Mp 1160°. Fairly reactive to O, N, and C.

***Beryllium boride (Be$_2$B)*, 9CI, 8CI** [12536-51-5]

BBe_2 M 28.8

Fluorite struct. Synth. from B + Be at 1000°. Exists in pink and salmon-red forms.

***Beryllium boride (BeB$_2$)*, 9CI, 8CI** [12228-40-9]

B_2Be M 30.6

AlB_2-type struct. with hexagonal lattice. Synth. from elements at 800-1500° in inert atm. Potentially useful ceramic. Mp > 1970°. Stable to 800-900°.

***Beryllium boride (BeB$_6$)*, 9CI, 8CI** [12429-94-6]

Beryllium hexaboride

B_6Be M 73.8

Tetragonal lattice. B atoms occupy pairs of gaps in the packing of B_{12} icosahedra. Synth. from Be and B at 1000° (1400-1600°). Potential ceramic material and constituent of lightweight armour. Brick-red solid. Stable to 800-900°.

HBe_2HO_4 **IC-000767**

Beryllium borate hydroxide ($Be_2(BO_3)(OH)$)

[1318-62-3]

$Be_2(OH)(BO_3)$ or $3BeO.Be(OH)_3.B_2O_3$

M 93.8

Contains planar $BO_3^{3\ominus}$ and $OH^{\ominus}$ ions, not tetrahedral $(BO_3OH)^{4\ominus}$ ions. Colourless or pale grey orthorhombic luminescent cryst.

☢ Highly toxic.

Mineral-form

Hambergite

Occasionally contains fluorine: $Be_2BO_3(OH,F)$. Found in Norway, Madagascar, India, Pakistan and USA. Colourless, white prismatic cryst.

BBr_2H **IC-000777**

Dibromoborane, 10Cl, 9Cl, 8Cl

Dibromoborine

[13709-65-4]

BBr_2H

M 171.6

Prototype of the series of alkyldibromoboranes. Readily disproportionates into diborane, monobromoborane and BBr_3. More stable as its dimethyl sulfide complex. Unstable gas, sensitive to moisture. Reacts with hydroxylic solvs. and more slowly with ethers.

Me_2S complex: [55671-55-1]. *Dibromo(dimethyl sulfide) hydroboron. Dibromohydro[thiobis[methane]]boron, 10Cl*

$C_2H_7BBr_2S$ M 233.7

Hydroborating agent for alkenes and alkynes with high regiospecificity; provides a route to alkyldibromoboranes and alkyldihydroxyboranes. Air- and moisture-sensitive solid. Mp 30-33°.

Et_2O complex: [71648-08-3]. *Dibromo(diethyl ether) hydroboron. Dibromohydro[1,1'-oxybis[ethane]]boron, 10Cl. Dibromoborane etherate*

$C_4H_{11}BBr_2O$ M 245.7

Moisture-sensitive. Characterised only by ^{11}B nmr.

Dimer: Tetrabromodiborane(5)

$B_2Br_4H_2$ M 343.2

Existence not confirmed.

Calcium diboride
B_2Ca M 61.7

Calcium boride* (CaB_6), *9CI, 8CI [12007-99-7]
Calcium hexaboride
B_6Ca M 104.9
Cubic lattice with Ca at cell centre and compact, regular octahedra of B atoms linked at vertices by B—B bonds to give 3-D B network. Synth. from B_4C or B with Ca or CaO at 800-1600°; or from CaO + H_3BO_3 + Mg at 1100°. Also from $CaCO_3$ + B. Used in the manuf. of boron-alloyed steel. Black prisms or platelets. Insol. H_2O, MeOH. EtOH. Dissolves slowly in acids. Mp 2235°. Dec. to Ca + B in vapour. Semiconductor.

BCl_3H_3N IC-000806

Amminetrichloroboron
Trichloroborane ammonia; Boron trichloride-ammonia adduct
[49860-18-6]

$Cl_3B{\cdot}NH_3$

M 134.2
Minor product in reaction of H_3BNH_3 with BCl_3. Unstable with respect to elimination of HCl.

Hu, M.G. *et al, Inorg. Chem.*, 1979, **18**, 3297 (*synth*)
Hunt, R.L. *et al, Spectrosc. Int. J.*, 1982, **1**, 31 (*ir*)

BCl_3O_4 IC-000807

Dichloro(perchlorato)borane
Dichloro(perchloryloxy)borane, 10Cl
[15122-71-1]

Cl_2BOClO_3

M 181.1
Colourless liq. at −78°; glass at −180°.

Chausse, T. *et al, Nouv. J. Chim.*, 1981, **5**, 261 (*synth, ir, raman*)

BCl_3O_8 IC-000808

Chlorodiperchloratoborane
Chlorobis(perchloryloxy)borane, 10Cl
[15122-72-2]

$ClB(OClO_3)_2$

M 245.1
Colourless solid at −78°, dec. at r.t.

Chausse, T. *et al, Nouv. J. Chim.*, 1981, **5**, 261 (*synth, ir, raman*)

BCl_3O_{12} IC-000809

Triperchloratoborane
Boron triperchlorate; Boron perchlorate, 10Cl, 9Cl
[15122-73-3]

$B(OClO_3)_3$

M 309.1
Colourless cryst. solid at −78°, dec. slowly at r.t.
▷ Presumed explosive.

Mosher, R.A. *et al, CA*, 1966, **64**, 1598 (*synth*)
Chausse, T. *et al, Nouv. J. Chim.*, 1981, **5**, 261 (*synth, ir, raman*)

$BCl_4^{\ominus}$ IC-000810

Tetrachloroborate(1 −), 11Cl, 10Cl, 9Cl, 8Cl
[14911-67-2]

$[BCl_4]^{\ominus}$ (T_d)

M 152.6 (ion)
K salt: [31126-61-1]. *Potassium tetrachloroborate*
BCl_4K M 191.7
V. hygroscopic colourless solid. Sol. liq. SO_2.
Me_4N salt: [4272-49-5].
V. hygroscopic colourless solid. Sol. CH_2Cl_2. Insol. C_6H_6, CS_2, pentane, Et_2O. Mp 264° dec.
Pyridinium salt: V. hygroscopic colourless solid. Sol. MeCN. Insol. CCl_4, Et_2O, pentane, CS_2, C_6H_6. Mp 118-121° dec. (sealed tube).

$BCl_4O_{16}^{\ominus}$ IC-000811

Tetraperchloratoborate(1 −), 8Cl
Tetrakis(perchlorato-O)borate(1 −), 10Cl, 9Cl
[62565-96-2]

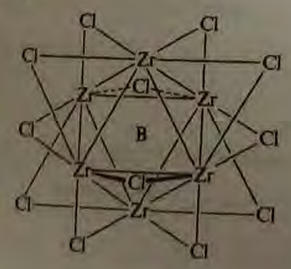
$[B(ClO_4)_4]^{\ominus}$

M 408.6 (ion)
NH_4 salt: [77951-42-9].
$BCl_4H_4NO_{16}$ M 426.6
Colourless solid.
▷ Stable at r.t. but stored cold in case of shock sensitive reaction.
Nitronium salt: [77951-43-0].
BCl_4NO_{18} M 454.6
Colourless solid.
▷ Stable at r.t. but stored cold in case of shock sensitive reaction.

Chausse, T. *et al, Nouv. J. Chim.*, 1981, **5**, 261 (*synth, ir, raman*)

$BCl_{13}Zr_6$ IC-000812

μ_6-Borylidynedodeca-μ-chlorochlorohexazirconium, 11Cl
Zirconium boride chloride (Zr_6BCl_{13})
[96929-13-4]



one Cl not shown

M 1019.0
One chlorine bridges to other $BCl_{12}Zr_6$ units. Synth. from Zr, $ZrCl_4$ and B in a sealed Ta tube at 700-860°. Black solid.

Ziebarth, R.P. *et al, J. Am. Chem. Soc.*, 1985, **107**, 4571 (*synth, cryst struct*)

$BCl_{12}Zr_6$ IC-000813

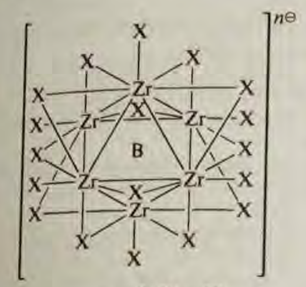
μ_6-Borylidynedodeca-μ-chlorodichlorohexazirconium, 11Cl
Zirconium boride chloride (Zr_6BCl_{14})
[96929-16-7]

M 1054.4
Two chlorines bridge to other $BCl_{12}Zr_6$ units; closely related to μ_6-Borylidynedodeca-μ-chlorochlorohexazirconium, IC-000812. Synth. from Zr, $ZrCl_4$ and B in a sealed Ta tube at 700-860°. Black solid.

Ziebarth, R.P. *et al, J. Am. Chem. Soc.*, 1985, **107**, 4571 (*synth, cryst struct*)

$BCl_{15}Zr_6^{1\ominus}$ IC-000814

μ_6-Borylidynedodeca-μ-chlorotrichlorohexazirconate(2 −), 11Cl



$n = 2, X = Cl$

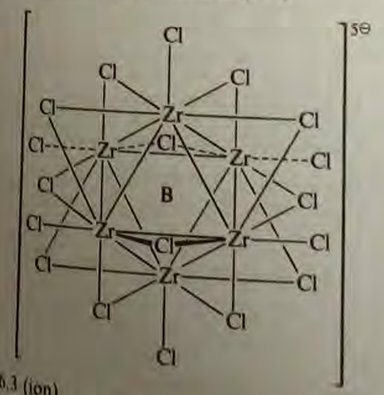
core cluster

M 1089.9 (ion)
Stoichiometry attained by extensive Cl-bridging between clusters.
Di-K salt: [96929-24-7].
Synth. by heating $ZrCl_4$, Zr, B and KCl in a sealed tube at 950°. Black cryst.

Ziebarth, R.P. *et al, J. Am. Chem. Soc.*, 1985, **107**, 4571; 1988, 110, 1132 (*synth, cryst struct*)

$BCl_{18}Zr_6^{5\ominus}$ IC-000815

μ_6-Borylidynedodeca-μ-chlorohexachlorohexazirconate(5 −), 12Cl
Hexazirconiumoctadecachloroboride(5 −)



M 1196.3 (ion)
Contains interstitial B atom in Zr_6 octahedron in isolated $[Zr_6BCl_{18}]^{5\ominus}$ anions.
Penta-Rb salt: [119878-69-2].
$BCl_{18}Rb_5Zr_6$ M 1623.6
Dark red cryst.

Ziebarth, R.P. *et al, J. Am. Chem. Soc.*, 1989, **111**, 3272 (*synth, cryst struct*)

[BCo]

Cobalt borides IC-000816

[12619-68-0]

A prep. of probably variable composition has been used in hydrogenations of olefins and acetylenes, as well as nitriles.

Cobalt boride* (Co_3B), *9Cl, 8Cl [12006-78-9]
Tricobalt monoboride
BCo_3 M 187.6
A metastable phase. Has Fe_3C (cementite) struct. Synth. from Co_2O_3 + B_4C + B. Mp 1280° (1125°) dec.

Cobalt boride* (Co_2B), *9Cl, 8Cl [12045-01-1]
Dicobalt monoboride
BCo_2 M 128.6
Synth. from Co_2O_3 + B_4C + B or CoS + BCl_3 under H_2 at <600°; Co_2O_3 + BN under NH_3 at 900°. Dec. at 845°.

Cobalt boride* (*CoB*), *9Cl, 8Cl [12006-77-8]
Cobalt monoboride
BCo M 69.7
FeB-type struct. Synth. from (i) Co_2O_3 + B_4C + C at 1000-1300°; (ii) B + C at 1100°; (iii) CoS + BCl_3 under H_2 at 600-800°; (iv) $NaBH_4$ + $CoCl_2$ at 350-400°. Mp 1460°. T_c 732K.

Cobalt boride* (CoB_2), *9Cl, 8Cl [11070-96-5]
Cobalt diboride
B_2Co M 80.5

[BCr] IC-000817

Chromium borides

In addition to phases described here, CrB_6 may exist.

Chromium boride* (Cr_4B), *9Cl, 8Cl [12006-81-4]
Tetrachromium boride
BCr_4 M 218.7
Mn_4B-type struct. Synth. from Cr_2S_3 + BCl_3 under H_2 at 800-1000°. Mp 1750° (1680°). Resistant to conc. HCl. Dissolved by H_2SO_4 + HNO_3.

Chromium boride* (Cr_2B), *9Cl, 8Cl [12006-80-3]
Dichromium monoboride
BCr_2 M 114.8
Mn_4B or $CuAl_2$-type structs. suggested. Existence in doubt. Mp 1875°.

Chromium boride* (Cr_3B_2), *9Cl, 8Cl [12007-38-4]
B_2Cr_3 M 292.4
Tetragonal lattice. Synth. from elements. Mp 2000°.

Chromium boride* (Cr_3B_2), *9Cl, 8Cl [12045-40-8]
Trichromium diboride
B_2Cr_3 M 177.6

Mp 2000° (1960°)

Chromium boride* (CrB), *9CI, 8CI [12006-79-0]

Chromium monoboride

BCr M 62.8

Orthorhombic with infinite zig-zag B atom chains which run through trigonal Cr atom lattice. Each B atom at centre of trigonal prism with Cr atom at each corner. Synth. from Cr_2O_3 + B at 1500° or from $CrCl_2$ + BCl_3 + H_2. Hard and metallic pillars. Mp ~2000°. Strongly paramagnetic. Stable at 1000-1300°.

Chromium boride* (Cr_3B_4), *9CI, 8CI [12045-71-5]

Trichromium tetraboride

B_4Cr_3 M 199.2

Ta_3B_4-type struct. Orthorhombic. Synth. from Cr_2O_3 + B at 1600° or from Cr + B. Thin plates or thick trapezoidal plates. Mp 1950°

Chromium boride* (Cr_2B_3), *9CI, 8CI [100629-17-2]

Dichromium triboride

B_3Cr_2 M 136.4

Orthorhombic lattice. Synth. from Cr + B in Al at > 1500°. Reacts with HF + HNO_3 + H_2SO_4 at 150°.

Chromium boride* (CrB_2), *9CI, 8CI [12007-16-8]

Chromium diboride

B_2Cr M 73.6

Hexagonal AlB_2-type struct. Also described as orthorhombic Mn_4B type. Synth. from Cr_2O_3 + B at 1600° or Cr_2O_3 + B_2O_3/Mg at 1200°, or BCl_3 + Cr_2S_3 under H_2 at 700-900°. Hard and metallic dendritic or hexagonal planar cryst. or hexagonal prisms. Mp 2130°. When finely divided, begins to oxidise in air at *ca.* 650°. Dissolves in H_2SO_4 aq. (1:2) and hot HNO_3. Stable to 5-20% NaOH aq., but added H_2O_2 accelerates dec. Attacked by fused NaOH.

[BDy] IC-000819

Dysprosium borides

DyB_2 has been reported in addition to the phases described here.

Dysprosium boride* (DyB_4), *9CI, 8CI [12310-43-9]

Dysprosium tetraboride

B_4Dy M 205.7

Tetragonal UB_4 struct.-type. Synth. from DyB_6 at high temp. Golden cryst. μ_{eff} = 10.4μ_B. Antiferromagnetic at low temp.

***Dysprosium boride* (DyB_6)** [12008-04-7]

Dysprosium hexaboride

B_6Dy M 227.3

Has the cubic CaB_6-type struct. Synth. from Dy_2O_3 + B at 1500-1600° or Dy_2O_3 + B_2O_3 + Mg at 1200°. Light blue solid becoming darker in colour when heated in air. Mp 1220°. Sol. HNO_3 at r.t., but stable to hot HCl (1:2). Reacts with H_2O at 300° under pressure. Reactive to H_2O_2.

▷ Thermally stable to 650-700° but pyrophoric as fine powder, and ignites at 730°.

Dysprosium boride* (DyB_{12}), *9CI, 8CI [12589-34-3]

Dysprosium dodecaboride

$B_{12}Dy$ M 292.2

Cubic UB_{12}-type struct. Synth. from Dy_2O_3 + B at 1450-1600°. Less reactive than lower borides. Resists HCl, H_2SO_4 and dec. only by oxidising acids (H_2SO_4 + HNO_3, cold HNO_3, aqua regia). At high temp. dissociates to DyB_6.

Dysprosium boride* (DyB_{66}), *9CI [11141-33-6]

$B_{66}Dy$ M 876.0

Struct. has B_{12} icosahedron surrounded by 12 B_{12} linked icosahedra. Unit cell has 1584 B atoms and 24 Dy atoms. Synth. from elements. Mp *ca.* 2150°. Refractory. V. hard.

Erbium borides

In addition to phases described here, the diboride has also been reported.

Erbium boride* (ErB_4), *9CI, 8CI [12310-44-0]

Erbium tetraboride

B_4Er M 210.5

Tetragonal UB_4-type struct. becoming orthorhombic at 15K. Golden cryst. μ_{eff} = 8.98 (9.52)μ_B. Antiferromagnetic in weak field becoming ferromagnetic at higher fields.

Erbium boride* (ErB_6), *9CI, 8CI [12046-33-2]

B_6Er M 232.1

Cubic CaB_6-type struct. Blue solid.

Erbium boride* (ErB_{12}), *9CI, 8CI [12589-35-4]

Erbium dodecaboride

$B_{12}Er$ M 296.9

Cubic UB_{12}-type struct. Synth. from Er_2O_3 + B when heated at 1500-1700°. Mp 2082°. More resistant to oxidation than Er metal. Resistant to HCl, H_2SO_4, and dec. only by oxidising acids (aq. regia, HNO_3).

Erbium boride* (ErB_{66}), *9CI [37322-39-7]

$B_{66}Er$ M 880.7

Struct. has B_{12} icosahedron surrounded by 12 B_{12} linked icosahedra. Unit cell contains 1584 B atoms and 24 Er atoms. Synth. from elements. Mp *ca.* 2150°. V. hard and refractory.

[BEu] IC-000822

Europium borides

[103370-73-6]

Borides < EuB_6 not observed.

Europium boride* (EuB_6), *9CI, 8CI [12008-05-8]

Europium hexaboride

B_6Eu M 216.8

Possesses the cubic CaB_6-type struct. with Eu(*II*) oxidation state. Synth. from Eu_2O_3 + H_3BO_3 + Mg at 1100°. Neutron absorber for fast reactors. Bluish solid. Mp 2660° (2580°). Semiconductor. Becomes ferromagnetic at <15K. Vaporises to elements. μ_{eff} = 8.1μ_B.

▷ Pyrophoric in dry or moist air (700-750°).

BF_4K

IC-000831

Potassium tetrafluoroborate (KBF_4)
Potassium fluoborate. Potassium borofluoride. Tetrafluoroborate, potassium salt
[14075-53-7]

KBF_4

M 125.9
Synth. by reaction of excess B_2O_3 with KCl and BrF_3. Commercially available. Used to harden steel (boronisation) and as a component of brazing fluxes. Colourless orthorhombic cryst. Undergoes orthorhombic to cubic transition at 283°. Sl. sol. H_2O (0.4 g per 100 cm^3 at 20°; 6.3 g per 100 cm^3 at 100°); spar. sol. Et_2O, EtOH. Mp 570°. ΔH_f° –1887 kJ mol^{-1}; ΔG_f° –1785 kJ mol^{-1}; S° 134 J K^{-1} mol^{-1}.

▷ Corrosive. ED2800000.

Mineral-form [1303-68-0]
Avogadrite
Contains Cs: $(K,Cs)BF_4$. Sublimation product at Mt. Vesuvius. Minute cryst.

BF_4Li

Lithium tetrafluoroborate(LiBF$_4$)
Tetrafluoroborate(1 –), lithium salt, 8Cl
[14283-07-9]

$LiBF_4$

M 93.7
Synth from LiF + BF_3 in THF or 1,2-dimethoxyethane. Commercially available as solid or in soln. (1.0 *M*) in MeCN. Electrolyte for use in non-aq. lithium batteries. Reagent for the cleavage of silyl ethers, the mild high yield hydrolysis of acetals and ketals, the addition of arenesulfonyl chlorides to olefins and the electrooxidative C—C cleavage of cyclohexanones. Hygroscopic. Dec. on heating into constituent fluorides (dissociation pressure ~ 675 mm Hg at 300°). ΔH_f° −1876 kJ mol^{-1}; ΔG_f° −1777 kJ mol^{-1}.

▷ Irritant.

Monohydrate: [39863-03-6].
BF_4H_2LiO M 111.7
Colourless orthorhombic cryst.

Trihydrate: [39863-05-8].
Colourless hexagonal cryst. Dec. at 23° with H_2O loss to give monohydrate.

BF_4Na IC-000833
Sodium tetrafluoroborate ($NaBF_4$)
Sodium fluoborate, 8CI. Sodium borofluoride
Tetrafluoroborate, sodium salt
[13755-29-8]

$NaBF_4$

M 109.7
Synth. either by neutralisation of NaOH or Na_2CO_3 with aq. HBF_4 (excess HF) or by reaction of BF_3 with NaF. Alternatively HF can be absorbed in aq. borax to produce $NaBF_4$ directly. Commercially available. Used in the electroplating industry. Grain refining agent for aluminium. White orthorhombic cryst. Dec. on heating >200° to form NaF and BF_3. V. sol. H_2O (108 g per 100 cm^3 at 26°; 210 g per 100 cm^3 at 100°); spar. sol. EtOH. Mp 322°

▷ Corrosive. ED2975000.

Mineral-form [24203-02-9]
Fersuvite
Occurs as a sublimation product around fumaroles on Mt. Vesuvius. Minute tabular cryst.

[28625-02-7]

$Tl[BF_4]$

M 291.1
Isostructural with barite structure - orthorhombic; transforms to cubic at 201.7°. Synth. from 40% fluoroboric acid + Tl_2CO_3. Colourless, moisture-sensitive solid. Spar. sol. H_2O.

▷ Highly toxic. ED3150000.

Yeager, H.L. *et al, J. Phys. Chem.*, 1970, **74**, 963 (*synth*)
Pistorius, C.W.F.T., *Z. Anorg. Allg. Chem.*, 1970, **376**, 308 (*struct*)

$BF_6H_2Si_2^{\ominus}$ IC-000837
Dihydrobis(trifluorosilyl)borate(1−), 10CI

$[(F_3Si)_2BH_2]^{\ominus}$

M 182.9 (ion)

Tetrabutylammonium salt: [74354-31-7].
Not isol. Sol. CH_2Cl_2.

Brownstein, S., *J. Chem. Soc., Chem. Commun.*, 1980, 149 (*synth, pmr, B-11 nmr, F-19 nmr*)

$BF_{10}O_3Te_3$ IC-000838
Tris[pentafluorotellurato(*VI*)]boron
Tris[pentafluorotellurato(VI)]borane. Boron tris[pentafluorotellurate(VI)]. Tellurium borate fluoride ($Te_3(BO_3)F_{15}$)
[40934-88-1]

$B(OTeF_5)_3$ (D_{3h})

M 726.5
B in planar environment. Synthesis: BCl_3 + $3TeF_5OH$ at −80°. Lewis acid comparable to BCl_3. Reagent for introduction of -$OTeF_5$ group. Colourless cryst., readily hydrol., subl. at r.t. *in vacuo*. Sol. CCl_3F, $PhNO_2$, relat. solvs. Mp 37°. Dec. >140°.

Sladky, F. *et al, J. Chem. Soc., Chem. Commun.*, 1973, 134 (*synth, ms, ir, F-19 nmr, thermochem, deriv*)
Sawyer, J.F. *et al, Acta Crystallogr., Sect. B*, 1982, **38**, 1561 (*cryst struct*)

$BFe_{0.8}Ni_{0.2}$ IC-000839
Iron-nickel-boron alloys

(Fe,Ni)B

M 68.0
Listed here under sample formula. Prepd. from constituent elements of high purity with rapid quenching from the melt. Used in transformer cores. An amorphous ferromagnet. There is only a small difference in moment (<5%) between the cryst. and amorphous forms.

O'Handley, R.C. *et al, Appl. Phys. Lett.*, 1976, **29**, 330 (*synth, ferromagnetism*)
Luborsky, F.E., *Ferromagnetic Materials*, North-Holland, Amsterdam, 1980, **1**, 451.

[BFe] IC-000840
Iron borides
[39383-96-5]

Iron boride (Fe_3B), 9CI, 8CI [12006-86-9]
Trilron monoboride
BFe_3 M 178.3
Metastable orthorhombic and tetragonal phases of sl. different stoichiometries; orthorhombic form is essentially isostruct. with Fe_3C (cementite). T_c 800K. Highly unstable.

Iron boride (Fe_2B), 9CI, 8CI [12006-85-8]
Dilron monoboride
BFe_2 M 122.5
Tetragonal lattice of the $CuAl_2$-type. Sol. HNO_3, HCl aq. (1:1), H_2SO_4 (1:1) and $HClO_4$. Reacts with boiling H_2O. Mp 1390°. Ferromagnetic. μ_{eff} = 1.91μ_B; T_c 1013K.

Iron boride (FeB), 9CI, 8CI [12006-84-7]
Iron monoboride. Iron(III) boride
BFe M 66.6
Orthorhombic cell with each B atom surrounded by 6 Fe atoms at vertices of a trigonal prism; B atoms form infinite chains. Basic struct. is hcp. Synth. from FeS + BCl_3 under H_2 at >500°; or from $FeCl_2$ aq. + $NaBH_4$. Hydrogenation catalyst. Sol. dil. and conc. HNO_3, conc. and 1:1 HCl aq., H_2SO_4 (1:1) and $HClO_4$. Mp 1540°. μ_{eff} = 1.11μ_B. Exists in low temp. α-form and higher temp. β-form with identical T_c (602K) α→β with change in magnetic moment. Both forms ferromagnetic. Reacts with boiling H_2O.

Iron boride (FeB_2), 9CI, 8CI [12007-18-0]
B_2Fe M 77.4
Reported to exist in Fe-B alloys. Mp 1410°.

[60581-41-1]

IC-000845

$BFe_{14}Nd_2$
Iron neodymium boride ($Fe_{14}Nd_2B$)
[92090-39-6]

$Nd_2Fe_{14}B$

M 1081.1
Tetragonal lattice with 4 molecules per cell. Nd atoms at centre of hexagonal prisms of B atoms, and B atoms at centres of trigonal prisms of Fe atoms. Synth. from Fe,B, B and Nd at 700-1000°, sintering at 550-650° or from elements at 1130°. High coercive strength ferromagnet, mag. props. enhanced by inclusion of small amounts of Tb, Dy, Co. Mp *ca.* 1450°. T_c 600K (581 K). Absorbs H_2.

Hirosawa, H. *et al*, *J. Appl. Phys.*, 1986, **59**, 873 (*magnetism*)

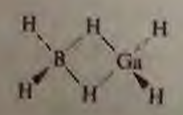
$BGaH_6$ IC-000850
Gallaborane(6)



M 86.5
Colourless gas. Sol. toluene. Mp *ca.* −45°. V. p. *ca.* 1 mm at −78°. Dec. at > −35°.

Pulham, C.R. *et al*, *J. Chem. Soc., Chem. Commun.*, 1990, 177 (*synth, ir, pmr, ^{11}B nmr, ed, struct*)

[BGd] IC-000851
Gadolinium borides
[60861-13-4]

Gadolinium boride (GdB_2), 9CI, 8CI [60304-77-0]
B_2Gd M 178.8
Has the AlB_2-type struct. Synth. from Gd + B at 1240° and high pressure.

Gadolinium boride (GdB_4), 9CI, 8CI [12007-54-4]
Gadolinium tetraboride

B_4Gd M 200.4
Has the tetragonal UB_4-type struct. Synth. from Gd_2O_3 + B at 1800°; or by melting GdB_6. Golden lustrous cryst. Mp *ca.* 3000°. μ_{eff} = 8.07 (7.4)μ_B. Antiferromagnetic at low temp.

Gadolinium boride (GdB_6), 9CI, 8CI [12008-06-9]
Gadolinium hexaboride
B_6Gd M 222.1
Synth. from Gd_2O_3 + B at 1500-1850°, or from Gd_2O_3 + H_3BO_3 + Mg at 1200°. Employed in hard metal coatings. Violet cryst. Mp 2510° dec. At 1925° dissociates into elements via GdB_4 (at 1550°).

Gadolinium boride (GdB_{12}), 9CI, 8CI [37342-51-1]
Gadolinium dodecaboride
$B_{12}Gd$ M 286.9
Cubic UB_{12}-type struct. Synth. from elements at high pressure.

Gadolinium boride (GdB_{66}), 9CI [37322-40-0]
$B_{66}Gd$ M 870.7
Struct. has B_{12} icosahedron surrounded by 12 B_{12} linked icosahedra. Unit cell contains 1584 B atoms and 24 Gd atoms. Synth. from elements. Mp *ca.* 2150°. V. hard and refractory.

$BGeH_6^{\ominus}$ IC-000852
Germyltrihydroborate(1−)

$[H_3GeBH_3]^{\ominus}$

M 89.4 (ion)
K salt: [21349-89-3]. *Potassium germyltrihydroborate*
$BGeH_4K$ M 128.5
Moisture sensitive white solid (Et_2O). Mp 98-99° (under Ar). When heated to 200° dec. to H_2, volatile GeH_4, Ge and KBH_4.

Rustad, D.S. *et al*, *Inorg. Chem.*, 1968, **7**, 213 (*synth, ir, pmr, props*)

BHI_2 IC-000853
Diiodoborane, 10CI, 9CI
[43338-13-2]

I_2BH

M 265.6
Prototype of the alkyldiiodoborane series of compds. Prepd. *in situ* by adding I_2/THF to BH_3 at 0°. Air-sensitive. Sol. THF.

Et_3N complex: [56598-29-9]. *Hydrodiiodo(triethylamine) boron. Diiodoborane triethylamine*
$C_6H_{16}BI_3$ M 352.8
Prepd. by the reaction of I_2 with triethylamine borane. Extremely sensitive to moisture, dec. on standing. Sol. toluene.

Me_3N complex: [25741-84-8]. *Hydrodiiodo(trimethylamine) boron. Diiodoborane trimethylamine*
$C_3H_{10}BI_3$ M 310.7
Prepd. by the reaction of I_2 with trimethylamine borane. Extremely sensitive to moisture, dec. on standing. Sol. toluene.

Dimethyl sulfide complex: [28920-40-3]. (*Dimethyl sulfide*) *hydrodiiodoboron. Hydrodiiodo[thiobis[methane]]boron, 10CI*
$C_2H_7BI_2S$ M 327.7
Useful means of storing diiodoborane; hydroborates alkenes to give alkyldiiodoboranes. Moisture-sensitive liq.

Phosphine complex: [41593-72-0].
BH_4I_2P M 299.6
Sol. MeI, CH_2Cl_2; pmr δ −6.30, J_{PH} 4.18 Hz; ^{31}P nmr δ + 95, J_{PH} 424 Hz.

$BHMgO_3$ IC-000854
Szaibelyite, 9CI
Ascharite (absol.), Camsellite (absol.)
[12447-04-0]

$MgBO_2(OH)$

M 84.1
Can also be formulated $2MgO.B_2O_3.H_2O$ or $Mg_2B_2O_5.H_2O$. Widespread, found in e.g. USA, Hungary, Germany, USSR, Korea, Sweden. Colourless to straw-yellow monoclinic cryst.

[36564-04-2, 51198-60-8]

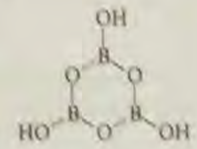
BHO_2 IC-000855
Boric acid (HBO_2), 11CI, 10CI
Metaboric acid
[13460-50-9]



α-form (*trimer*)

M 43.8
Common product of hydrolysis and pyrolysis of many boron compds. Three cryst. forms known.

Boric acid ($H_3B_3O_6$) [13460-51-0]
α-form. HBO_2-III form. Orthorhombic-form
$B_3H_3O_6$ M 131.4
All B atoms are 3-coordinate in solid state. Colourless hygroscopic solid. Sol. H_2O. Mp 176°. ΔH_f° −788.8 kJ mol^{-1} (least stable form).

Boric acid ($H_3B_3O_7$), ***monohydrate***
β-form. HBO_2-II form. Monoclinic-form
$B_3H_5O_7$ M 149.4
Retains same skeleton as α-form, but with ¼ B additionally bonded to a water molecule. Colourless solid. Mod. sol. H_2O. Mp 200.9°. ΔH_f° −794.3 kJ mol^{-1}.

Boric acid ($H_3B_3O_8$), ***dihydrate***
γ-form. HBO_2-I form
$B_3H_7O_8$ M 167.4
Cyclic struct. of α-form is extended into 3D network of BO_4-tetrahedra with strong H-bonding in solid state. Colourless solid. Spar. sol. H_2O, alcohols. Mp 236°. ΔH_f° −804.0 kJ mol^{-1} (most stable form).

$BH_2MnO_{40}W_{11}^{7\ominus}$ IC-000858

Tungstomanganoborate ($H_2BMnW_{11}O_{40}^{7\ominus}$)

$[H_2BMn^{II}W_{11}O_{40}]^{7\ominus}$

M 2730.0 (ion)
Heteropolytungstate. Rapidly formed in aq. soln. from $Mn^{2\oplus}$ and $BW_{11}O_{39}^{9\ominus}$. Free acid unstable. Solns. of $[H_2BMn^{II}W_{11}O_{40}]^{7\ominus}$ undergo oxidation in air at r.t. to give $[H_2BMn^{III}W_{11}O_{40}]^{6\ominus}$.

Hepta-K salt: Prepd. from aq. $Na_2WO_4.2H_2O$ (pH 6.3), H_3BO_3 and $Mn^{2\oplus}$ followed by addition of a K salt. Tetragonal brown yellow needles + $16H_2O$.
Na, hexa-K salt: Isol. from solns. left from the synth. of the Hepta-K salt. Solid + $14H_2O$.

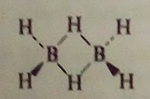
BH_3 IC-000859

Borane
Borine. Boron hydride
[13283-31-3]



dimer

M 13.8
Exists as the dimer (diborane) unless complexed with a nucleophilic sp. The THF soln., dimethyl sulfide complex, and other complexes are important hydroborating and reducing agents.
▷ Violent reaction with oxygen.

Dimer: [19287-45-7]. *Diborane(6), 10Cl. Boroethane*
B_2H_6 M 27.6
Hydroborating and reducing reagent as soln. in THF or ethers. Deuterated diborane useful for incorporation of deuterium into org. molecules. Thermolysis is a major route to higher boranes. Colourless air- and moisture-sensitive gas. Sol. THF as BH_3-THF complex. Mp −165.5°. Bp −92.5°.
▷ HQ9275000.

BH_3O_3 IC-000861

Boric acid (H_3BO_3), 9Cl, 8Cl
Boracic acid. Orthoboric acid
[10043-35-3]

$B(OH)_3$

M 61.8
Common product of hydrol. of many boron compds. containing B—Hal, OR, SR, H, NR_2 etc. bonds. Antibacterial agent. Commercially available. Widely used in industry, e.g. precursor for borate glasses, component of buffer solns., fluxes for welding, fireproofing material. Catalyst for air oxidation of hydrocarbons and esterification of carboxylic acids. Pearly scales. Mp 171°. Component of Aci-Jel, Blinx, Bluboro, Borofax, Collyrium Eye Drops, Wyanoids. ΔH_f° −1094.3 kJ mol^{-1}. Melting point often indefinite owing to gradual dehydration on heating.
▷ ED4550000.

Mineral-form
Sassolite
Found in the waters of various lakes, eg. in Tuscany, Germany, California; also associated with hot springs. White to grey soft pearly triclinic cryst.

IC-000889

BH_4NaO_4

Sodium tetrahydroxyborate

Sodium metaborate dihydrate

[7632-04-4]

$Na[B(OH)_4]$

M 101.8

May also be formulated as $NaBO_2.2H_2O$ or $Na_2O.B_2O_3.4H_2O$. Component in cloth finishing treatments, detergents, photographic solns. and agricultural sprays. Colourless cryst. (H_2O), loses H_2O on standing at r.t. Sol. H_2O, MeOH, spar. sol. EtOH. Reacts with CO_2.

Dihydrate: [10555-76-7]. *Sodium tetrahydroxyborate dihydrate. Disodium diborate tetrahydrate*

BH_8NaO_6 M 137.8

Colourless cryst. Dehydrates *in vacuo*.

$BH_8Na_2O_7$

Sodium perborate tetrahydrate
Sodium peroxoborate. Boric acid (HBO_2) sodium salt compd. with hydrogen peroxide (H_2O_2) (1:1) trihydrate, 8CI
[18283-88-0]

M 176.8
Generally formulated as $NaBO_2.H_2O_2.3H_2O$ although $NaBO_3.4H_2O$ was also used in the early literature. Structural analysis suggests the formulation shown above. Manuf. by electrolysis from $Na_2B_4O_7$. Chemically produced in aq. soln. from $NaBO_2$ (or $Na_2B_4O_7$ and NaOH) by reaction with either H_2O_2 or a mixture of H_2O_2 and Na_2O_2. Commercially available. Bleaching agent (containing 10.4% active oxygen); used extensively in detergents. Bactericide. Oxidising agent in org. chem. Colourless cryst. stable when cool and dry. Sol. $H_2O \rightarrow H_2O_2$. Mp 65.5° (63°). Other degrees of hydration also known.

▷ Toxic by ingestion.

Triiodoborane, 11CI, 10CI, 9CI

Boron iodide (BI_3), 8CI. Boron triiodide

[13517-10-7]

BI_3

M 391.5

Strong Lewis acid, reacts with protic solvs. Commercially available. Colourless cryst.; light sensitive, dec. products incl. I_2. Sol. C_6H_6, CS_2, CH_2Cl_2. Mp 49.9°. Subl.$_{0.5}$ 60°, 210° (est.). ΔH_{fc}° −38.5 kJ mol^{-1}.

▷ Reacts violently with H_2O.

[BMg] IC-000897

Magnesium borides

[12795-15-2]

Mg borides are generally not well-characterised. There is no evidence as yet for MgB and little for MgB_4.

Magnesium boride* (MgB_2), *9CI, 8CI [12007-25-9]

B_2Mg M 45.9

AlB_2-type struct. Synth. from elements at 1200-1400°. Highly reactive to HNO_3, H_3PO_4, HCl and H_2SO_4. At 1150° → MgB_4.

***Magnesium boride* (MgB_6)** [12008-22-9]

Magnesium hexaboride

B_6Mg M 89.1

Synth. from B + Mg at 1100°. Mp 1100° dec. Resistant to boiling 6*M* HCl. Slowly attacked by boiling $HClO_4$ or conc. HNO_3, or aqua regia.

Magnesium boride* (MgB_{12}), *9CI, 8CI [12230-32-9]

Magnesium dodecaboride

$B_{12}Mg$ M 154.0

Synth. from Mg + B → MgB_7 at 1250°. Mp 1300° dec. Resistant to boiling 6*M* HCl.

[BMn] IC-000898

Manganese borides

Six phases described here.

Manganese boride* (Mn_4B), *10CI [12260-22-9]

BMn_4 M 230.5

Struct. built up of parallel sheets of Mn tetrahedra with B atoms in square antiprismatic voids randomly half-filled at the composition Mn_4B. Struct. may be regarded as one of Mn_3B with lower symmetry and unoccupied B places. Synth. by sintering and annealing a mixture of the elements at 1050° in sintered alumina crucibles under Ar. If temps. exceed 1100° the presence of excess B causes formation of Mn_2B and Mn. Cryst.

Manganese boride* (Mn_2B), *11CI [12045-16-8]

BMn_2 M 120.6

Struct. consists of layers of Mn atoms in close contact with isolated B atoms in square antiprismatic holes. Adopts $CuAl_2$ struct. with tetragonal symmetry. Obt. by sintering and annealing Mn-B mixtures in evacuated silica tubes at 1100-1200° for 7-10 d or in alumina crucibles under Ar at 900-1350°. Reddish brown cryst.; hard and brittle. Mp 1580°.

Manganese boride* (*MnB*), *11CI [12045-15-7]

BMn M 65.7

Struct. consists of trigonal prisms of Mn, with zig-zag chains of B (like FeB). Obt. from elements in sealed silica tubes at 1100-1200°. Lustrous reddish-brown cryst. Mp 1860-1920°. Curie temp. 578K. Ferromagnetic.

Manganese boride* (Mn_3B_4), *11CI [12229-02-6]

B_4Mn_3 M 208.0

Isostructural with Ta_3B_4, comprising trigonal prisms of Mn atoms containing one B atom or B—B double chains consisting of planar six membered rings plus Mn atoms. Synth. from the elements in evacuated silica tubes at 1100-1200° for 7-10 d. Reddish brown cryst. with a metallic lustre. Mp 1750° dec. Antiferromagnetic >230K.

Manganese boride* (MnB_2), *11CI [12228-50-1]

B_2Mn M 76.5

Struct. contains planar, hexagonal, graphite like layers of B stacked alternately with hcp layers of Mn (like AlB_2). Obt. from the elements by arc melting. Metallic conductor. Grey-violet cryst. Mp 1988°.

Antiferromagnetic; weakly ferromagnetic at T_c 157K. At 800° → MnB_4 + Mn_3B_4.

Manganese boride* (MnB_4), *11CI [12271-96-4]

B_4Mn M 98.1

Monoclinic, struct. contains a boron framework of 4-membered rings. Obt. by arc melting Mn and crystalline B. Can also be prepared from MnB_2 at 750°: $4MnB_2$ → MnB_4 + Mn_3B_4. Cryst. Mp ~2160°.

[BMo] IC-000899

Molybdenum borides

[12626-91-4]

Molybdenum boride* (Mo_2B), *9CI, 8CI [12006-99-4]

BMo_2 M 202.6

Tetragonal $CuAl_2$-type struct. Synth. from BBr_3 + $MoCl_5$. Refractory. Important uses as a braze and in cutting tools. Oxidises in air on heating. Insol. H_2O. Mp 2280°, Mp 2000° dec.

Molybdenum boride* (*MoB*), *9CI, 8CI [12006-98-3]

BMo M 106.7

Dimorphic, with α- tetragonal form and β- rhombic (CrB or VB struct. type) form. Synth. from BN + Mo (CrB or VB struct. type) form. Synth. from BN + Mo at 1400-1600° or $MoCl_5$ + BBr_3. Refractory, used as braze and in cutting tools. Sol. H_2SO_4 (1:2) + HNO_3 at 150°, insol. H_2O. Mp 2550-2600° (β-form), Mp 2180°. When finely divided, begins to oxidise in air at *ca.* 650°.

Molybdenum boride* (MoB_2), *9CI, 8CI [12007-27-1]

Molybdenum diboride

B_2Mo M 117.5

Composition actually $MoB_{1.8}$-$MoB_{2.0}$. Has the hexagonal AlB_2-type struct. Synth. from Mo_2B_5 at >1600° or elements. Refractory, used in braze and in cutting tools. Oxidises in air on heating. Mp 2350°, Mp 2300° (2100°) dec.

Molybdenum boride* (Mo_2B_5), *9CI, 8CI [12007-97-5]

B_5Mo_2 M 245.9

Rhombic. Synth. from Mo_2O_3 + B_2O_3 + Mg at 1200°, MoO_2 + B_4C + C, or elements at 1200-1500°. Mp 2315° (2100°). At >1600° → MoB_2. Stable to HCl (1:1), H_2SO_4 (1:1), 5-20% aq. NaOH. Attacked by fused NaOH. Dec. by 30% H_2O_2 and acids containing H_2O_2.

§ 04681000.

Molybdenum boride* (MoB_4), *9CI, 8CI [12265-21-3]

B_4Mo M 139.1

Tetragonal, isomorphous and isodimensional with WB_4. UB_4-type struct.

Molybdenum boride* (MoB_{12}), *9CI, 8CI [12305-71-4]

Molybdenum dodecaboride

$B_{12}Mo$ M 225.6

Hexagonal. Observed in Mo—W—B ternary system.

BN

Boron nitride (BN) IC-000900

[10043-11-5]

BN

M 24.8

Primarily found in a hexagonal form (α-BN). Zinc blende-type (β-BN) and wurtzite-type (γ-BN) forms also exist. Commercially available.

α-form

Prepd. by igniting B compds. with N compds. Used as a ceramic, e.g. for crucibles. Soft white powder. Struct. resembles that of graphite except that the rings in one layer are stacked directly on top of the rings in adjacent layers. Insol. H_2O. Subl. 2330° (under nitrogen).

β-form

Borazon

Formed from α-BN at 85000 atm. and 1800°. An abrasive. Colourless when pure. V. hard. Structure is related to that of cubic diamond.

γ-form

Formed by static compression of α-BN at 11.5-12 × 10^4 atm. and ≤600° or by shock compression up to 5.5 × 10^5 atm. Structure is related to that of hexagonal diamond.

$BNaO_2$

Sodium metaborate IC-000902

Boric acid (HBO_2), sodium salt, 8CI. Sodium polydioxoborate(III). Polydioxoboric(III) acid, sodium salt

[7775-19-1]

$NaBO_2$

M 65.8

The Na_2O-B_2O_3 system forms an extensive series of glasses. Prepd. from $NaBH_4$ either by hydrol. or by reaction with air at 300-450°. Alternatively, it can be formed by heating equimolar quantities of Na_2CO_3 and $Na_2B_4O_7$ or

by reaction of H_3BO_3 with NaOH or Na_2CO_3. Commercially available as hydrate. Fireproofing agent. V. sol. H_2O V. hygroscopic colourless hexagonal cryst. V. sol. H_2O (26 g per 100 cm^3 at 20°, 36 g per 100 cm^3 at 35°); insol. EtOH, Et_2O. Mp 967°. Bp 1434°. ΔH_f° −976 kJ mol^{-1}; ΔG_f° −919 kJ mol^{-1}; S° 73.55 J K^{-1} mol^{-1}

$BNaO_3$ IC-000903

Sodium perborate ($NaBO_3$)

[7632-04-4]

$NaBO_3$

M 81.7

Anhydrous form. Prepd. by heating the tetrahydrate. Used as an oxygen source. Hygroscopic, white amorph. powder. Evolves O_2 when dissolved in H_2O.
⚠ Can be detonated by light friction.

Monohydrate. [10332-33-9]
BH_2NaO_3 M 99.8
Prepn. by heating the tetrahydrate to 60°. Bleaching agent. Strong oxidising agent. White amorph. powder. Sol. H_2O (with liberation of H_2O_2). Mp 88°. Correctly formulated as $Na_2[B_2O_3(O_2)(OH)_2]$.
Sol. 1320880

Trihydrate. [28902-63-8]
BH_7NaO_6 M 135.8
Cryst. from aq. solns. of the pure tetrahydrate. White cryst. Mp 82°. Correctly formulated as $Na_2[B_2(O_2)_2(OH)_4].4H_2O$.

Tetrahydrate: see *Sodium perborate tetrahydrate, IC-000905*

Niobium borides

[12653-77-9]

***Niobium boride* (Nb_3B_2)** [12045-58-5]
B_2Nb_3 M 308.3
Tetragonal. Mp *ca.* 2000°

Niobium boride* (*NbB*), *9CI, 8CI [12045-19-1]
Niobium monoboride
BNb M 103.7
Orthorhombic CrB-type struct. Synth. from Nb_2O_5 + B_2O_3 + Mg at 1200°. Employed in refractory electrodes. Mp *ca.* 2200°.

Niobium boride* (Nb_3B_4), *9CI, 8CI [12045-89-5]
B_4Nb_3 M 321.9
Has the orthorhombic Ta_3B_4 (Mn_3B_4)-type struct. Synth. from Nb + BN at 1400-1700°. Mp *ca.* 2700°.

***Niobium boride* (NbB_2)** [12007-29-3]
Niobium diboride
B_2Nb M 114.5
Has the hexagonal AlB_2-type struct. Synth. from Nb_2O_5 + B or $NbBr_5$ + BBr_3. Mp *ca.* 3000°. Dec. by 5-20% aq. NaOH at 80°. Not attacked by HCl (1:1), HNO_3 (1:1). Dec. by H_2O_2 or acid solns. cont. H_2O_2. When finely divided, oxidation begins at *ca.* 650°.

Neodymium borides

NdB_{11} appears not to have been reported; existence of NdB_{66} in doubt.

Neodymium boride* (NdB_4), *9CI, 8CI [12007-77-1]
Neodymium tetraboride
B_4Nd M 187.4
Tetragonal UB_4-type struct. Golden cryst. At 1850° *in vacuo* → NdB_6 + Nd. Antiferromagnetic.

Neodymium boride* (NdB_6), *9CI, 8CI [12008-23-0]
Neodymium hexaboride
B_6Nd M 209.1
Has the cubic CaB_6-type struct. Synth. from Nd_2O_3 + B at 1500-1800°. Blue-violet solid. Mp 2610° (2540°). Fairly unreactive to dil. HCl or H_2SO_4. Dissolves easily in aqua regia. Stable to 650-700°. Ignites at 710°. Oxidises at > 730° to $Nd(BO_2)_3$.

[BNi]

Nickel borides

[12619-90-8]

Nickel boride* (Ni_3B), *9CI, 8CI [12007-02-2]
BNi_3 M 186.8
Has the orthorhombic Fe_3C (cementite) struct. Mp 1165°. Resistant to boiling H_2O. Reactive to 25% $HClO_4$ aq.

Nickel boride* (Ni_2B), *9CI, 8CI [12007-01-1]
BNi_2 M 128.1
Has the tetragonal $CuAl_2$-type struct. Synth. from $Ni(OAc)_2$ + $NaBH_4$ → black ppt. stored under MeOH. Hydrogenation catalyst. Mp 1230°.

Nickel boride* (Ni_4B_3), *9CI, 8CI [12045-67-9]
B_3Ni_4 M 267.1
Dimorphic. The orthorhombic Ta_3B_4 form has 3 types of interconnected Ni trigonal prisms with B atoms at centres. The monoclinic form is built up of close-packed, sl. corrugated Ni atom layers with B atom chains in the metal atom lattice. Mp 1025° (orthorhombic) 1902° 1031° (monoclinic). Resistant to boiling H_2O. Completely reactive to 25% $HClO_4$ aq.

Nickel boride* (*NiB*), *9CI, 8CI [12007-00-0]
Nickel monoboride
BNi M 69.5
Has the CrB (VB)-type struct. Synth. from NiS + BCl_3 + H_2 at 500-800°. Sol. cold aqua regia. Resistant to $HClO_4$. Part. sol. H_2SO_4 or H_3PO_4. Mp 1080°.

Nickel boride* (NiB_2), *9CI, 8CI [12045-56-6]
Nickel diboride
B_2Ni M 80.3
Component of the Ni-B system.

$BO_{40}ReW_{11}^{4\ominus}$ IC-000914

Rhenatungstoborate ($BReW_{11}O_{40}^{4\ominus}$)

Polybarotetrarhenatungstate(4−), 11-Tungstorhenborate(4−)

$[BW_{11}ReO_{40}]^{5\ominus}$

M 2859.3 (ion)
Contains Re(VII). Heteropolyanion with a Keggin struct.
Tetrakis-tetrabutylammonium salt: [91741-66-1]
Synth. from $Na_9BW_{11}O_{39}$ and $[ReO_3Py_4]Br.2H_2O$ in buffered H_2O followed by $[Bu_4N]Br$. Yellow cryst.

Herve, F. et al, Inorg. Chem., 1988, **23**, 3292 (*synth, struct, electrochem, spectr, stab, ir, props*)

$BO_{40}W_{12}^{5\ominus}$ IC-000915

Tungstoborate ($BW_{12}O_{40}^{5\ominus}$), 8CI

Tungstate. Tetracosa-μ-oxododecaoxo[μ_{12}-12-Borotungstate. Tetracosa-μ-oxododecaoxo[μ_{12}-[tetrahydroxyborato(5−)]]dodecatungstate(5−), 10CI

[12513-03-0]

$[BW_{12}O_{40}]^{5\ominus}$

M 2856.9 (ion)
A Keggin-type heteropolyanion. Prepd. by heating $[WO_4]^{2\ominus}$ with H_3BO_3 in aq. HCl.

Penta-K salt: [11078-54-9].
Cryst. (H_2O).

Penta-H compd.: see *Tungstoboric acid* ($H_5BW_{12}O_{40}$), *IC-000879*

Tetrakis-tetrabutylammonium salt, H compd.: [83844-83-1].
Solid + H_2O ($MeCN/Et_2O$).

BP IC-000916

Boron phosphide (BP), 9CI

[20205-91-8]

BP

M 41.7
Has the zinc-blende struct. Prepd. by direct union of B and red P at ~ 1000° in a reducing atm. Several other methods of prepn. have been reported. Commercially available. Semiconductor. Refractory maroon powder. Insol.

▷ Ignites at 200°. Emits toxic fumes in contact with H_2O and acids.

Perri, J.A. et al, Acta Crystallogr., 1958, **11**, 310 (*cryst struct*)

[BPd] IC-000917

Palladium borides

Palladium boride (Pd_3B), 9CI, 8CI [12429-53-7]
BPd_3 M 330.0
Has the Fe_3C (cementite)-type struct. Composition nearer to $Pd_{3.25}B$. Synth. from Pd + B at 1400-1500° and from $Pd(MeCN)_2Cl_2$ in toluene with B in K. Mp 1110° (820°).

Palladium boride (Pd_2B_3), 9CI, 8CI [11130-91-9]
B_3Pd_2 M 533.7
Composition nearer to $Pd_{1.25}B_3$. Monoclinic lattice. Corrugated layers of Pd atoms at corners of interconnected squares and triangles. B atoms at centres of hexagonal prisms. Synth. from Pd + B at 800-900°. Mp 1190° (870°).

Stenberg, E., Acta Chem. Scand., 1961, **15**, 861 (*synth, cryst struct*)
Samsonov, G.V. et al, Zh. Prikl. Khim. (Leningrad), 1971, **44**, 2369; *J. Appl. Chem. USSR (Engl. Transl.)*, 1971, **44**, 2552 (*synth*)

[BPr] IC-000918

Praseodymium borides

Thought not to form PrB_{66} phase.

Praseodymium boride (PrB_4), 9CI, 8CI [12007-78-2]
B_4Pr M 184.1
Has the tetragonal UB_4-type struct. Black cryst. Ferromagnetic (T_c 25K). Dissoc. → PrB_6 at 1950° in high vacuum.

Praseodymium boride (PrB_6), 9CI, 8CI [12008-27-4]
Praseodymium hexaboride
B_6Pr M 205.7
Has the cubic CaB_6-type struct. Synth. from the oxide + B at 1500-1800°. Blue solid. Mp 2610° dec. Fairly stable to dil. acids. Dissolves in HNO_3 or conc. H_2SO_4 with dec. When melted → PrB_4. Undergoes phase transitions at 6.9K and 4.2K.

[BPt] IC-000919

Platinum borides

Two phases, Pt_2B and Pt_4B reported.

Platinum boride (Pt_2B) [12228-36-3]
BPt_2 M 400.9
Has AlB_2 type struct. built up of close packed layers of metal atoms and B atoms arranged in trigonal prismatic geometry around each Pt atom forming three types of layers of B atoms. Synth. by electrochem. redn. of borate anion with Pt electrode.

Hassler, E. et al, J. Less-Common Met., 1979, **67**, 567 (*synth, cryst struct*)
Gonzalez, M. et al, Electrochim. Acta, 1984, **29**, 737 (*synth*)

[BRe] IC-000920

Rhenium borides

Re_3B has also been reported.

Rhenium boride (Re_3B_2), 9CI, 8CI
B_2Re_3 M 1323.0
Struct. composed of octahedra, tetrahedra and trigonal prisms of Re atoms. Synth. from elements.
Commercially available. A superconductor at 1.08K.

Rhenium boride (ReB_2), 9CI, 8CI [12355-99-6]
B_2Re M 207.8
Hexagonal cell. Struct. has alternating planar layers of Re atoms and puckered B atom layers. Synth. from elements. Mp ca. 2400° (2280°).

Aronsson, B. et al, Acta Crystallogr., 1961, **15**, 878 (*cryst struct*)

[BReU] IC-000921

Rhenium uranium borides

Rhenium uranium boride ($ReUB_3$) [107069-58-9]
B_3ReU M 456.6
Hexagonal. Isol. from the U—Re—B phase system.

Rhenium uranium boride ($ReUB_4$) [56994-90-9]
B_4ReU M 467.4
Isotypic with $ThMoB_4$. Synth. from B, Re and U at 1700°.

Rhenium uranium boride (ReU_2B_6) [107069-62-5]
B_6ReU_2 M 727.1
Y_2ReB_6 type. Isol. from the U—Re—B phase system.

Rogl, P. et al, Monatsh. Chem., 1975, **106**, 587 (*synth, struct*)
Val'ovka, I.P. et al, Poroshk. Metall. (Kiev), 1986, **30**, C.A. **106**, 108676w (*phase equil, struct*)

[BReY] IC-000922

Rhenium yttrium borides

Rhenium yttrium boride ($Re_{11}YB$), 10CI [62339-28-0]
$BRe_{11}Y$ M 2147.9
bcc lattice. Isol. from the B—Re—Y phase system.

Rhenium yttrium boride ($ReYB_4$) [12523-84-1]
B_4ReY M 318.3
Isostructural with $YCrB_4$. From B—Re—Y system.

Rhenium yttrium boride (ReY_2B_6), 10CI [37233-87-7]
B_6ReY_2 M 428.8
Orthorhombic, related to $YCrB_4$ struct. Synth. from alloy of same composition at 1000°. Similar Tm, Tb compds.

Rhenium yttrium boride (ReY_3B_4), 10CI [71966-71-7]
B_4ReY_3 M 496.1
Isol. from the Y—Re—B phase system.

Rhenium yttrium boride (Re_3YB_3)
B_3Re_3Y M 876.9

Rhenium yttrium boride (ReY_2B_3), 10CI [71736-66-2]
B_3ReY_2 M 418.0
Isol. from the Y—Re—B phase system.

Rhenium yttrium boride (ReY_3B_3), 10CI [61246-03-5]
B_3ReY_3 M 528.6
Orthorhombic. Isol. from the Y—Re—B system, in equilibrium with $YRe_{2-x}YB_2$, Y and Y_2ReB_6.

Mikhalenko, S.I. et al, CA, **91**, 199648j (*phase studies, prepn*)

BRe_4Zr_9 IC-000923

Rhenium zirconium boride (Re_4Zr_9B)

[51680-87-6]

Re_4Zr_9B

M 1576.6

κ phase analogous to Co_2Al_5 and Mn_3Al_{10}. Synth. from B, Re and Zr at 1200°. Alloy.

Rogl, P. *et al*, *Monatsh. Chem.*, 1973, **104**, 1497 (*synth, struct*)

[BRh] IC-000924

Rhodium borides

[11129-95-6]

A rhodium boride prep. has been employed in hydrogenation of nitriles.

Rhodium boride* (Rh_3B_2), *9CI, 8CI [11089-99-9]

B_2Rh_3 M 752.7

Struct. composed of octahedra, tetrahedra and trigonal prisms of Rh atoms. Synth. from elements.

Rhodium boride* (Rh_3B_4), *9CI, 8CI [80891-55-0]

B_4Rh_3 M 557.7

Hexagonal lattice. Struct. composed of close packed layers of Rh atoms with B atoms in octahedral holes. Synth. from elements.

[12523-58-9, 60861-45-2]

Boron Refract. Borides, (Ed. Matkovich, V.I.), Springer-Verlag, Berlin, 1977 (*rev, bibl*)

[BRu] IC-000925

Ruthenium borides

The Ru-B system also contains $Ru_{11}B_8$ phase.

Ruthenium boride* (Ru_7B_3), *9CI, 8CI

B_3Ru_7 M 739.9

Formerly designated Ru_2B. Ru skeleton mainly tetrahedra, but also octahedra, and with B atoms in larger (octahedral) holes. Synth. from elements or from RuB at 930°. Superconductive at 3.38K.

Ruthenium boride* (*RuB*), *9CI, 8CI [12523-59-0]

Ruthenium monoboride

BRu M 111.8

Hexagonal WC struct. Synth. from B + Ru at 1200-1300°. Mp *ca.* 1600° (1520°). At 950° → Ru_7B_3.

Ruthenium boride* (Ru_2B_3), *9CI, 8CI [12356-00-2]

B_3Ru_2 M 234.5

Hexagonal lattice. Synth. from Ru + B at 1200-1300°. Mp 1600°

Ruthenium boride* (RuB_2), *9CI, 8CI [12360-00-8]

Ruthenium diboride

B_2Ru M 122.6

Orthorhombic. Synth. from B + Ru at 1200-1300°. Mp *ca.* 1600° dec.

[BSc] IC-000927

Scandium borides

Scandium boride* (ScB_2), *9CI, 8CI [12007-34-0]

Scandium diboride

B_2Sc M 66.5

Has the AlB_2-type struct. Synth. from Sc_2O_3 + B when heated in high vacuum. Mp 2250°.

Scandium boride* (ScB_6), *9CI, 8CI [12785-49-8]

Scandium hexaboride

B_6Sc M 109.8

Thought to have the CaB_6-type struct. Synth. from Sc_2O_3 + B at 1800°. A tetragonal dodecaboride has also been reported.

Peshev, P., *Rev. Int. Hautes Temp. Refract.*, 1967, **4**, 289 (*synth*)

Peshev, P. *et al*, *Mater. Res. Bull.*, 1970, **5**, 319 (*synth*)

BSe IC-000928

Boron selenide (BSe)

Selenoxoborane(2), 9CI

[29750-36-5]

BSe

M 89.7

Identified spectroscopically; may be dubious. Formed from B powder + Se at 2400° in the combustion tube of a high-temp. vacuum graphite tube furance.

Puri, S.N. *et al*, *Acta Phys. Pol. A*, 1975, **47**, 533 (*mol spectrum*)

[BSi] IC-000929

Boron silicides

Silicon borides

[37299-94-8]

Boron silicide* (B_6Si), *9CI, 8CI [12008-29-6]

Silicon hexaboride

B_6Si M 92.9

Orthorhombic cell containing individual as well as interconnected icosahedra and isolated Si and B atoms. Synth. from B_2O_3 + Si or B + Si at 1600° under Ar.

Potential use in nuclear reactor control rods. Black cryst. Mp 1980° dec. (1860°). Reacts with Cl_2 at red heat. Acted on by boiling HNO_3. Unreactive to fused KNO_3. Rapidly attacked by alkali-carbonate melts.

Boron silicide* (B_4Si), *9CI, 8CI [12007-81-7]

Silicon tetraboride

B_4Si M 71.3

Isotypic with B_4C. Synth. from Si + B_2O_3, or Si + B at 2000-2500°. Potential use as blast-furnace lining and in nuclear reactor control rods. Mp 1870° dec. Unstable when heated in air → orthorhombic B_6Si.

***Boron silicide* (B_3Si)** [12007-50-0]

Silicon triboride

B_3Si M 60.5

Now thought to be identical to B_4Si.

***Boron silicide* (*BSi*)** [12589-02-5]

Silicon boride (SiB)

BSi M 38.8

[12589-02-5]

[BSm] IC-000930

Samarium borides

SmB_{12} appears not to have been reported.

Samarium boride* (SmB_4), *9CI, 8CI [12007-82-8]

Samarium tetraboride

B_4Sm M 193.6

Has the tetragonal UB_4-type struct. Bluish cryst. Antiferromagnetic at low temp. Metallic props. Dissociates *in vacuo* at 1650°.

Samarium boride* (SmB_6), *9CI, 8CI [12008-30-9]

Samarium hexaboride

B_6Sm M 215.2

Has the cubic CaB_6-type struct. Possesses an intermediate valence state ($Sm^{2\oplus}/Sm^{3\oplus}$). Synth. from Sm_2O_3 + B at 1500-1800°. V. thin bluish-black needles or platelets. Mp 2580° (2400°). Semiconductor. Dissoc. completely when heated. Stable to 650-700°, but ignites at 693°.

Samarium boride* (SmB_{66}), *9CI [37322-42-2]

$B_{66}Sm$ M 863.8

Struct. contains B_{12} icosahedron surrounded by 12 B_{12} linked icosahedra. Unit cell contains 1584 B atoms and 24 Sm atoms. Synth. from elements. Mp *ca.* 2150°. V. hard and refractory.

[12653-85-9]

Tantalum boride* (Ta_3B), *9CI, 8CI [12045-26-0]

BTa_3 M 372.7

Composition closer to $Ta_{2.4}B$. Has the tetragonal $CuAl_2$-type struct. Synth. from Ta_2O_5 + B at 2000°.

Tantalum boride* (Ta_2B_3), *9CI, 8CI [12228-67-0]

B_3Ta_2 M 564.4

Said to be a constituent in the Ta-Ti-B ternary system. Composition may be closer to $Ta_{1.1}B_2$.

Tantalum boride* (*TaB*), *9CI, 8CI [12007-07-7]

Tantalum monoboride

BTa M 191.7

Orthorhombic with CrB-type struct. Synth. from BN + Mo at 1500-1700°; Ta_2O_5 + B_2O_3 + Mg at 1200°, or B + Ta_2O_5 at 1200°.

Tantalum boride* (Ta_2B_4), *9CI, 8CI [12045-92-0]

B_4Ta_2 M 586.0

Orthorhombic struct. with B atoms in double chains with B-B bonding between chains. Minor product in reaction between BN and Ta at 1500-1700°. Also synth. from Ta_2O_5 + B at 1100°.

Tantalum boride* (TaB_2), *9CI, 8CI [12007-35-1]

Tantalum diboride

B_2Ta M 202.5

Has the hexagonal AlB_2-type struct. Synth. from BBr_3 + $TaBr_5$ or Ta oxide + B at 1500-1700°. Mp *ca.* 3200°. Resistant to HCl (1:1), H_2SO_4 (1:1), HNO_3 (1:1), $HClO_4$. Slowly reacts with H_2O_2 or acids containing H_2O_2; attacked by 5-20% aq. NaOH at 80° or fused NaOH. At 1250° → TaB + B. Dissolved by HF.

[BTb] IC-000933

Terbium borides

TbB_{66} has been reported

Terbium boride* (TbB_4), *9CI, 8CI [12688-53-8]
Terbium tetraboride
B_4Tb M 202.1
Tetragonal UB_4-type struct. Synth. from Tb_2O_3 + B_2O_3 + Mg at 1200°. Golden cryst. Mp *ca.* 2600°. Transition to orthorhombic form at *ca.* 80K. Antiferromagnetic at low temp. $\mu_{eff} = 9.64\mu_B$.

Terbium boride* (TbB_6), *9CI, 8CI [12008-31-0]
Terbium hexaboride
B_6Tb M 223.7
Has cubic CaB_6-like struct. Synth. from Tb_2O_3 + B at 1500-1800° or Tb_2O_3 + B_2O_3 + Mg at 1200°. Cathode material. Blue solid. Mp 2340° in vapour → TbB_4 + B. $\mu_{eff} = 9.43\mu_B$.

Terbium boride* (TbB_{12}), *9CI, 8CI [12589-39-8]
Terbium dodecaboride
$B_{12}Tb$ M 288.6
Has cubic UB_{12}-like struct. Synth. from oxide + B at 1500-1700° or Tb + B at 1650° and high pressure. Antiferromagnetic.

Thorium borides

Compds. ThB_4, ThB_6, ThB_{12} known. ThB_{66} and ThB_{76} also reported.

***Thorium boride* (ThB_4)** [12007-83-9]
Thorium tetraboride
B_4Th M 275.2
Isoatructural with UB_4; can be non-stoichiometric. Synth. from Th + B at 1400°. Black cryst. with metallic lustre. Mp >2500°. Unreactive to O_2 below 600°. Paramagnetic.

***Thorium boride* (ThB_6)** [12229-63-9]
Thorium hexaboride
B_6Th M 296.9
Has cubic CaB_6 struct. Synth. from elements at 1500°. Potential cathode in thermionic tubes. Dark violet-black metallic cryst. or dark red powder. Insol. H_2O; sol. HNO_3. Mp 2195°.

***Thorium boride* (ThB_{12})** [37342-55-5]
$B_{12}Th$ M 361.7
ZrB_{12} or UB_{12} struct. with 12-coord. Th. Obt. by high-pressure synth.

***Thorium boride* (ThB_{66})** [12344-97-7]
$B_{66}Th$ M 945.5
Isostructural with YB_{66}. Obt. at high B/Th ratio at 1900°. Cubic cryst.

Titanium borides

[12673-91-5]

In addition to the phases described here, Ti_2B_5 has been reported.

Titanium boride* (Ti_2B), *9CI, 8CI [12305-68-9]
M 106.5
BTi_2
Synth. from TiB_2 + Zr at 1600°.

Titanium boride* (*TiB*), *9CI, 8CI [12007-08-8]
Titanium monoboride
BTi M 58.6
Has the orthorhombic FeB-type struct. Synth. from TiB_2 + Zr, or Ti. Used in lightweight armour.

Titanium boride* (TiB_2), *9CI, 8CI [12045-63-5]
Titanium diboride
B_2Ti M 69.5
Has the hexagonal AlB_2-type struct. Synth. from $TiCl_4$ + BCl_3 under H_2 at >1000°, or from Ti_2S_3 + B at 750-900°, or TiO_2 + B_2O_3 + C at 1500-1800°. Employed in refractory materials and as metal coating. Brown solid. Mp 3225° (2850°). Attacked by HCl (1:1) (→H_2), or H_2SO_4 (1:1) (→H_2, H_2S, and SO_2) and by HNO_3 (1:1). Also attacked by 5-20% aq. NaOH at 80°, or completely by NaOH-KNO_3 flux at 600-650°. V. hard, has high thermal conductivity, low resistivity, low solubility in metals at <1000°. Resistant to oxidation at 1100°. With N_2 at 1550° → TiN.

Thulium borides

TmB_{66} has been reported.

Thulium boride* (TmB_4), *9CI, 8CI [12310-47-3]
Thulium tetraboride
B_4Tm M 212.1
Has the tetragonal UB_4-type struct. Golden cryst. Exhibits two magnetic transitions. $\mu_{eff} = 7.68\mu_B$.

Thulium boride* (TmB_6), *9CI, 8CI [12046-55-8]
Thulium hexaboride
B_6Tm M 233.8
Has the cubic CaB_6-like struct. In vap., dissociates to TmB_{12} + B.

Thulium boride* (TmB_{12}), *9CI, 8CI [12589-40-1]
Thulium dodecaboride
$B_{12}Tm$ M 298.6
Has UB_{12}-type struct. Synth. from Tm_2O_3 + B at 1450-1600°; or Tm_2O_3 + B_2O_3 + Mg at 1200°. Resistant to HCl, H_2SO_4 and dec. only by oxidising acids (*aqua regia*, cold HNO_3).

Uranium borides

[100502-82-7]

***Uranium boride* (UB_2)** [12007-36-2]
B_2U M 259.6
Isostructural with AlB_2. Catalyst for epoxidation of olefins. Nuclear reactor fuel. Metallic solid. Mp 2365°.

***Uranium boride* (UB_4)** [12007-84-0]
Uranium tetraboride
B_4U M 281.2
Isostructural with CeB_4. Tetragonal cell. Struct. is a hybrid of MB_2/MB_6 struct. types. Each U has 5 U atoms in its own planar layer. Between these layers are 3 U atoms above and 3 U atoms below. Boron present as B_6 octahedra. Synth. from elements or UF_4 + B or UF_4 + U_3O_8 + B at 1500°; UO_3 + B at 1300° - 1500°. Nuclear reactor fuel. Metallic solid. Sol. H_2O_2/HNO_3. Attacked slowly by hot conc. H_2SO_4, not by HCl, HF.

IC-000939

Vanadium borides

[12653-68-2]

Vanadium boride ***(V_2B_3), 9CI, 8CI*** [12421-53-5]
B_3V_2 M 174.4
Tetragonal lattice with U_3Si_2-type struct. Synth. from TiB_2 + V at 1300°. Mp 2060°.

Vanadium boride ***(VB), 9CI, 8CI*** [12045-27-1]
Vanadium monoboride
BV M 61.7
Has the orthorhombic CrB-type struct. Synth. from V + B in inert atm. or V_2O_3 + B_2O_3 + Mg at 1100°
Paramagnetic.

Vanadium boride ***(VB_2), 9CI, 8CI*** [12271-98-6]
B_2V M 196.0
Orthorhombic lattice, with hexagonal B atom chains and V atoms in trigonal prisms and rectangular pyramids. Ta_3B_4 struct.-type.

Vanadium boride ***(V_3B_4), 9CI, 8CI*** [12313-74-5]
B_4V_3 M 134.3
Orthorhombic lattice. Struct. based on double hexagonal B atom chains and trigonal prisms and rectangular pyramids of V atoms. Synth. from elements. Mp 2300°.

Vanadium boride ***(VB_{12}), 9CI, 8CI*** [12007-37-5]
Vanadium dodecaboride
$B_{12}V$ M 72.5
Has the hexagonal AlB_2-type struct. Synth. from (i) V_2O_5 + B_2O_3 + Mg at 1150° or (ii) V_2O_5 + B at > 1000°, or (iii) VS_2 + B at ≥ 1000°, or (iv) VCl_4 + BCl_3 under H_2. Mp 2450°. Stable to 5-20% aq. NaOH at 80°. Attacked by HCl (1:1), H_2SO_4 (1:1) (→ H_2, H_2S and SO_2), or HNO_3 (1:1).

Yttrium borides

Yttrium boride ***(YB_2)*** [12429-58-2]
Yttrium diboride
B_2Y M 110.5
12-Coordinate hexagonal prismatic Y. Isostructural with AlB_2. Synth. from Y + B at 1000-1300° *in vacuo*. Grey cryst. Mp 2100°, Mp 1947°. Of low chemical stability. Dec. by aq. HCl.

Yttrium boride ***(YB_4)*** [12045-95-3]
Yttrium tetraboride
B_4Y M 132.1
Isostructural with UB_4. Synth. from Y_2O_3 + B at 1900° *in vacuo*. Gold metallic cryst. Insol. v. dil. HCl, but dec. by conc. HCl. Mp 2610° (2800°). Oxidises in air >760°.

Yttrium boride ***(YB_6)*** [12008-32-1]
Yttrium hexaboride
B_6Y M 153.7
Isostructural with CaB_6 composed of Y^{+9} cations and B_6 octahedra. Synth. from Y_2O_3 + B. Blue solid. Insol. v. dil. HCl. Dissolves in hot HNO_3. Mp 2600° (2300°) dec. Metallic conductor. Dec. on heating *in vacuo* above ~1500° to YB_4 + B. Chemically v. inert. Type II superconductor below 7.1K.

Yttrium boride ***(YB_{12}), 9CI, 8CI*** [12046-90-1]
Yttrium dodecaboride
$B_{12}Y$ M 218.6
Has the UB_{12}-type struct. Synth. from Y_2O_3 + B at 1500-1700°. Mp 2200° dec. Resistant to HCl or H_2SO_4, dec. by oxidising acids (cold HNO_3 or aqua regia).

Yttrium boride ***(YB_{66})*** [12280-05-6]
$B_{66}Y$ M 802.4
Complicated struct.; each unit cell has 24Y, 1548B, mainly in 13-icosahedral units. Y—B 269.1-276.8 pm. Synth. from YB_4 + B. Monochromator for soft x-ray synchotron radn. V. hard white solid (pink cast). Mp 2100°. Similar compds. formed by Nd—Lu. Stable, attacked by conc. HNO_3.

IC-000942

Ytterbium borides

Ytterbium boride ***(YbB_4), 9CI, 8CI*** [12007-85-1]
Ytterbium tetraboride
B_4Yb M 216.2
Not obt. pure. Tetragonal UB_4-like struct. Synth. from Yb_2O_3 + B + C at 1500-1800°.

Ytterbium boride ***(YbB_6), 9CI, 8CI*** [12008-33-2]
Ytterbium hexaboride
B_6Yb M 237.9
Has the cubic CaB_6-like struct. with Yb(*II*) oxidation state. Synth. from Yb_2O_3 + B at 1500-1800° or Yb_2O_3 + B_2O_3 + Mg at 1200°. Blue solid. Mp 2370°. Stable to hot aq. HCl (1:2); sol. HNO_3 (1:10) at r.t. Dissolves in H_2O at 300° under pressure. Oxid. in air at *ca.* 750°.

Ytterbium boride ***(YbB_{12}), 9CI, 8CI*** [12008-81-0]
Ytterbium dodecaboride
$B_{12}Yb$ M 302.7
Has the cubic UB_{12}-type struct. Synth. from Yb_2O_3 + B, or Yb + B at 1400-1500°. Hexagonal platelets. Resistant to HCl or H_2SO_4, but attacked by oxidising acids (cold HNO_3, aqua regia).

Ytterbium boride ***(YbB_{66}), 9CI*** [37322-43-3]
$B_{66}Yb$ M 886.5
Struct. contains B_{12} icosahedron surrounded by 12 B_{12}-linked icosahedra. Unit cell contains 1584 B atoms and 24 Yb atoms. Synth. from elements. Mp *ca.* 2150°. V. hard and refractory.

B_2CaO_4 IC-000957

Calcium metaborate (CaB_2O_4)

Calcium diborate. Boric acid (HBO_2), calcium salt, 8Cl. Calcium borate (CaB_2O_4)

[13701-64-9]

CaB_2O_4

M 125.6

One of several borates ($Ca_3B_2O_6$, $Ca_2B_2O_5$, CaB_2O_4, CaB_4O_7) formed in the $CaO—B_2O_3$ system. There are 4 polymorphs containing respectively: chains of $[BO_2]^{\ominus}$, chains of $[B_2O_4]^{2\ominus}$, a network of $[B_3O_6]^{3\ominus}$, a network of $[B_6O_{12}]^{6\ominus}$. Synth. by heating an equimolar mixture of CaO and B_2O_3 to 1200°. Colourless cryst. Mp 1162°, ΔH_f° −2192.4 kJ mol^{-1}; ΔG_f° −2084.9 kJ mol^{-1}; S° 361.1 J K^{-1} mol^{-1}.

Mineral-form

Calciborite

Struct. contains chains of $[B_2O_4]^{2\ominus}$ anions. From Ural mountains, USSR. White cryst.

Bis(tetrafluoroborate)cadmium

[14486-19-2]

$$Cd(BF_4)_2$$

M 286.0

Obt. as solvates. Catalyst for polym. of epoxides and cross-linking; used in fluxes; battery electrode; hydrofluorination catalyst.

▷ EV0525000.

Hexahydrate: [27860-84-0]. *Hexaaquacadmium(2+) bis(tetrafluoroborate)*

From $CdCO_3$ and aq. HBF_4. Hygroscopic needles. V. sol. H_2O. Dehydration and dec. occur at 87-117°.

Heptahydrate: V. hygroscopic needles. V. sol. H_2O; spar. sol. Et_2O, EtOH.

B_2CdH_8 IC-000960

Cadmium borohydride

Cadmium tetrahydridoborate. Bis[tetrahydroborato(1−)] cadmium

[43793-43-7]

$$Cd(BH_4)_2$$

M 142.0

Isolated solvates have greater thermal stability. Synth. from $CdCl_2$ and $NaBH_4$ in DMF. Reducing agent. Solid. Slow dec. in Et_2O at r.t. to Cd.

▷ Reacts violently with H_2O.

Hexaammine complex: Hexaamminecadmium bis(tetrahydroborate)

Solid.

Tris(pyridine) complex: Solid. Mp 75-76° dec.

THF complex: [37080-45-8].

Tetrakis-THF complex. Cryst. (THF at −10°). Mp 66°. Loses 3 THF at high vacuum. Dec. at 73-74°.

B_2CuF_8 IC-000969

Copper(*II*) tetrafluoroborate

Cupric fluoborate

[38465-60-0]

$$Cu(BF_4)_2$$

M 237.1

Prepd. from CuO or $CuCO_3$ + aq. HBF_4. Commercially available. Deliquescent, blue cryst. + $6H_2O$. Sol. H_2O, EtOH.

[16455-64-8]

Funk, H. *et al, Z. Anorg. Allg. Chem.*, 1926, **155**, 121 (*synth*)
West, C.D. *et al, Z. Kristallogr.*, 1935, **91**, 480 (*cryst struct*)

$B_2CuH_4O_6$ IC-000970

Copper metaborate dihydrate

[18851-84-8]

$$CuO.B_2O_3.2H_2O$$

M 185.1

Struct. unknown. Fungicide for wood and other cellulose based materials. Blue solid.

Svarcs, E. *et al, CA*, 1968, **68**, 6988 (*synth, thermal anal*)

B_2CuO_4 IC-000971

Copper(*II*) metaborate

Copper triborate ($Cu_3(B_3O_6)_2$)

[10290-09-2]

$$CuO.B_2O_3$$

M 149.1

Can be formulated as $[Cu_3(B_3O_6)_2]_n$. Borate anion is a 3D polymer based on 6-membered B_3O_3 rings cross-linked by addnl. bridging O. Oil pigment. Dark blue solid. Mp ~1060°.

'Trimer':

$B_6Cu_3O_{16}$ M 543.4

Martinez-Ripoli, M. *et al, Acta Crystallogr., Sect. B*, 1971, **27**, 677 (*cryst struct*)

B_2F_8Mn IC-000978

Manganese(*II*) tetrafluoroborate
[30744-82-2]

$Mn(BF_4)_2$

M 228.5
7-Coord. monocapped trigonal prism with one BF_4 group bridging 4 Mn atoms and one BF_4 group bridging 3 Mn atoms. Synth. from Mn powder and anhyd. HF in a rotating autoclave for 7 h. at 100-120° followed by addition of BF_3 under pressure. The mixture is then left for 31.5 h at 23°. Catalyses the alkylation of aromatic compds. with alkenes and the isom. of butane. Pink-white powder. ΔH_f −54.3 kJ mol^{-1}.
Tetrahydrate: Prepared by thermal dec. of the hexahydrate at 65-150°.
Hexahydrate: [15036-91-6]. *Hexaaquamanganese(II) tetrafluoroborate*
$B_2F_8H_{12}MnO_6$ M 336.6
Synth. from $MnCO_3$ + aq. HBF_4. Hexagonal cryst. (H_2O). Sl. sol. EtOH.
Tetrakis-MeCN complex: Synth. by treating a suspension of $NOBF_4$ in MeCN with Mn. Dec. with loss of MeCN and dec. of $BF_4^{\ominus}$ on heating.
Hexakis(MeCN) complex: Synth. from $MnBr_2$ and $AgBF_4$ in dry MeCN. Colourless cryst. (MeCN).

$B_2H_7^{\ominus}$

μ-Hydrohexahydrodiborate(1−), 10CI

Heptahydrodiborate(1−)

[27380-11-6]

$[H_3B—H—BH_3]^{\ominus}$

M 28.6 (ion)

Proposed to have single B—H—B bridge. Synth. from $BH_4^{\ominus}$ + B_2H_6 in CH_2Cl_2.

Tetrabutylammonium salt: [40001-25-0].
White air-sensitive cryst. Sol. CH_2Cl_2, $CHCl_3$, C_6H_6, THF.

Ph_3MeP salt: [40001-24-9].
White air-sensitive cryst. Sol. CH_2Cl_2, $CHCl_3$.

Evans, W.G. *et al, Inorg. Chem.*, 1968, **7**, 1746 (*synth*)
Inorg. Synth., 1977, **17**, 21 (*synth, pmr, B-11 nmr*)

IC-000993

$B_2H_7S^{\ominus}$

Hexahydro-μ-mercaptodiborate(1−), 8CI

$[HS(BH_3)_2]^{\ominus}$

M 60.7 (ion)

Et_4N salt: [22534-32-3].
Not isol. Sol. liq. H_2S.

Keller, P.C., *Inorg. Chem.*, 1969, **8**, 1695 (*synth, B-11 nmr*)

IC-000994

B_2H_8Mn

Manganese(*II*) borohydride

Bis(tetrahydroborato)manganese(II). Manganese(II) tetrahydroborate

$Mn(BH_4)_2$

M 84.6

Struct. not known. Synth. from $Mn(OMe)_2$ and B_2H_6 in THF or $LiBH_4$ and $MnCl_2$in dry Et_2O. Colourless compd., air-stable. Sol. Et_2O. Hydrol. slowly in H_2O but rapidly in presence of $H^{\oplus}$. Forms various THF complexes.

Monnier, G., *Ann. Chim. (Paris)*, 1957, **2**, 14 (*synth*)

Gmelin Handbook Inorg. Chem., Syst. No. 56, 1981, **C7**, 61 (*rev, bibl*)

IC-000995

$B_2H_8P^{\ominus}$

Hexahydro-μ-phosphidodiborate(1−), 8CI

$[H_2P(BH_3)_2]^{\ominus}$

M 60.6 (ion)

Li salt: [28961-07-1].
B_2H_8LiP M 67.6
Colourless cryst. Sol. Et_2O, H_2O. Little dec. after several hrs. in aq. soln.

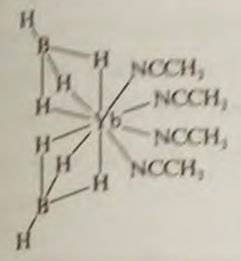
Meyer, E., *Angew. Chem., Int. Ed. Engl.*, 1971, **10**, 416 (*synth, pmr*)
Meyer, E., *Inorg. Chem.*, 1971, **10**, 2259 (*synth, ir, pmr*)

IC-000996

B_2H_8Yb

Ytterbium(*II*) borohydride

Bis(tetrahydroborato)ytterbium(II)



Tetrakis-MeCN complex

M 202.7

Eu analogue also synth.

Tetrakis-MeCN complex: [133931-87-0].
Tetrakis(acetonitrile)bis[tetrahydroborato(1−)-H,H',H'']ytterbium
$C_8H_{20}B_2N_4Yb$ M 366.9
Orange cryst. Loses 2MeCN on washing and vacuum drying; affords YbB_4 on thermal dec. at 350-400°.
Tetrakis-Py complex: [133931-89-2].
$C_{28}H_{28}B_2N_4Yb$ M 519.1
Violet cryst. + 2Py. Loses Py on washing and drying.

White, J.P. *et al, Inorg. Chem.*, 1991, **30**, 2337 (*synth, adducts, cryst struct, nmr, ir*)

IC-000997

B_2H_8Zn

Zinc tetrahydroborate ($Zn(BH_4)_2$)

Bis[tetrahydroborato(1−)]zinc. Zinc borohydride

[17611-70-0]

$Zn(BH_4)_2$

M 95.0

Obt. as Et_2O complex. Dec. at *ca.* 80°.

Mono-Et_2O complex: Synth. from MBH_4 (M = Li, Na, K) and $ZnCl_2$ in Et_2O. Selective reducing agent. Cryst. (Et_2O at −78°); removal of Et_2O leads to dec. Mp 135°.
Tetraammine complex: Tetraamminezinc(2+) bis(tetrahydridoborate)
$B_2H_{20}N_4Zn$ M 163.1
White air-stable cryst. Insol. Et_2O; dissoc. in H_2O without H_2 evolution.

Wiberg, E. *et al, Z. Naturforsch., B*, 1952, **7**, 579 (*struct*)
Nöth, H. *et al, Z. Anorg. Allg. Chem.*, 1969, **370**, 209 (*ir*)

B_2I_4

Tetraiododiborane(4), 11CI, 10CI

Boron iodide (B_2I_4). Diboron tetraiodide

[13703-80-5]

$I_2B—BI_2$

M 529.2

Pale yellow solid, dec. >100°. Sol. toluene, cyclohexane. Mp 94-95°.

Haubold, W. *et al, Z. Anorg. Allg. Chem.*, 1983, **507**, 231 (*synth, ir, ms, B-11 nmr*)
Briggs, A.G. *et al, Polyhedron*, 1984, **3**, 369 (*synth*)

B_2MnS_4 IC-001002

Manganese boron sulfide (MnB_2S_4), 9CI

[50810-56-5]

MnB_2S_4

M 204.8

Orthorhombic. Prepared from the elements in an evacuated quartz tube at 1200° for 2-4 weeks. Used as a cathode in non-aq. cells with Li anode. Yellow cryst. (by subl. at 1000°).

Thomas, D. *et al*, *Bull. Soc. Chim. Fr.*, 1963, 1131 (*synth*)

$B_2Mn_2O_5$ IC-001003

Manganese borate ($Mn_2B_2O_5$)

$Mn_2B_2O_5$

M 211.4

Prepd. by fusing boric acid and MnO in a Pt crucible under N_2. Orange transparent cryst. Paramagnetic-antiferromagnetic transition occurs at low temp. μ_{eff} = 5.88μ_B.

Triclinic-form

Struct. consists of $[B_2O_5]^{4\ominus}$ anions and $Mn^{2\oplus}$ cations. Cryst. (from melt). Isomorphous with $Mg_2B_2O_5$, $Fe_2B_2O_5$ and $Co_2B_2O_5$.

Monoclinic-form

Cryst. (from melt).

Monohydrate:

$B_2H_2Mn_2O_6$ M 229.5

Prepd. hydrothermally from aq. $Mn(OAc)_2$ and borax. Monoclinic struct. of composition $Mn_2(OH)[B_2O_4(OH)]$.

Mineral-form [15915-21-6]

Sussexite

$BHMnO_3$ M 114.7

Mineral identical with the monohydrate, but also sometimes formulated as $MnBO_2(OH)$. Occurs in hydrothermal veinlets at sites in USA, Switzerland and Japan. White, pinkish or straw-yellow fibrous cryst.

$B_2Mn_3O_6$ IC-001004

Manganese(*II*) borate ($Mn_3(BO_3)_2$)

$Mn_3(BO_3)_2$

M 282.4

Orthorhombic, isomorphous with $Mg_3(BO_3)_2$. Struct. consists of distorted hcp O atoms with Mn in octahedral holes. BO_3 groups cause deviation from hcp. Synth. from $MnCO_3$ and B_2O_3 (3:1 molar ratio) with a small amount of KHF_2 flux at 700° for 30 min, or by fusing MnO and boric acid in a Pt crucible under N_2. Tan cryst. μ_{eff} = 6.18μ_B.

Mineral-form [16677-55-7]

Jimboite

Manganese analogue of Kotoite. Occurs in Japan, in assoc. with carbonate ores. Light purple-brown vitreous cryst.

B_2NTi IC-001007

Titanium boride nitride (TiB_2N), 11CI

[52932-04-4]

TiB_2N

M 83.5

The composition is v. variable. Has fcc struct. Synth. from Ti and BN at high temp. and pressure or by chemical vapour deposition on TiN. Hard. Used as a coating on cutting tools.

[52036-95-0]

Wong, A.K. *et al*, *CA*, 1967, **66**, 86958r (*synth, use*)
Lebugle, A. *et al*, *J. Less-Common Met.*, 1981, **82**, 269 (*synth, uv-vis*)

$B_2Ni_3O_6$ IC-001008

Nickel borate ($Ni_3(BO_3)_2$)

[13850-30-7]

$Ni_3(BO_3)_2$

M 293.8

Octahedrally coord. nickel in 3-D polymeric struct. Prismatic green cryst. Insol. H_2O, acids. Isomorphous with Mn, Co analogues.

[14455-31-8]

Guyard, M.C., *Compt. Rend. Hebd. Seances Acad. Sci.*, 1900, **130**, 335 (*synth*)

B_2O IC-001009

Boron oxide (B_2O)

Boron suboxide

[12045-60-2]

B_2O

M 37.6

Two forms have been prepd., one with a graphite-like structure and one with a diamond-like structure.

Graphite-like-form

Formed by reducing B_2O_3 with B at ~ 6 × 10^4 atm. and 1200-1800°. Light reddish-brown solid.

Diamond-like-form

Prepd. from BP + O_2 at ~ 4 × 10^4 atm. Black-brown opaque cryst. Unreactive. V. hard. Semiconducting at 150-300K.

Hall, H.T. *et al*, *Inorg. Chem.*, 1965, **4**, 1213 (*synth, graphite-form*)
Endo, T. *et al*, *J. Mater. Sci. Lett.*, 1987, **6**, 683 (*synth, diamond-form*)

B_2O_2 IC-001010

Boron oxide (B_2O_2), 11CI, 10CI, 9CI, 8CI

Boron suboxide. Diboron dioxide

[13766-28-4]

O=B—B=O

M 53.6

Known in gas phase at high temps.

Sommer, A. *et al*, *J. Chem. Phys.*, 1963, **38**, 87 (*synth, ir*)
Demenent'ev, A.I. *et al*, *J. Struct. Chem. USSR (Engl. Transl.)*, 1983, **24**, 252 (*synth, ir*)

B_2O_3 IC-001011

Boron oxide (B_2O_3), 11CI, 10CI, 9CI, 8CI

Diboron trioxide. Boric oxide

[1303-86-2]

B_2O_3

M 69.6

The common oxide of boron. Major use in glass manuf., also used in fibreglass, plastics and as catalyst in org. reactions and feedstock for other B compds. Commercially available. Strong Lewis acid, two crystalline forms. Hygroscopic at r.t. Bp 2250° (extrap.). ▶ RD7900000.

Hexagonal-form

Phase I. Common-form

Struct. comprises 3D network of O-bridging BO_3 groups. Used in glass technology, acid catalyst. Colourless cryst. Mp 455-475°, d 2.56 g cm^{-3}.

Orthorhombic-form

Phase II. Dense-form

Struct. comprises irregularly interconnected BO_4 tetrahedra. Obt. at 3.5 × 10^8 atm. and 525°. Mp 525-550°, d 3.11 g cm^{-3}.

Vitreous-form

Struct. prob. comprises a network of partially ordered trigonal BO_3 units with 6-membered $(BO)_3$ rings. When fused, dissolves metal oxides → coloured borate glasses. d 1.83 g cm^{-3}.

$B_2O_4^{2\ominus}$ IC-001012

Diborate(2−)

$[O_2B—O—BO]_n^{2n\ominus}$

M 85.6 (ion)

Polyanion: one B atom is tetrahedral, one is trigonal planar by coordination from other $B_2O_4^{2\ominus}$ ions.

Ca salt: see *Calcium metaborate* (CaB_2O_4), *IC-000957*
Di-Ag(I) salt: Silver diborate ($Ag_2B_2O_4$)
Colourless cryst.

Shashkin, D.P. *et al*, *Dokl. Akad. Nauk SSSR, Ser. Khim.*, 1970, **195**, 345 (*synth*)
Gmelin Handbook Inorg. Chem., Syst. No. 13, *2nd Suppl.*, 1980, **1**, 224 (*synth*)

B_2O_4Pb IC-001013

Lead metaborate ($Pb(BO_2)_2$)

Lead borate

[14720-53-7]

$Pb(BO_2)_2$

M 292.8

Used in varnishes and paints. White crystalline powder + H_2O. Insol. H_2O, alkali, sol. acid. Loses H_2O at 160°.

[10214-39-8]

Boiko, V.F. *et al*, *Izv. Vyssh. Uchebn. Zaved., Khim. Khim. Tekhnol.*, 1976, **19**, 1634, 1799.

$B_2O_8Zr^{6\ominus}$

Bis[orthoborato(3−)-*O*]dioxozirconate(*IV*)(6−), 11Cl

$[ZrO_2(BO_3)_2]^{6\ominus}$

M 240.8 (ion)

Tri-Mg salt: [98047-56-4]. *Magnesium zirconium borate oxide* ($Mg_3Zr(BO_3)_2O_2$)
$B_2Mg_3O_8Zr$ M 313.7
Synth. from MgO, ZrO_2 and H_3BO_3. White solid. Possesses ludwigite struct.

Konijnendijk, W.L. *et al, Mater. Chem. Phys.*, 1985, **12**, 591 (*synth, struct, luminescence*)

IC-001015

$B_2O_{10}Ti^{10\ominus}$

Bis[orthoborato(3−)-*O*]tetraoxotitanate(*IV*)(10−), 11Cl

$[TiO_4(BO_3)_2]^{10\ominus}$

M 229.4 (ion)

Penta-Mg salt: [98047-55-3]. *Magnesium titanium borate oxide* ($Mg_5Ti(BO_3)_2O_4$)
$B_2Mg_5O_{10}Ti$ M 351.0
V. efficient luminescent material. Ludwigite-like struct.

Konijnendijk, W.L. *et al, Mater. Chem. Phys.*, 1985, **12**, 591 (*synth, luminescence*)

IC-001016

B_2S_3

Boron sulfide (B_2S_3), 9Cl

[12007-33-9]

B_2S_3

M 117.8
Layer struct. composed of planar B_2S_3 6-membered rings and B_2S_2 4-membered rings linked by S bridges, B—S 181pm. Prepd. by reaction of B with H_2S or with FeS. Also by a thermal dec. of thiometaboric acid. Pale yellow solid, often glassy. Dec. in moist air. Mp 310°.
▷ Reacts violently with H_2O.

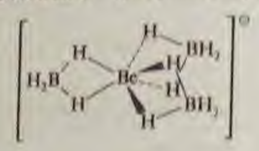
IC-001018

$B_3BeH_{12}^{\ominus}$

Tris[tetrahydroborato(1−)]beryllate(1−)



M 53.5 (ion)
Proposed trigonal prismatic struct. shown.
Me_4N salt: [64933-62-6].
Synth. from $[Me_4N]BH_4$ + $Be(BH_4)_2$ for 20h at 25°. Finely divided white solid.

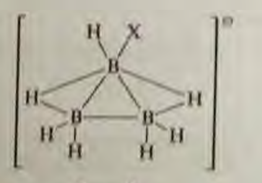
Bond, A.C. *et al, J. Am. Chem. Soc.*, 1977, **99**, 6906 (*synth, raman*)

IC-001019

$B_3BrH_7^{\ominus}$

1-Bromoheptahydrotriborate(1−), 11Cl

[94986-45-5]



X = Br

M 119.3 (ion)
Synth. from $[B_3H_8]^{\ominus}$ and Hg_2Br_2.
Tetrabutylammonium salt: [57472-92-1].
Synth. from $(Bu_4N)B_3H_8$ and HBr in CH_2Cl_2 under reduced pressure. White cryst. Dec. on heating.

[57405-81-9]

Ryschkewitsch, G.E. *et al, J. Am. Chem. Soc.*, 1975, **97**, 6258 (*synth, ir*)

IC-001021

$B_3CaH_4O_8$

Dicalcium hexaborate pentahydrate

Boric acid ($H_3B_3O_3$) calcium salt (1:1) monohydrate, 8Cl

[12291-65-5]

$[Ca[B_3O_3(OH)_3].H_2O]_n$

M 205.5
Contains polymeric anion as in Hydroboracite, IC-001142. Also formulated as $2CaO.3B_2O_3.5H_2O$. Used in production of boric acid and borax. Shows interesting ferroelectric, pyroelectric and optical props. Fertiliser, fireproofing agent. Component of steel refining fluxes. Colourless monoclinic cryst. Spar. sol. H_2O; dissolves slowly in mineral acids. Dec. on heating with H_2O loss; a succession of unstable complex solid phase products are formed leading to CaB_2O_4.
▷ Explosive dehydration reaction occurs at 375°.

Mineral-form [1318-33-8]
Colemanite, 11Cl, 10Cl, 9Cl
Several formulations have been used including: $B_6H_{10}O_{11}.2Ca.5H_2O$, $B_3H_5O_7.Ca.H_2O$, $B_3H_3O_6.\frac{1}{2}Ca.H_2O$, $BHO_3.\frac{1}{4}Ca.\frac{1}{4}H_2O$, $B_2H_4O_5.2Ca.5H_2O$. Occurs in saline deposits in arid regions. Obtainable from inyoite by heating to 100°. Colourless, white or yellowish translucent cryst.

$Gd(BH_4)_3$

M 201.7
Obtd. as THF complex.
Tris-THF complex:
$C_{12}H_{36}B_3GdO_3$ M 418.0

$B_3H_2Na_3O_7 - B_3H_6N_3$

Air- and moisture-sensitive colourless cryst. Isomorphous with Y analogue, Yttrium(*III*) borohydride, IC-001061

Bernstein, E.R. *et al*, *Chem. Phys.*, 1975, **10**, 215 (*synth*)
Segal, B.G. *et al*, *Inorg. Chem.*, 1978, **17**, 844 (*cryst struct*)

IC-001040

$B_3H_2Na_3O_7$

Sodium metaborate hemihydrate

Trisodium triborate

[56831-57-9]

$NaBO_2.\frac{1}{2}H_2O$ (struct. unknown)

M 215.4

It has been suggested that this compd. is $Na_2[B_3O_3(OH)_4]$.

Colourless orthorhombic cryst.

Nies, N.P. *et al*, *J. Chem. Eng. Data*, 1967, **12**, 303 (*synth*)
Tolstikova, P. *et al*, *Compt. Rend. Hebd. Seances Acad. Sci. Sect. C*, 1970, **271**, 1577 (*thermal anal*)

IC-001041

$B_3H_3S_3$

Thioboric acid ($H_3B_3S_3$), 10Cl, 9Cl, 8Cl

Monothioboric acid. Thioborazine. 2,4,6-Trimercapto-cyclo-1,3,5-triaza-2,4,6-triborine. Trimercaptoborazine

[13703-87-4]

M 177.9

Colourless cryst. (CS_2). Sol. CS_2, C_6H_6, CCl_4, $CHCl_3$. Mp 160° dec.

S,S',S''-Trimethyl 2,4,6-*Trimercaptoborazine*

$C_6H_9B_3S_3$ M 266.4

Tri-Na salt [23361-58-2]

B_3NaS_3 M 201.7

Synth. as tri-K salt with Na_2S. V. moisture-sensitive, highly unstable. Mp 580°. Isostructural with corresp. morpholide.

Tri-K salt [23361-56-0]

B_3KS_3 M 342.1

Synth. from B,S, and K,S in a sealed tube at 700° or action of H_2S in an excess of N_2 on K,S and B at 750°. V. moisture-sensitive highly unstable. Mp 530° Isostructural with corresp. morpholide.

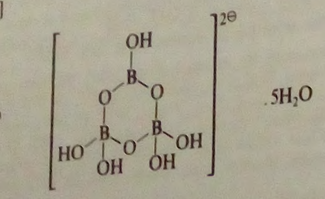
$B_3H_{15}MgO_{13}$ IC-001064

Magnesium triborate pentahydrate

[1318-70-3]



M 279.8

Can also be formulated $2MgO.3B_2O_3.15H_2O$.

Mineral-form [12260-26-3]

Inderite

Occurs in large quantities in Open Pit at Boron and other borate mining areas in California. Also found in USSR and Turkey. Colourless cryst., aggregates white to pink. This 2:3:15 compd. dec. thermally to give 2:3:1, 1:2:9, and 1:1:3 compds.

$B_3K_3O_6$ IC-001065

Potassium triborate ($K_3B_3O_6$)

Potassium metaborate. Boric acid (HBO_2) potassium salt, 8CI

[13709-94-9]

$K_3B_3O_6$

M 245.7

Struct. comprises $K^{\oplus}$ cations and cyclic $B_3O_6^{3\ominus}$ anions. Synth. by melting together KO_2 and B_2O_3 in molar ratio (2:1). Used in photographic bleaching solns. Colourless hexagonal cryst. Sol. H_2O. Mp 947°. ΔH_f° −996 kJ mol^{-1}; ΔG_f° −937 kJ mol^{-1}; S° 80 J K^{-1} mol^{-1}.

'Monomer': Potassium metaborate (KBO_2)
BKO_2 M 81.9

$B_2H_6Na_2O_{11}$ IC-001082

Disodium tetraborate tetrahydrate

[12045-87-3]

$Na_2[B_4O_5(OH)_2].3H_2O$

M 273.2

Struct. contains parallel infinite chains of $[B_4O_5(OH)_2]_n^{2n\ominus}$ anions - two B atoms are 4-coordinate and two are 3-coordinate in the B_4 structural unit. Also formulated as $Na_2O.2B_2O_3.4H_2O$. Manuf. directly from the mineral. Used in prodn. of sodium perborate, a bleaching agent in washing powders. Used in manuf. of glass fibre, cellular insulation, borosilicate glasses and enamels. Colourless monoclinic cryst. Sol. hot H_2O. ΔH_f° −4481.9 kJ mol^{-1}. Dec. on heating: $-2H_2O$ at 60°, $-4H_2O$ at 320°.

Mineral-form [12447-37-9]
Kernite, 9CI
Occurs in e.g. Argentina. Colourless transparent cryst., tarnishes to white owing to surface formation of tincalconite.

[12267-20-0]

$B_2H_{10}Hf$ IC-001087

Hafnium(*IV*) borohydride
Tetrakis(tetrahydroborato(1−)-H,H′H″)hafnium, 11Cl
[55608-70-1]

M 237.8
Molecular with strict T_d symmetry. Synth. by reaction of $HfCl_4$ and $LiBH_4$ in Et_2O and purified by low temp. trap to trap distillation. Colourless, v. moisture sensitive solid. A form in which two H bridge to the Hf based on vibrational spectra is probably the same compd.

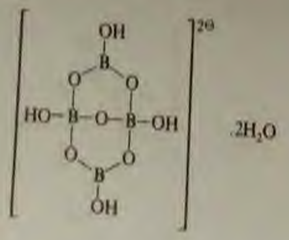
$B_4H_{16}N_2O_{11}$ IC-001088

Diammonium tetraborate tetrahydrate
[10135-84-9]



M 263.3
Used as borate source when alkali metal ions are specifically not required. Used in manuf. of urea-formaldehyde foams, fire retardants and in electrochemistry. Colourless cryst; quite unstable at r.t., evolves NH_3. Sol. H_2O.

Toledano, P. *et al, Bull. Soc. Chim. Fr.*, 1966, 1933; 1969, 1462 (*synth*)

$B_4H_{16}Np$ IC-001089

Neptunium(*IV*) borohydride
Tetrakis(tetrahydroborato)neptunium
[66615-98-3]

$Np(BH_4)_4$

M 296.4
12-Coordinate, monomeric. Most volatile Np(*IV*) compd. known. Dark green liq. Mp 14.2°. V. volatile, V.p. 10mm Hg at 25°. Isostructural with Plutonium(*IV*) borohydride, IC-001091 (not $U(BH_4)_4$) and similar to Zr, Hf analogues.
▷ Pyrophoric.

$B_2H_{10}Ti^{\odot}$ IC-001093

Tetrakis(tetrahydroborato)titanate(*III*)(1−)
Tetrakis(tetrahydroborato(1−)-H,H′)bis[tetrahydroborato(1−)-H,H′]titanate(1−), 11Cl. Tetrakis(borohydrido) titanate(III)(1−)

$[Ti(BH_4)_4]^{\odot}$

M 107.2 (ion)
Detailed struct. is not known.
Tris[(1,2-dimethoxyethane)sodium] salt: [101307-98-6].
Synth. from $TiCl_4$ and $NaBH_4$ in dimethoxyethane.

Borisov, A.P. *et al, Russ. J. Inorg. Chem.* (*Engl. Transl.*), 1986, **31**, 47 (*synth, ir*)

$B_2H_{10}U$ IC-001094

Uranium borohydride
Tetrakis(tetrahydroborato)uranium, 10Cl
[18903-76-3]

$U(BH_4)_4$

M 297.3
Uranium is 14-coordinate. Exists in two cryst. forms. Yellow-green cryst. or emerald-green cryst. Sol. heptane, C_6H_6. Dissolves in ethers (Et_2O, THF) forming adducts. Air- and moisture-sensitive. Stable below 70°. Highly volatile.

Me_2O complex: [65150-32-5].
$C_3H_{12}B_4OU$ M 343.4
Air- and moisture-sensitive cryst. Sol. Me_2O. Mp 93°. Subl. 20° *in vacuo*.
▷ Inflames in contact with water.

Et_2O complex: [65150-21-2].
$C_4H_{20}B_4OU$ M 381.6
Air- and moisture-sensitive green cryst. Sol. Et_2O. Mp 66°. Subl. 20° *in vacuo*.
▷ Inflames in contact with water, sometimes explosively.

Bis-THF complex: [65167-99-9].
$C_8H_{28}B_4O_2U$ M 441.6
Air- and moisture-sensitive pale-green cryst. Sol. THF. Mp 122° dec. Subl. 50-60° *in vacuo*.
▷ Inflames in contact with water.

Dipropyl ether complex: [65150-34-7].
$C_6H_{30}B_4OU$ M 367.1
Air- and moisture-sensitive light-green solid. Sol. dipropyl ether. Mp 62-63°. Subl.$_{0.0001}$ 30-40°. Dimeric.

1,2-Dimethoxyethane complex:
$C_4H_{28}B_4O_2U$ M 387.5
Green cryst. Sol. toluene.

Bis-HMPA complex:
$C_{20}H_{52}B_4N_6O_2P_2U$ M 637.6
Pale-green microcryst. Sol. toluene.

Bis-Ph_3PO complex:
$C_{56}H_{48}B_4O_2P_2U$ M 853.9
Pale-green microcryst. Sol. CH_2Cl_2.

$B_4H_{16}Zr$ IC-001096

Tetrakis[tetrahydroborato(1−)-*H,H′,H″*]zirconium(*IV*), 11Cl
Zirconium(IV) *borohydride. Tetrakis(borohydrido) zirconium*(IV). *Zirconium tetrakis(tetrahydroborate)*
[12370-59-1]

$Zr(BH_4)_4$

M 150.5
Tetrahedral molecule. Synth. from a slurry of $ZrBr_4$ and $LiBH_4$ in ether or by milling solid $ZrCl_4$ and $NaBH_4$. Used in ethylene polym. catalysts and to form ZrB_2 coatings on nuclear fuel elements. Air, moisture and light-sensitive colourless low-melting solid. Mp 28.7°. Bp 123° (extrap.). Thermal dec. yields ZrB_2.

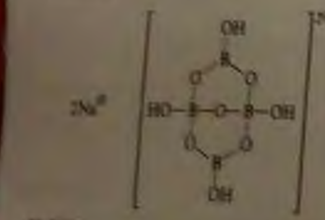
$B_4H_{20}Na_2O_{17}$ IC-001098

Borax, 11Cl, 10Cl, 9Cl, 8Cl

Tincal. Disodium tetraborate decahydrate. Borax decahydrate. Sodium borate

[1303-96-4]



M 381.3

The most important commercial borate. Also formulated as $Na_2O.2B_2O_3.10H_2O$. Feedstock for borate-based detergents, agrochemicals, fire retardants, photographic chemicals, textile finishes and glasses. Colourless monoclinic cryst. Sol. H_2O (2 g per 100 cm^3 at 0°, 170 g per 100 cm^3 at 100°) MeOH, polyols; spar. sol. Me_2CO, EtOAc, EtOH. Stable in aq. soln. up to 61° then dehydrates to Disodium tetraborate pentahydrate. IC-001086 - complex dehydration reactions depend somewhat on sample's history.

▷ VZ2275000

Mineral-form

Borax

Occurs as a deposit from hot springs and in evaporated saline lake and playa deposits. Widespread occurrence in California. Also found in Mexico, Argentina, Tibet, Iran, USSR and Turkey. Colourless or white to greyish, greenish or bluish cryst.

B_2MnO_7 IC-001104

Manganese tetraborate

Manganese(II) borate (MnB_4O_7), 11Cl

[12228-91-0]

MnB_4O_7

M 210.1

Orthorhombic. The B_4O_7 group consists of two tetrahedral BO_4 groups with a common O atom, each tetrahedron sharing two other O atoms with two BO_3 groups. $Mn^{2\oplus}$ occupies distorted tetrahedron of O atoms. Obt. by metathesis of aq. molar solns. of $MnSO_4$ and borax and washing the precipitate and drying at 500° for 4 h. Cryst. Mp 940°. ΔH_f° −75.3 kJ mol^{-1} (est.).

Nonahydrate: Synth. from $MnCl_2.4H_2O$ and $Na_2B_4O_7.10H_2O$ in H_2O. Light pink cryst. Structural composition is $Mn[B_4O_5(OH)_4].7H_2O$. Some studies have been done on a commercial product $MnB_4O_7.8H_2O$.

B_4NdRh_4 IC-001106

Neodymium rhodium boride ($NdRh_4B_4$), 10Cl

[62974-31-6]

$NdRh_4B_4$

M 599.1

Tetragonal phase is superconductor (T_c ~5.3K). Antiferromagnetic transitions occur at ~1.5 and ~1.0K (sat. μ_{sat} = 3.4μ_B).

Matthias, B.T. *et al*, *Proc. Natl. Acad. Sci. U.S.A.*, 1977, **74**, 1334 (*synth*)

IC-001107

B_4O_5

Boron oxide (B_4O_5)

Boron suboxide

B_4O_5

M 123.2

Prepd. by evaporating a soln. of $H_2B_4O_5$ (obtained by hydrolysis of Mg_3B_2) *in vacuo*. White residue. Dissolves in H_2O to give $H_2B_4O_5$.

[54566-73-3]

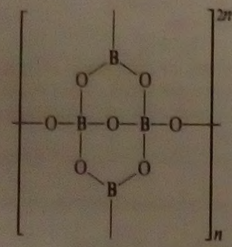
Ray, R.C. *et al*, *J. Chem. Soc.*, 1941, 742 (*synth*)

IC-001108

$B_4O_7^{2\ominus}$

Tetraborate(2−), 10CI, 9CI, 8CI

[12258-53-6]



M 155.2 (ion)

3D polyanion.

Di-Li salt: see *Lithium tetraborate, IC-001102*

Sr salt: [12007-66-8].

B_4O_7Sr M 242.8

Colourless cryst.

B_4PrRh_4

IC-001109

Praseodymium rhodium boride ($PrRh_4B_4$), 10CI

[63100-10-7]

$PrRh_4B_4$

M 595.7

Possesses the $CeCo_4B_4$ struct. Superconducting below ~ 4.6K. Ferromagnetic. $\mu_{eff} = 3.10\mu_B$ (θ −2.6K); peak in heat capacity at 1.6K; below this temp. antiferromagnetic superconductor.

Matthias, B.T. *et al*, *Proc. Natl. Acad. Sci. U.S.A.*, 1977, **74**, 1334 (*synth*)

B_4ReSm

IC-001110

Rhenium samarium boride ($ReSmB_4$)

[84285-79-0]

$ReSmB_4$

M 379.8

Isostructural with $YCrB_4$. From phase equilibrium at 1000°.

Mikhalenko, S.I. *et al*, *Poroshk. Metall. (Kiev)*, 1982, 50; *CA*, **98**, 112030q (*synth, cryst struct*)

B_4ReTb

IC-001111

Rhenium terbium boride ($ReTbB_4$)

[12670-66-5]

$ReTbB_4$

M 388.3

Isostructural with $YCrB_4$.

Kuz'ma, Yu.B. *et al*, *Dopov. Akad. Nauk Ukr. RSR, Ser. A: Fiz. Mat. Tekh. Nauki.*, 1972, **34**, 166; *CA*, **76**, 132557r.

B_4ReTh

IC-001112

Rhenium thorium boride ($ReThB_4$)

[54065-39-3]

$ThReB_4$

M 461.4

Layer struct. of the $ThMoB_4$ kind. Isol. from the Th—Re—B phase system at 1750°.

Rogl, P. *et al*, *Monatsh. Chem.*, 1974, **105**, 1082 (*synth, cryst struct*)

B_4Re_4Y

IC-001113

Rhenium yttrium boride (Re_4YB_4)

[62339-31-5]

Re_4YB_4

M 876.9

Isostructural with $CeRe_4B_4$. From Y—Re—B system at 1000°.

Mikhalenko, S.I. *et al*, *Poroshk. Metall. (Kiev)*, 1977, 48; *CA*, **86**, 128127q.

B_4Rh_4Sm

IC-001114

Rhodium samarium boride (Rh_4SmB_4)

Samarium rhodium boride ($SmRh_4B_4$)

[62974-33-8]

$SmRh_4B_4$

M 605.2

Tetragonal phase is superconductor at low temps. (T_c ~2.5K); both ferromagnetic and antiferromagnetic phases are superconducting. Antiferromagnetic ordering occurs at 0.87K.

Matthias, B.T. *et al*, *Proc. Natl. Acad. Sci. U.S.A.*, 1977, **74**, 1334 (*magnetism*)

Japan. Pat., 62 221 447, (1987); *CA*, **109**, 8388 (*use*)

IC-001116

B_4Rh_4Tm

Rhodium thulium boride (Rh_4TmB_4)

Thulium rhodium boride ($TmRh_4B_4$)

[62974-36-1]

$TmRh_4B_4$

M 623.8

Tetragonal phase is superconductor; T_c ~9.6K. Metamagnetic transition at 0.49K. Spec. heat anomalies occur above T_c.

Matthias, B.T. *et al*, *Proc. Natl. Acad. Sci. U.S.A.*, 1977, **74**, 1334 (*magnetism*)
Vandenberg, J.M. *et al*, *Proc. Natl. Acad. Sci. U.S.A.*, 1977, **74**, 1336 (*struct*)

King, R.B., *Inorg. Chim. Acta*, 1988, **143**, 15.

B_4Rh_4Y

IC-001117

Rhodium yttrium boride (Rh_4YB_4)

Yttrium rhodium boride (YRh_4B_4)

[62974-37-2]

YRh_4B_4

M 543.7

Struct. based on a primitive tetragonal lattice with Rh_4B_4 cubes and Y atoms alternating. ($CeCo_4B_4$ type). Tetragonal phase is high-temp. superconductor; T_c ~11K. Superconductivity found also on partial subst. of Ru for Rh.

Matthias, B.T. *et al*, *Proc. Natl. Acad. Sci. U.S.A.*, 1977, **74**, 1334 (*magnetism*)
Vandenberg, J.M. *et al*, *Proc. Natl. Acad. Sci. U.S.A.*, 1977, **74**, 1336 (*cryst struct*)

Lee, W.H. *et al*, *J. Low Temp. Phys.*, 1987, **68**, 147.
King, R.B., *J. Solid State Chem.*, 1987, **71**, 233.

B_4Rh_4Yb

IC-001118

Rhodium ytterbium boride (Rh_4YbB_4)

Ytterbium rhodium boride ($YbRh_4B_4$)

[66506-05-6]

$YbRh_4B_4$

M 627.9

Pure phase not isolable; can be stabilised by incorporation of 15% Ru. Not superconducting above 1.5K.

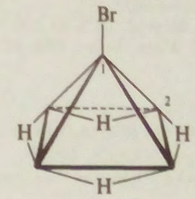
Johnston, D.C., *Solid State Commun.*, 1977, **24**, 699.
Delong, L.E. *et al*, *Ternary Supercond., Proc. Int. Conf., 1980*, Shenay, G.K. *et al*, Eds., Elsevier, 1981, 193.

B_5BrH_8

IC-001119

1-Bromopentaborane(9), 10CI

[23753-67-5]



M 142.0

nido-. Reactive compd. used for synthesis of other boranes. White solid. Mp 34°. Bp_{34} 82°.

▷ Spontaneously inflammable. Explosive with air.

Tucker, P. *et al*, *Inorg. Chem.*, 1970, **9**, 1430 (*nmr*)
Inorg. Synth., 1979, **19**, 247 (*synth, haz*)

$B_5CaH_{10}NaO_{14}$

IC-001120

Calcium sodium pentaborate pentahydrate

[12229-14-0]

$NaCa[B_5O_7(OH)_4].3H_2O$

M 351.1

Contains pentaborate chain polyanions (*cf.* Pentaborate(1−), IC-001126) linked through B—O—B bridges. Also formulated as $Na_2O.2CaO.5B_2O_3.10H_2O$. Used in production of fibreglass and borosilicate glasses. Colourless cryst. V. spar. sol. H_2O.

Mineral-form [12007-94-2]

Probertite, 10CI, 9CI

Occurs in assoc. with other borate minerals e.g. Colemanite. Brittle cryst.

Menzel, H. *et al*, *Z. Anorg. Allg. Chem.*, 1940, **245**, 157, 197 (*synth*)
Rumanova, I.M. *et al*, *Sov. Phys. Crystallogr. (Engl. Transl.)*, 1966, **10**, 513 (*cryst struct*)

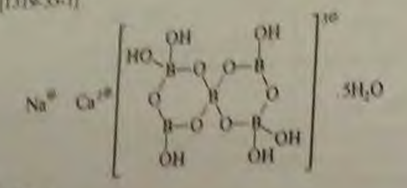
$B_5CaH_{10}NaO_{17}$ IC-001121

Calcium sodium pentaborate octahydrate

[1319-33-1]



M 405.2

Also formulated $NaCaB_5O_9.8H_2O$ or $Na_2O.2CaO.5B_2O_3.16H_2O$. Used in production of fibreglass and borosilicate glasses. Colourless solid. V. spar. sol. H_2O.

Mineral-form

Ulexite, 10Cl, 9Cl, Boronatrocalcite

Abundant in salt deposits of arid regions. Triclinic cryst. Loses $4H_2O$ on heating between 80-100°, a further 8.5 H_2O between 100-175° and the final $3.5H_2O$ at 450°.

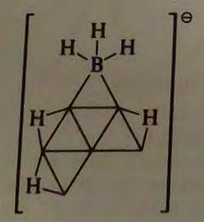
$B_7H_{12}^{\ominus}$ IC-001160
Dodecahydroheptaborate(1−), 9CI, 8CI
[12430-09-0]

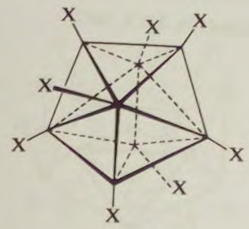


M 87.7 (ion)
arachno-.
K salt:
$B_7H_{12}K$ M 126.4
Sol. CH_2Cl_2. Dec. at r.t.
Tetrabutylammonium salt: [57298-54-1].

Sol. CH_2Cl_2. Dec. at r.t.
Remmel, R.J. *et al*, *J. Am. Chem. Soc.*, 1975, **97**, 5395 (*synth, pmr, B-11 nmr*)

B_7H_{13} IC-001161
Heptaborane(13), 11CI, 9CI, 8CI
[12008-34-3]
M 88.7
arachno - but detailed struct. unknown. Not isol. - ms evidence only.
Fehlner, T.P. *et al*, *J. Am. Chem. Soc.*, 1964, **86**, 1012 (*ms*)
Bayliss, A.B. *et al*, *J. Am. Chem. Soc.*, 1966, **88**, 929 (*ms*)

B_8Br_8 IC-001162
Octabromooctaborane(8), 11CI
Boron bromide (B_8Br_8), 10CI, 8CI. Octaboron octabromide
[12589-30-9]



X = Br

M 725.7
Air- and moisture-sensitive dark red-brown solid. Sol. halogenated solvs. Dec. at 200° *in vacuo* to B_9Br_9.
Kutz, N.A. *et al*, *Inorg. Chem.*, 1980, **19**, 3295 (*synth, ms, B-11 nmr*)
Markwell, A. *et al*, *Polyhedron*, 1982, **1**, 134 (*synth, ms*)

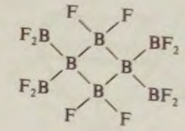
B_8Cl_8 IC-001163
Octachlorooctaborane(8), 11CI
Boron chloride (B_8Cl_8), 8CI. Octaboron octachloride
[32915-80-3]

As Octabromooctaborane(8), IC-001162 with

X = Cl

M 370.1
Air- and moisture-sensitive purple or dark red solid. Sol. BCl_3, CH_2Cl_2. Mp 185° (sealed tube). Dec at 200° to B_9Cl_9.
Jacobsen, R.A. *et al*, *J. Chem. Phys.*, 1959, **31**, 605 (*cryst struct*)
Lanthier, G.F. *et al*, *J. Inorg. Nucl. Chem.*, 1971, **33**, 1569 (*synth, uv, ir, ms*)
Emery, S. *et al*, *J. Am. Chem. Soc.*, 1982, **104**, 6790 (*synth, B-11 nmr*)

B_8F_{12} IC-001164
1,1,3,3-Tetrakis(difluoroboryl)-2,2,4,4-tetrafluorotetraborane(8), 9CI
Dodecafluorooctaborane(12)
[39114-22-2]



M 314.4
Pale yellow in solid state – yellow, oily volatile liq. unstable at r.t. Dec. rapidly in gas phase. Sol. CH_2Cl_2.
▷ Reacts explosively with air or water.
Timms, P.L., *J. Am. Chem. Soc.*, 1967, **89**, 1629 (*synth*)
Kirk, R.W. *et al*, *J. Chem. Soc., Dalton Trans.*, 1972, 1392 (*synth, ir, ms, B-11 nmr, F-19 nmr, uv*)

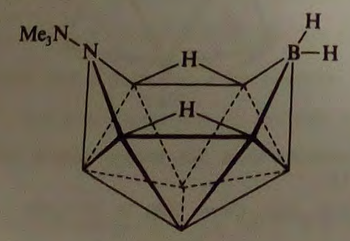
IC-001196

$B_9H_{12}N$

6-Azadecaborane(12), 11CI, 9CI, 8CI

[58985-53-8]



Me_3N complex

M 123.4

nido-. Synth. by degradation of $NaB_{10}H_{12}NO_2$ by conc. H_2SO_4 or from $NaB_9H_{12}NH$ + conc. H_2SO_4 in pentane. Air sensitive colourless cryst. Sol. CH_2Cl_2, CCl_4, MeCN. Subl. 79-80°.

Me_3N complex: [11092-85-6].
Synth. from $[Me_4N]Me_2NNB_9H_{12}$ and MeI in MeCN. Colourless cryst. (MeCN/EtOH). Dec. at 176.5° without melting.

MeCN complex:
$C_2H_{15}B_9N_2$ M 164.4

Synth. by oxidation of $[B_9H_{12}NH]^{\ominus}$ with Br_2 in MeCN. Slowly dec. in air. Mp 85-88°.

Cyclohexylisocyanide complex: [103904-39-8].
$C_7H_{23}B_9N_2$ M 232.5
Colourless cryst. (MeCl/hexane). Sol. CH_2Cl_2. Mp 115-117°. Cyclohexylisocyanide at 6-position.

Py complex: [103904-40-1].
Synth. from fresh $B_9H_{11}NH$ and Py in pentane. Yellow plates (MeCl/hexane). Mp 122-123°.

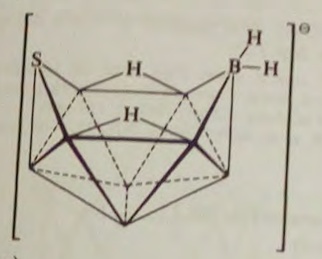
Hertler, W.R. *et al, Inorg. Chem.*, 1967, **6**, 1696 (*synth*)
Base, K. *et al, J. Chem. Soc., Chem. Commun.*, 1981, 1162 (*synth, ir, pmr, B-11 nmr, uv, ms*)
Arafat, A. *et al, Inorg. Chem.*, 1986, **25**, 3757 (*synth, cryst struct, B-11 nmr*)
Kester, J.G. *et al, Inorg. Chem.*, 1988, **27**, 4529 (*synth, B-11 nmr, ms*)

IC-001197

$B_9H_{12}S^{\ominus}$

Dodecahydro-6-thiadecaborate(1−), 11CI, 10CI, 9CI, 8CI

[39448-31-2]



M 141.4 (ion)

arachno-.

Cs salt: [11092-86-7].
Colourless cryst (H_2O). Sol. MeCN.

Me_4N salt: [51293-01-7].
Colourless cryst. (Me_2CO). Sol. MeCN.

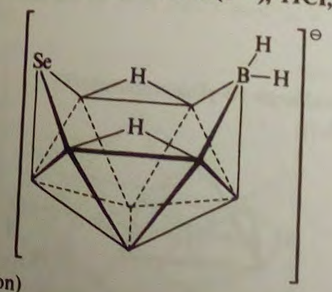
[45979-10-0]

Hertler, W.R. *et al, Inorg. Chem.*, 1967, **6**, 1696 (*synth, ir, B-11 nmr, uv, electrochem*)
Inorg. Synth., 1983, **22**, 226 (*synth, ir, B-11 nmr*)

IC-001198

$B_9H_{12}Se^{\ominus}$

Dodecahydro-6-selenadecaborate(1−), 11CI, 10CI



M 188.3 (ion)

arachno-.

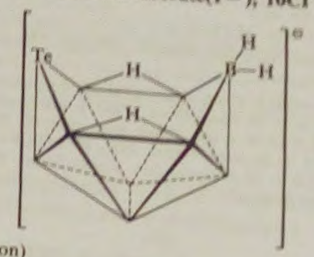
Me_4N salt: [73116-65-1].
Colourless cryst. (MeCN aq.). Sol. Me_2CO, MeCN.
Dec. at 335-340° without melting.

Friesen, G.D. *et al, Inorg. Chem.*, 1980, **19**, 1485 (*synth, ir, B-11 nmr*)

IC-001199

$B_9H_{12}Te^{\ominus}$

Dodecahydro-6-telluradecaborate(1−), 10CI



M 236.9 (ion)

arachno-.

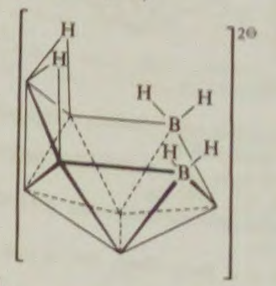
Me_4N salt: [73116-66-2].
Pale yellow cryst. (Me_2CO/MeOH); has limited stability in air. Sol. MeCN.

Friesen, G.D. *et al, Inorg. Chem.*, 1980, **19**, 1485 (*synth, ir, B-11 nmr*)

IC-001200

$B_9H_{13}^{2\ominus}$

Tridecahydrononaborate(2−)



M 110.4 (ion)

arachno-.

Di-Na salt: [119391-53-6].
$B_9H_{13}Na_2$ M 156.3
White solid. Mod. sol. THF.
▷ Some preparations of this salt lead to explosions.

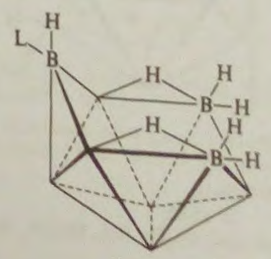
Bis-K[crypt] salt: [119391-52-5].
Colourless cryst. (MeCN/Et_2O). Sol. MeCN.

Getman, T.D. *et al, Inorg. Chem.*, 1989, **28**, 1507 (*synth, ir, pmr, B-11 nmr, cryst struct*)

IC-001201

B_9H_{13}

Nonaborane(13)



L = MeCN

MeCN complex

M 110.4

Obt. as complexes which have *arachno*-structs.

4-MeCN complex: [32357-05-4]. *4-(Acetonitrile) nonaborane(13), 11Cl. Nonaborane(13) compd. with acetonitrile, 8Cl*

$C_2H_{16}B_9N$ M 151.4

Colourless cryst. Sol. MeCN, CH_2Cl_2. Mp > 300°.

arachno-.

Wang, F.E. *et al, J. Chem. Phys.*, 1961, **35**, 1335 (*cryst struct*)

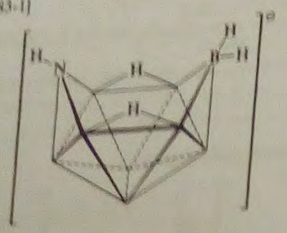
IC-001202

$B_9H_{13}N^{\ominus}$

Tridecahydro-6-azadecaborate(1−), 11Cl, 10Cl, 8Cl

[66272-83-1]



M 124.4 (ion)

arachno-

Cs salt: Colourless cryst. (EtOH/C_6H_6/cyclohexane).

Me_4N salt: [12403-49-5].

Colourless cryst. (aq. AcOH). Sol. MeCN, EtOH. Mp > 300°. Ir ν_{B-H} 3390 cm^{-1}.

Bis(triphenylphosphine)iminium salt: [103885-37-6]. Sol. CH_2Cl_2.

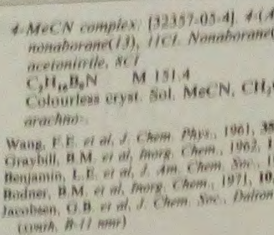
Hertler, W.R. *et al, Inorg. Chem.*, 1987, **6**, 1696 (*synth, pmr, B-11 nmr, ir*)
Base, K. *et al, J. Chem. Soc., Chem. Commun.*, 1981, 1162 (*synth*)
Arafat, A. *et al, Inorg. Chem.*, 1986, **25**, 3757 (*synth, pmr, B-11 nmr, ir*)

IC-001203

$B_9H_{14}^{\ominus}$

Tetradecahydrononaborate(1−), 11Cl, 10Cl, 9Cl, 8Cl

[12430-28-3]



M 111.4 (ion)

arachno-

K salt: [39296-28-1].

$B_9H_{14}K$ M 150.5

Colourless solid (Et_2O). Sol. MeCN, H_2O. Dec. in Et_2O over 24h

Cs salt: [12693-05-0].

B_9CsH_{14} M 244.3

Colourless solid. Insol. C_6H_6.

Me_4N salt: [12545-03-6].

Colourless solid. Insol. C_6H_6.

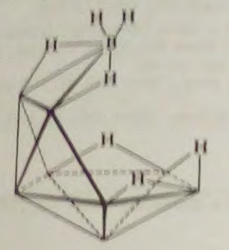
Benjamin, L.E. *et al, J. Am. Chem. Soc.*, 1963, **85**, 2674 (*synth, str*)
Inorg. Synth., 1989, **26**, 1 (*synth, B-11 nmr*)

IC-001204

B_9H_{15}

Nonaborane(15), 10Cl

[19465-30-6]



M 112.4

arachno-. Cryst. solid (pentane at −30°), liq. at r.t. Sol. pentane. Mp 2.5°.

Simpson, P. *et al, J. Chem. Phys.*, 1961, **35**, 1340 (*cryst struct*)
Burg, A. *et al, Inorg. Chem.*, 1962, **1**, 725 (*ir*)

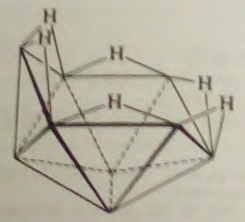
Schaeffer, R. *et al, Inorg. Chem.*, 1972, **11**, 3102 (*synth, nmr*)

IC-001205

B_9H_{15}

Isononaborane(15), 10Cl

[12447-79-9]



M 112.4

arachno-. Solid, dec. above −30°. Sol. pentane.

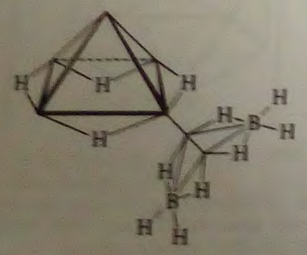
Dobson, J. *et al, Inorg. Chem.*, 1968, **7**, 399 (*synth*)
Moody, D. *et al, Inorg. Chem.*, 1976, **15**, 233 (*nmr*)

IC-001206

B_9H_{17}

2'-(1-Tetraboran-10-yl)pentaborane(9)

[93110-35-1]



M 114.4

conjuncto-. Synth. from B_9H_{11} + B_2H_6 using $PtBr_2$ as catalyst at 25°. Dec. in liquid state above −20°

Swidler, L.G. *et al, J. Am. Chem. Soc.*, 1984, **106**, 7793 (*synth, B-11 nmr, pmr*)

$B_{10}BeH_{20}$

Bis[decahydropentaborato(1−)]beryllium

[65762-38-1]

IC-001207

M 137.2

conjuncto-. The two B_5H_{10} units are staggered. Air- and moisture sensitive volatile solid (1,3-dimethylbenzene at −37°). Sol. C_6H_6, toluene. Mp 52°. Cf. (η^5-2,4-Cyclopentadien-1-yl)[decahydropentaborato(1−)] beryllium, IC-004759.

Pyrophoric, toxic.

[65859-23-6]

Gaines, D.F. *et al, Inorg. Chem.*, 1978, **17**, 1238, 1242 (*synth, ir, B-11 nmr, pmr, cryst struct*)

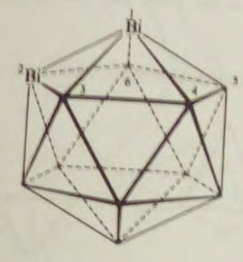
$B_{10}Bi_2H_{10}$

1,2-Dibismadodecaborane(10)

IC-001208



M 536.1

closo-. Colourless cryst. (Me_2CO). Sol. toluene, 1,2-dichloroethane. Mp > 500°. Darkens at > 350°.

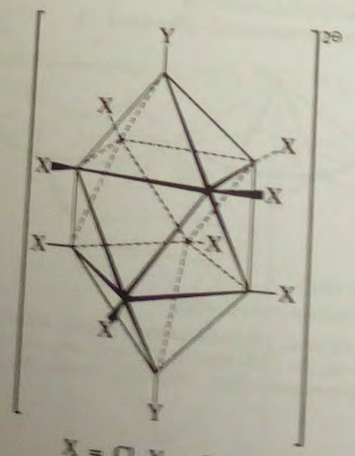
Little, J.L. *et al, Inorg. Chem.*, 1990, **29**, 804 (*synth, ir, B-11 nmr, ms, cryst struct*)

$B_{10}Br_2Cl_8^{2\ominus}$

1,10-Dibromooctachlorodecaborate(2−), 10Cl, 9Cl, 8Cl

IC-001209

[61674-46-2]



X = Cl, Y = Br

M 551.5 (ion)

closo-.

Di-Cs salt: [12447-81-3].

Colourless cryst. + $1H_2O$ (H_2O). Sol. H_2O, MeCN.

Bis-Me_4N salt: Colourless cryst. (aq. EtOH). Sol. MeCN. Darkens at 340° - does not melt below 400°.

Knoth, W.H. *et al, J. Am. Chem. Soc.*, 1967, **89**, 4842 (*synth, str, ir*)

$B_{10}Br_{10}^{2\ominus}$

Decabromodecaborate(2−), 11Cl, 10Cl, 9Cl, 8Cl

IC-001210

As 1,10-Dibromooctachlorodecaborate(2−), IC-001209 with

X = Y = Br

M 907.1 (ion)

closo-.

Di-Cs salt: [12356-10-4].

$B_{10}Br_{10}Cs_2$ M 1172.9

Colourless cryst. (H_2O). Sol. H_2O. V. stable to heat and chemical attack.

Bis-Me_4N salt: Colourless cryst. (H_2O). Sol. H_2O, MeCN. V. stable to chemical attack.

Muetterties, E.L. *et al, J. Am. Chem. Soc.*, 1962, **84**, 2506 (*raman*)
Knoth, W.H. *et al, Inorg. Chem.*, 1964, **3**, 159 (*synth, str, ir, B-11 nmr, electrochem*)

$B_{10}Cl_2CuH_{12}^{2\ominus}$

Dichloro[tridecahydrodecaborato(1−)]cuprate(2−), 8CI

[12555-75-8]

$[Cl_2CuB_{10}H_{13}]^{2\ominus}$

M 255.6 (ion)
Struct. prob. based on $[B_{10}H_{13}]^{\ominus}$. Synth. from $CuCl_2.2H_2O$ in THF + decaborane and NaH in Et_2O at −10°.
Bis-Et_4N salt: Bright yellow solid (THF). Darkens at 145°, does not melt below 400°.

Muetterties, E.L. *et al*, *Inorg. Chem.*, 1970, **9**, 2447 (*synth, P-31 nmr, B-11 nmr*)

IC-001214

$B_{10}Cl_8N_2^{2\ominus}$

1,10-Diazidooctachlorodecaborate(2−), 8CI

As 1,10-Dibromooctachlorodecaborate(2−), IC-001209 with

X = Cl, Y = N_3

M 475.7 (ion)
closo-.
Di-Cs salt: Colourless cryst. (H_2O). Sol. H_2O, MeCN.
▷ Shock sensitive; explodes on heating to 224°.

Knoth, W.H. *et al*, *J. Am. Chem. Soc.*, 1964, **86**, 115 (*synth*)
Knoth, W.H., *J. Am. Chem. Soc.*, 1966, **88**, 935 (*synth, uv, ir*)

IC-001215

$B_{10}Cl_{10}^{2\ominus}$

Decachlorodecaborate(2−), 11CI, 10CI, 9CI, 8CI

[51358-33-9]

As 1,10-Dibromooctachlorodecaborate(2−), IC-001209 with

X = Y = Cl

M 462.6 (ion)
closo-.
Di-Cs salt: [12360-16-6].
$B_{10}Cl_{10}Cs_2$ M 728.4
Colourless cryst. (H_2O). Sol. H_2O. Stable in air up to 400°
Di-H_3O compd.: Decachlorodecaboric acid
$B_{10}Cl_{10}H_6O_2$ M 500.6
Colourless solid + $2H_2O$. Sol. H_2O, MeCN; insol. C_6H_6, CCl_4. Strong acid, comparable with H_2SO_4.
Bis-Me_4N salt: [80860-73-7].
Colourless cryst. (aq. EtOH). Sol. MeCN.

IC-001217

$B_{10}EuH_{10}$

Europium(*II*) decahydrodecaborate

[123623-29-0]

$EuB_{10}H_{10}$

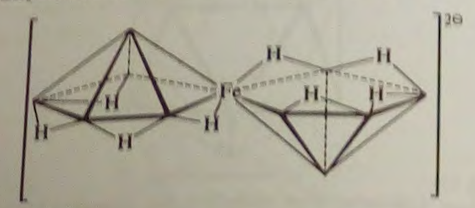
M 270.1
Believed to be essentially ionic: $Eu^{2\oplus}B_{10}H_{10}^{2\ominus}$. Grey-green solid. Sol. Py → bright yellow soln. Yb analogue also isol.

White, J.P. *et al*, *J. Am. Chem. Soc.*, 1989, **111**, 8946 (*synth, ir*)

IC-001218

$B_{10}FeH_{18}^{2\ominus}$

Bis[nonahydropentaborato(2−)]ferrate(2−)



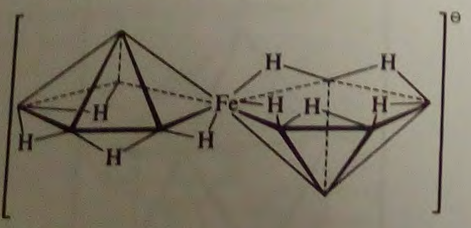
M 182.0 (ion)
Di-K salt: Rust red solid.

Shore, S.G. *et al*, *Abstr. 4th Internat. Meeting Boron Chemistry*, Imeboron IV, 1979 Abstract 07 (*synth*)
Compr. Organomet. Chem., Pergamon, Oxford, 1982, **6**, 879 (*synth*)

IC-001219

$B_{10}FeH_{19}^{\ominus}$

[Decahydropentaborato(1−)] [nonahydropentaborato(2−)]ferrate(1−)



M 183.1 (ion)
K salt: Yellow-brown solid.

Shore, S.G. *et al*, *Abstr. 4th Internat. Meeting Boron Chemistry*, Imeboron IV, 1979 Abstract 07 (*synth, pmr, B-11 nmr*)
Compr. Organomet. Chem., Pergamon, Oxford, 1982, **6**, 879 (*synth*)

$B_{10}FeH_{20}$

Bis[decahydropentaborato(1−)]iron

IC-001220

M 184.1
Dark brown solid.

Shore, S.G. *et al*, *Abstr. 4th Internat. Meeting Boron Chemistry*, Imeboron IV, 1979 Abstract 07 (*synth, proposed struct*)
Compr. Organomet. Chem., Pergamon, Oxford, 1982, **6**, 879 (*synth*)

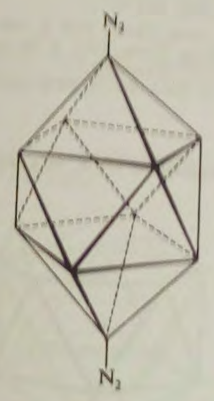
$B_{10}H_8N_4$

1,10-Bis(diazo)decaborane(10)

1,10-Bis(dinitrogen)decaborane(10), 11CI. Decaborane(8) compd. with nitrogen (1:2), 8CI

IC-001221

[12008-54-7]



M 172.2
closo-. Colourless cryst. (50% aq. EtOH). Sol. C_6H_6, MeCN, CH_2Cl_2; reacts with C_6H_6.

Knoth, W.H., *J. Am. Chem. Soc.*, 1966, **88**, 935 (*synth, uv, ir, B-11 nmr*)

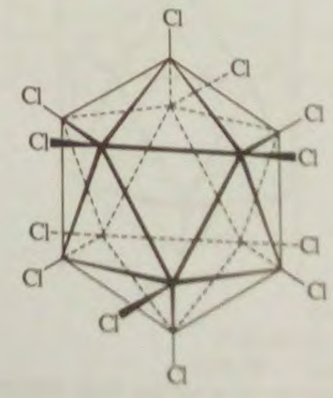
$B_{12}Cl_{12}$

Dodecachlorododecaborane(12), 11Cl

[84879-96-9]



M 555.1

Not isol. pure. Subl. ~80°.

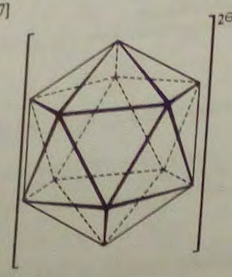
Awad, S.B. *et al*, *J. Inorg. Nucl. Chem.*, 1978, **40**, 395 (*synth*)
Massey, A.G., *Adv. Inorg. Chem. Radiochem.*, 1983, **26**, 1 (*rev*)
Saulys, D.A. *et al*, *Inorg. Chem.*, 1983, **22**, 1821 (*synth, ms, B-11 nmr*)

IC-001258

$B_{12}H_{12}^{2\ominus}$

Dodecahydrododecaborate(2−), 11CI, 10CI, 9CI, 8CI

[12356-13-7]



M 141.8 (ion)
closo-. Salts are remarkably stable to chemical attack.

Di-Na salt: [12008-78-5].
$B_{12}H_{12}Na_2$ M 187.8
Colourless cryst. (H_2O). V. sol. H_2O. Anhyd. compd. formed from tetrahydrate at > 195°.

Di-H_3O compd.: Dodecahydrododecaboric acid
$B_{12}H_{18}O_2$ M 179.8
Colourless solid + $2H_2O$. Hygroscopic. Sol. H_2O. Stronger acid than H_2SO_4.

Bis-Et_3NH salt: Colourless needles (dil. aq. HCl). Insol. H_2O. Mp 298-300° dec.

Wunderlich, J.A. *et al*, *J. Am. Chem. Soc.*, 1960, **82**, 4427 (*cryst struct*)

IC-001290

Ba

Barium

[7440-39-3]

Ba

M 137.3

Atomic No. 56. Ground state electron config. $[Xe]6s^2$. Isol. by Sir Humphrey Davy in 1808. At least 25 isotopes of which 7, ^{130}Ba, ^{132}Ba, ^{134}Ba, ^{135}Ba, ^{136}Ba, ^{137}Ba, ^{138}Ba are naturally occuring (^{137}Ba, and less so, ^{135}Ba, are used in nmr spectroscopy). Abundance 390 ppm (earth's crust), 0.03 ppm (sea water). Struct. normally bcc, but high pressure forms are known. Also undergoes phase transitions at 309° and 495°. Main mineral is barite ($BaSO_4$). Synth. by thermal dec. of $Ba(N_3)_2$, and from BaO + Al or BaO or BaF_2 with H_2. Getter for removal of residual gases in vacuum tubes. Alloyed with steels to improve corrosion wear resistance. Used in conjunction with Cs in thermionic energy convertors. Commercially available. Soft silvery white metal. The bulk metal tarnishes in air forming Ba_3N_2, BaO, $Ba(OH)_2$ and $BaCO_3$. Finely divided metal ignites in air → mainly Ba_3N_2. Dissolves in H_2O forming $Ba(OH)_2$ solns. Sol. $NH_3(l)$ → blue-black soln. Mp 727° (710°). Bp 1640° (1537°). Burns with yellow-green flame.

▷ Compds. are v. toxic. Ignites readily. Reactive towards H_2O and halogenated hydrocarbons, e.g. CCl_4. CQ8370000.

IC-001302

$BaCl_6Tc$
Barium hexachlorotechnetate(*IV*) ($BaTcCl_6$)
[104185-51-5]

$BaTcCl_6$

M 448.9
Synth. by reduction of $Ba(TcO_4)_2$ in HCl + $BaCl_2$. Golden-yellow cryst., dec. at *ca.* 440°. Hydrol. to TcO_2 in H_2O. Sol. aq. HCl; spar. sol. EtOH, Me_2CO; insol. CCl_4, C_6H_6.

Zaitseva, L.L. *et al, Zh. Neorg. Khim.*, 1986, **31**, 1388; *Russ. J. Inorg. Chem. (Engl. Transl.)*, 1986, **31**, 793 (*synth, ir, tga, powder struct*)

IC-001303

$BaCrO_4$
Barium chromate(*VI*) ($BaCrO_4$)
CI Pigment yellow 31. Lemon yellow. Ultramarine yellow. Permanent yellow. CI 77103. Chromate(VI) barium salt (1:1)
[10294-40-3]

$BaCrO_4$

M 253.3
Known since 1809. Manuf. from $BaCl_2$ and Na_2CrO_4. Synth. from e.g. chromic acid and $Ba(OH)_2$. Used in pyrotechnics and high temp. batteries. Pigment for artists' paints, glass, porcelain. Anticorrosive. V. pale yellow cryst. Darkens on heating. Sol. strong acids; insol. org. solvs. Mp ~1400° dec.

IC-001306

BaF_2

Barium fluoride (BaF_2), 8CI

[7787-32-8]

BaF_2

M 175.3
Fluorite struct. Prepd. by reaction of BaO or $BaCO_3$ with NH_4HF_2 or NH_4F. High purity BaF_2 has been obt. by fluorination of $BaCl_2$ at 600-1000° in a pyrocarbon crucible. Commercially available. Component of speciality glasses, including ir-transmitting glasses. Forms solid solns. with wide variety of metal halides. Colourless, cubic cryst. Spar. sol. H_2O (0.12 g per 100 cm^3 at 25°). Mp 1368°. Bp 2137°. ΔH_f° −1209 kJ mol^{-1}; ΔG_f° −1158 kJ mol^{-1}; S° 96.4 J K^{-1} mol^{-1}.

▷ Highly toxic, corrosive. CQ9100000.

BaF_6Si

Barium hexafluorosilicate(*IV*)

Hexafluorosilicate(2−) barium salt, 8CI. Barium fluosilicate

[17125-80-3]

$Ba[SiF_6]$

M 279.4
Comprises $Ba^{2\oplus}$ cations and $SiF_6^{2\ominus}$ anions. Synth. by reaction of aq. H_2SiF_6 with $Ba(OH)_2$ or $BaCO_3$. Manuf. by treatment of H_2SiF_6 vapour with aq. $BaCl_2$ in a contactor. Wood preservative, esp. in combination with pentachlorophenolates. Colourless rhombohedral cryst. Dec. on heating (~430°) to form SiF_4 and BaF_2. Spar. sol. H_2O (0.026 g per 100 cm^3 at 17°; 0.09 g per 100 cm^3 at 100°); insol. EtOH.

▷ Toxic. CR0525000.

$BaGa_2Se_4$

Barium gallium selenide ($BaGa_2Se_4$)

[51403-85-1]

$BaGa_2Se_4$

M 592.6
Orthorhombic $SrAl_2Se_4$ struct. related to TlSe. Contains $GaSe_4$ tetrahedra and 8-coord. (square antiprismatic) Ba. Synth. from $BaGa_2$ and Se at 1000°. Beige translucent air- and moisture-sensitive cryst. (melt).

Klee, W. *et al, Z. Anorg. Allg. Chem.*, 1981, **479**, 125 (*synth, cryst struct*)

IC-001317

$BaGa_2Te_4$

Barium gallium telluride ($BaGa_2Te_4$)

[39297-27-3]

$BaGa_2Te_4$

M 787.1
Structure has $GaTe_4$ tetrahedra sharing corners with half filled $BaTe_8$ antiprisms; (related to TlSe). Obt. from stoichiometric amounts of the elements at 1200°. Dark red air- and moisture-sensitive prisms.

Franke, E.R. *et al, Z. Naturforsch., B*, 1972, **27**, 1308 (*synth, props*)

IC-001318

$BaGeO_3$

Barium germanate ($BaGeO_3$)

Barium metagermanate

[12047-14-2]

$BaGeO_3$

M 257.9
Exists as two phases at atm. press. Various high pressure phases also known. Amorphous at r.t. Complex synth. from Ge and Ba propoxides in aq. NH_3.

α-form
Pseudo wollastonite hexagonal ring struct. Converts to β-form at 1180-1200°.

β-form
Orthorhombic struct. with infinite chains of GeO_4 tetrahedra. From amorph. form at 630-660°. Converts to α-form at 1130-1150°.

$[BaHO_3Ru]$

Barium ruthenium trioxide-hydrogen system
Barium ruthenate bronze. Barium ruthenate hydride

H_xBaRuO_3

Hydrogen content continuously variable. Formed by absorption of H_2 by $BaRuO_3$ at r.t.

Shelef, M. *et al. J. Inorg. Nucl. Chem.*, 1976, **38**, 99 (*synth*)

IC-001322

$BaHO_4P$

Barium phosphate (BaHPO$_4$)
Barium phosphate (1:1), 9CI, 8CI. Barium monohydrogenphosphate
[10048-98-3]

$BaHPO_4$

M 233.3
Orthorhombic. Each Ba ion coordinated to 10 O atoms, being bonded to form PO_4 tetrahedra by edge sharing and to 2 more by corner sharing. The PO_4 groups are linked by H-bonds into continuous chains. Synth. from BaO in excess H_3PO_4, or Ba^{2+} + $(NH_4)_2HPO_4$ in H_2O. Also from $Ba(NH_4)PO_4$ when heated. Colourless thin plates or flat needles. Loses H_2O at 500° to give the pyrophosphate. Stable to H_2O at 90°.

BaH_2O_2

Barium hydroxide ($Ba(OH)_2$), 8CI
[17194-00-2]

$Ba(OH)_2$

M 171.3
Normally obt. as various hydrates, esp. octahydrate. Prepd. by thermal dehydration of the hydrates. White powder. Dec. on heating with H_2O loss. Mp 398°. ΔH_f° −946.3 kJ mol^{-1}; ΔG_f° −859.5 kJ mol^{-1}; S° 107 J K^{-1} mol^{-1}.

▷ Highly toxic, corrosive.

Monohydrate: [22326-55-2].
BaH_4O_3 M 189.3
Prep. by thermal dec. of the octahydrate at 110° in a dry nitrogen stream. Commercially available. A monoclinic modification has been cryst. from EtOH.
Trihydrate: [66905-77-9].

Cryst. from the melt obt. by thermal dec. of the octahydrate at 110°. Colourless orthorhombic cryst.
Hexahydrate: [86624-92-9].
$BaH_{12}O_8$ M 279.4
Octahydrate: [12230-71-6].
$BaH_{20}O_{10}$ M 315.4
Commercially available. Colourless, monoclinic cryst., dec. on heating with H_2O loss. Sol. H_2O (5.6 g per 100 cm^3 at 15°; 95 g per 100 cm^3 at 78°); spar. sol. EtOH, insol. Me_2CO. Mp 78°. ΔH_f° −3342 kJ mol^{-1}, ΔG_f° −2793 kJ mol^{-1}; S° 427 J K^{-1} mol^{-1}.

$BaH_4O_8P_2$

Barium phosphate ($Ba(H_2PO_4)_2$)
Barium phosphate (1:2), 9CI, 8CI. Barium bis(dihydrogenphosphate)
[13466-20-1]

$Ba(H_2PO_4)_2$

M 331.3
Two forms present in approx. equal amounts during cryst. growth. Orthorhombic with Ba ions coordinated by 8 O (Ba—O 260-297 pm) and between layers of PO_4 tetrahedra (P—O 149-158 pm, OPO 103.6-119.1°) in H-bonded dimers, and triclinic, with open 2-D network of PO_4 linked by Ba—O (nine at 267.6-296.7 pm) bonds. Hydrates have been reported. Synth. from $BaCO_3$, BaO, or $Ba_3(PO_4)_2$ + H_3PO_4. Transparent colourless plates.

IC-001327

$BaH_4O_8P_2Zn_3$

Barium zinc phosphonate ($BaZn_3(HPO_3)_4$)
Phosphonic acid, barium, zinc (4 / 1 / 3) salt

$Zn_3Ba(HPO_3)_4$

M 668.4
Hexahydrate: [123269-41-6].
Prep. from BaH_2PO_2, $ZnCl_2$ in aq. H_3PO_3. Colourless rods (aq. EtOH). Contains both octahedral $(Zn(OH_2)_6)$ and tetrahedral Zn; 12-coord. Ba $(Ba(OH_2)_8)$. Ba bridges the Zn(1) octahedron and the P(1) tetrahedron.

Cruz-Avila, C.Y. *et al, Inorg. Chem.*, 1989, **28**, 2068 (*synth, thermal anal, cryst struct*)

IC-001328

BaI_2

Barium iodide (BaI_2), 8CI
[13718-50-8]

BaI_2

M 391.1
Struct. type $PbCl_2$. Prepd. directly by reaction of BaH_2 with $[NH_4]I$ in Py. Alternatively obtained by slow neutralisation of $BaCO_3$ with aq. HI. Cryst. as hydrate. Thermal dec. affords anhyd. prod. Forms solid solns. with other alkaline earth metal halides which when activated with Eu(2+), are used in phosphors for radiographic image conversion screens. Deliquescent, colourless, orthorhombic cryst. Light sensitive. V. sol. H_2O (170 g per 100 cm^3 at 0°), EtOH (77 g per 100 cm^3 at 20°). Mp 711°. ΔH_f° −605 kJ mol^{-1}, ΔG_f° −601 kJ mol^{-1}, S° 165.1 J K^{-1} mol^{-1}.

▷ Highly toxic.

Dihydrate: [7787-33-9].
$BaH_4I_2O_2$ M 427.1
Commercially available. Deliquescent, colourless orthorhombic light sensitive cryst., dec. on heating by H_2O loss (−H_2O at 99°, −2H_2O at 539°). V. sol. H_2O (200 g per 100 cm^3 at 15°; 269 g per 100 cm^3 at 100°), mod. sol. EtOH (1.07 g per 100 cm^3 at 15°). ΔH_f° −1217 kJ mol^{-1}.
Hexahydrate: [13477-15-1].
$BaH_{12}I_2O_6$ M 499.2
Colourless, hexagonal light sensitive cryst. (aq. soln.); dec. on heating by H_2O loss. V. sol. H_2O (410 g per 100 cm^3 at 0°), EtOH. Struct. resembles $K_2Pt(SCN)_6$.

BaI_2O_6

Barium iodate(V) ($Ba(IO_3)_2$)
Iodic acid, barium salt, 8CI
[10567-69-8]

$Ba(IO_3)_2$

M 487.1

Prepd. by thermal dehydration of the monohydrate under vacuum. Colourless monoclinic cryst., hygroscopic. Dec. on heating with formation of barium periodate. Spar sol. H_2O (0.04 g per 100 cm^3 at 25°). ΔH_f° −1027 kJ mol^{-1}; ΔG_f° −865 kJ mol^{-1}; S° 249 J K^{-1} mol^{-1}.

Monohydrate: [7787-34-0].
Cryst. from aq. solns. of $Ba(IO_3)_2$ obt. by slow reduction of HIO_4 by lactic acid in the presence of $Ba(NO_3)_2$. Colourless monoclinic cryst.; dec. on heating with H_2O loss (−H_2O at 180°). Spar. sol. H_2O; insol. EtOH, Me_2CO. ΔH_f° −1322 kJ mol^{-1}; ΔG_f° −1104 kJ mol^{-1}; S° 297 J K^{-1} mol^{-1}.

$BaIn_2Te_4$

Barium indium telluride ($BaIn_2Te_4$)

[39297-28-4]

$BaIn_2Te_4$

M 877.3
Structure has $InTe_4$ tetrahedra sharing corners half filled with $BaTe_8$ antiprisms; struct. resembles TlSe. From stoichiometric amounts of the elements at 1200°. Metallic grey air- and moisture-sensitive prisms.

Franke, E.R. *et al*, *Z. Naturforsch., B*, 1972, **27**, 1308 (*synth, props*)

IC-001332

$BaLaMgO_6Ru$

Barium magnesium hexaoxoruthenatelanthanate ($BaMgRuLaO_6$), 10CI

Barium magnesium lanthanum ruthenium hexaoxide. Barium magnesium lanthanum ruthenium oxide ($BaMgLaRuO_6$)

[74511-54-9]

$BaLaMgRuO_6$

M 497.6
Struct. related to Barium lanthanum ruthenium oxide (Ba_2LaRuO_6), IC-001377. Antiferromagnetic solid (T_N ~ 20-40 K). Analogues with Mg replaced by Ni, Co or Zn are also known. All contain Ru(*V*).

Fernandez, I. *et al*, *J. Solid State Chem.*, 1980, **32**, 97 (*mössbauer, magnetism*)

IC-001333

$BaMnO_3$

Barium manganese(*IV*) oxide ($BaMnO_3$), 9CI

[12230-80-7]

$BaMnO_3$

M 240.2
Struct. resembles $CsNiF_3$, with $Mn^{IV}O_6$ octahedra. Synth. from $BaMnO_4$ at 500-1000° under N_2. Yellowish-green. Antiferromagnetic at low temp.

Scholder, R., *Z. Elektrochem.*, 1952, **56**, 879 (*synth*)

IC-001335

$BaMoO_4$

Barium molybdate(*VI*) ($BaMoO_4$)

Barium molybdenum oxide ($BaMoO_4$)

[7787-37-3]

$BaMoO_4$

M 297.2
Contains the tetrahedral $[MoO_4]^{2\ominus}$ ion. Scheelite type lattice. Obt. by combining aq. solns. of sodium or ammonium molybdate and a sol. barium salt or by heating mixed solid oxides. White solid. Reduced by H_2 on heating to give red $BaMoO_3$. Reacts with O_2 at 800-1200° to give yellow Ba_2MoO_5. Electrical conductor. Insol. H_2O. Mp 1480°.

BaN_2O_4

Barium nitrite ($Ba(NO_2)_2$)

Nitrous acid, barium salt, 8CI

[13465-94-6]

$Ba(NO_2)_2$

M 229.3
Cryst. from aq. soln. affords the hydrate which is fully dehydrated at 182°. Reagent for converting metal

sulfates to nitrites. Component of pyrotechnic compositions; oxidiser and colourant. Colourless hexagonal cryst. Dec. on heating with intermed. formation of $Ba(NO_3)_2$ and final formation of BaO. Pyroelectric. V. sol. H_2O (67 g per 100 cm^3 at 20°; 300 g per 100 cm^3 at 100°); mod. sol. EtOH; insol. Me_2CO. Mp 243°.

▷ Oxidiser, highly toxic.

Monohydrate: [7787-38-4].
$BaH_2N_2O_5$ M 247.3
Cryst. from aq. solns. of $Ba(NO_2)_2$. Commercially available. Reagent for converting metal sulfates to metal nitrites; piezoelectric and pyroelectric. Pale yellow hexagonal cryst.; dec. on heating with H_2O loss (−H_2O at 182°). Undergoes sluggish reversible phase transition at 77°. V. sol. H_2O (63 g per 100 cm^3 at 20°); mod. sol. EtOH; insol. Me_2CO.

▷ Oxidiser, toxic.

BaN_2O_6

Barium nitrate ($Ba(NO_3)_2$)

Nitric acid, barium salt, 8CI. Nitrobarite

[10022-31-8]

$Ba(NO_3)_2$

M 261.3
Rare as mineral (nitrobarite). Isotypic with $Pb(NO_3)_2$. Prepd. by slow neutralisation of $Ba(OH)_2$ by aq. HNO_3. Commercially available. Component of fireworks giving green colouration to flames. Single cryst. have potential use as active media for solid-body induced Raman scattering transformers. Colourless cubic cryst. Dec. on heating with evolution of NO_2 and O_2 and formation of BaO. V. sol. H_2O (8.7 g per 100 cm^3 at 20°; 34.2 g per 100 cm^3 at 100°); insol. EtOH. Mp 592°. ΔH_f° −992 kJ mol^{-1}, ΔG_f° −797 kJ mol^{-1}, S° 214 J K^{-1} mol^{-1}.

▷ Oxidiser, highly toxic. CQ9625000.

$BaNaNdO_9Si_3$

IC-001339

Barium neodymium sodium silicate ($BaNdNa(Si_3O_9)$)

[90936-19-9]

$NaBaNd[Si_3O_9]$

M 532.8
Synthetic, unbranched, monocyclosilicate (three SiO_4 tetrahedra condensed into $[Si_3O_9]$ rings). Synth. hydrothermally from $Na_2O/BaO/Nd_2O_3/SiO_2/H_2O$ system. Cryst.

Malinovskii, Yu.A. *et al*, *Sov. Phys.-Dokl. (Engl. Transl.)*, 1984, **29**, 166 (*cryst struct*)

$BaNa_2O_6Si_2$

IC-001340

Barium sodium silicate ($BaNa_2(Si_2O_6)$)

[51118-20-8]

$Na_2Ba[Si_2O_6]$

M 335.4
Struct. comprises infinite SiO_3 chains linked through 5- and 6- coord. Na and 8-coord. Ba. Phase in the $Na_2O/BaO/SiO_2$ system. Strongly piezoelectric. Monoclinic cryst. stable to 2*M* NaOH and H_2O, leached by 2*M* HCl. Mp 895° (incongr.). Weakly birefringent.

[BaNbS] IC-001342

Barium niobium sulfides

Barium niobium sulfide ($Ba_4Nb_2S_{10}$) [95567-78-5]

(Dithio)octathioxodiniobate(8−) barium salt (1:4)

$Ba_4Nb_2S_{10}$ M 1055.7

Idealised composition. The actual composition is close to $Ba_3NbS_4(S_2)_1$. The layer struct. of BaS_3 layers in sequence CBDBABDBCBCDCACDCB (D is a disordered layer); Nb is between the layers in groups of 2 and of 3 face shared octahedra they being separated by the D layers. Synth. by heating 6BaS + 3Nb + 7S to 1000° in an evacuated graphite ampoule. Black solid.

Barium niobium sulfide ($Ba_4Nb_2S_9$) [85341-12-4]

Nonathioxodiniobate(V)(8−) barium salt (1:4), 11CI. Nonathioxodiniobate(8−) tetrabarium salt, 10CI

$Ba_4Nb_2S_9$ M 1023.7

The struct. comprises hexagonal BaS_3 layers in sequence DABABDBCBCDCACAD. The Nb are in sets of 3 face shared octahedra with D layers above and below (D is a disordered layer). The outer Nb are displaced towards the central Nb. Synth. from 4BaS + 2Nb + 5S at 1000°. Black solid.

Swinnea, J.S. *et al*, *J. Solid State Chem.*, 1985, **56**, 249 (*synth, cryst structs*)

$BaNiO_3$ IC-001343

Barium nickel(*IV*) oxide ($BaNiO_3$)

Barium nickelate

[11081-91-7]

$BaNiO_3$

M 244.0

Structure contains NiO_6 octahedra sharing faces to give $[NiO_3]$ chains. Grey-green solid. Mp 1160°. Sr analogue isostructural.

BaO_2

M 169.3

Prepd. by either action of air or O_2 on BaO at 500-600° or by thermal dec. of $BaCO_3$, $Ba(C_2O_4).0.5H_2O$ or $Ba(OH)_2.8H_2O$ in air. Alternatively produced by neutralisation of aq. $Ba(OH)_2$ solns. with H_2O_2. Conveniently prepd. by oxidation of BaS. Commercially available. Used to produce dil. aq. solns. of H_2O_2 by treatment with dil. H_2SO_4. Powerful oxidising agent. Pale grey powder. Dec. on heating to BaO + O_2. Dissolves in water with formation of H_2O_2. Mp 450°. ΔH_f° −634 kJ mol^{-1}; ΔG_f° −572 kJ mol^{-1}; S° 66 J K^{-1} mol^{-1}.

▷ Oxidiser, corrosive. CR0175000.

Octahydrate: [12230-86-3].

$BaH_{16}O_{10}$ M 313.4

Cryst. from aq. solns of BaO_2. Colourless hexagonal cryst. Dec. on heating with H_2O loss (−$8H_2O$ at 100°). Spar. sol. H_2O; insol. EtOH, Me_2CO, Et_2O.

Bis(hydrogen peroxide) complex: [12230-85-2].

BaH_4O_6 M 237.3

Prepd. by reaction of $Ba(OH)_2$ with 85% H_2O_2 vapour. Dec. on heating with H_2O_2 evolution.

BaO_3Ru IC-001347

Barium ruthenium(*IV*) trioxide ($BaRuO_3$)

Barium ruthenate(IV) ($BaRuO_3$), 10CI

[12009-17-5]

$BaRuO_3$

M 286.3

Exists in three different structural modifications which are formed with increasing pressure. Prep. by heating ruthenium metal with BaO_2 in air at 1000°. Catalyses reduction of $NO \rightarrow N_2$ in automobile emissions. Black cryst. Antiferromagnetic (T_N ~430K); good (but not metallic) electrical conductivity. Single crysts. grown from flux of $BaCl_2$.

9R-hexagonal-form

Form at ambient conditions. A parent struct. type, which contains face shared RuO_6 octahedra; Ru—Ru 255 pm. Unit cell volume 0.0687 nm^3.

4H-hexagonal-form

Obt. on applying pressure of 20 atm. to the ambient form. Once formed, reasonably stable. Unit cell volume 0.0675 nm^3.

6H-hexagonal-form

Obt. on applying pressure of 40-100 atm to the ambient form. Once formed, v. stable (may be heated to 1100° without change). Unit cell volume 0.0659 nm^3.

BaO_3Se IC-001348

Barium selenite ($BaSeO_3$)

Barium selenate(IV). Selenious acid, barium salt (1:1), 8CI

[13718-59-7]

$BaSeO_3$

M 264.2

Prepd. by precipitation from mixed aq. solns. of Na_2SeO_3 and $Ba(ClO_4)_2$. Commercially available. Glass colourant. Oxidises on heating in air to give $BaSeO_4$ at >510°. Thermal dec. results in BaO formation at >1285°. Pract. insol. H_2O (0.017 g per 100 cm^3 at 25°). ΔH_f° −1043.1 kJ mol^{-1}; ΔG_f° −971.9 kJ mol^{-1}; S° 177.0 J K^{-1} mol^{-1}.

▷ Highly toxic.

BaO_3Si IC-001349

Barium silicate ($BaSiO_3$)

Barium metasilicate

[13255-26-0]

$BaSiO_3$

M 213.4

Three polymorphic forms are known. Normally obt. as a single chain silicate ($2SiO_4$ units per chain). BaO_8 polyhedra form. corrugated layers in the thermodynamically stable phase above 1350°. Below this temp., struct. (not the thermodynamic product.) contains cyclic anions instead of the silicate chain. Prepd. from $BaCl_2$ and Na_2SiO_3. Cryst. Insol. H_2O. Mp 1604°. $BaSiO_3$ below 1350°.

BaO_3Sn IC-001350

Barium tin oxide ($BaSnO_3$), 8CI

Barium stannate (1:1), 10CI. Barium metastannate

[12009-18-6]

$BaSnO_3$

M 304.0

Perovskite struct. Prepd. by high temp. reaction of equimolar mixts. of $BaCO_3$ and SnO_2. High purity products are obt. by thermal dec. of $BaSn(C_2O_4)_2.0.5H_2O$. Crude products can be purified by treatment with dilute acids. Used as calibration standard in Mössbauer spectroscopy. Readily forms solid solns. with $BaTiO_3$ and similar ternary oxides. These materials are much used as dielectric ceramics in electrical capacitors. Heavy white powder or pale grey cubic cryst. Spar. sol. H_2O; sol. HNO_3.

▷ Toxic.

BaO_4Re

Barium rhenate(*VI*) ($BaReO_4$)

Barium rhenium oxide ($BaReO_4$)

[22655-63-6]

$BaReO_4$

M 387.5

Has distorted Scheelite struct. Synth. from ReO_3 and BaO at 1200° and 6.5 x 10^8 atm. Black powder. Dec. at 680° in air.

Shaplygin, I.S. *et al*, *Russ. J. Inorg. Chem. (Engl. Transl.)*, 1980, **25**, 1222 (*synth, props, struct*)

IC-001353

BaO_4S

Barium sulfate ($BaSO_4$)

Sulfuric acid, barium salt (1:1), 8CI. Barosperse. Barotrast. Exophotrast. Oratrast. Trasod. Numerous proprietary names

[7727-43-7]

$BaSO_4$

M 233.3

Manuf. from barite by classical extraction methods. Commercially available. Used for gravimetric determination of barium. Used extensively as an inert filler material. Diagnostic aid (radiopaque medium). White orthorhombic cryst. Undergoes orthorhombic to monoclinic phase transition at 1149°. Spar. sol. H_2O (0.000246 g per 100 cm^3 at 25°; 0.000413 g per 100 cm^3 at 100°). Mp 1580°. ΔH_f° −1473 kJ mol^{-1}; ΔG_f° −1362 kJ mol^{-1}; S° 132 J K^{-1} mol^{-1}.

▷ Toxic. CR0600000

Mineral form [13462-86-7]
Barite. Baryte

Widespread occurrence in hydrothermal deposits. Colourless to greyish, yellowish to deep brown, bluish, greenish, reddish, tabular cryst.

IC-001356

BaO_4W

Barium tungstate(*VI*) ($BaWO_4$)

[7787-42-0]

$BaWO_4$

M 385.1

Scheelite ($CaWO_4$) struct. Synth. by several methods e.g. from alkali metal tungstate solns. by metathetical reactions; fusion of WO_3 with metal oxide or carbonate. Used in oxide cathodes. Insol. H_2O, org. solvs. Mp 1490°.

Rieck, G.D., *Tungsten and its Compounds*, Pergamon, Oxford, 1967, 103.

BaO_6P_2

IC-001357

Barium metaphosphate, 9CI, 8CI

[13762-83-9]

$[Ba(PO_3)_2]_x$

M 295.2

Known in amorphous, cryst. and vitreous forms. Synth. from $BaCO_3$ + $(NH_4)_2HPO_4$ at 465-500°; by heating $Ba(H_2PO_4)_2$ at >500°. Both methods yield amorphous salt which cryst. at ≥600°. Component of optical glasses. Mp 875°.

α-form

The existence of this phase has been questioned. Stated to be formed from β-form at 785°, and from $BaCO_3$ + Na_2CO_3 + H_3PO_4 at 380°. Slender plates or lozenge-shaped cryst.

β-form

Orthorhombic. P—O 143-165 pm and OPO 95-122°. Synth. from $BaCO_3$ + H_3PO_4 at 350°. Colourless prisms with pyramidal tetragonal ends. At 785°, reversibly yields the α-form.

γ-form

Monoclinic. Chains formed of 4 PO_4 tetrahedra sharing corners with P—O 147-163 pm, OPO 97-120°. $Ba^{2\oplus}$ ions are octa coordinated by oxygens in an irregular dodecahedron with Ba—O 269-306 pm. Synth. by the rapid dehydration of $Ba(H_2PO_4)_2$ at 500-600°.

BaS

M 169.3

NaCl struct. Manuf. from $BaSO_4$ by reduction with graphite, coke or natural gas. Prepd. by reduction of $BaSO_4$ with H_2 at 950° for 1 h. Readily converted to BaO_2 by reaction with O_2. Colourless cubic cryst. Moisture-sensitive. Hydrol. in H_2O with formation of $Ba(OH)_2$ and H_2S. Mp 1200°. ΔH_f° −464 kJ mol^{-1}; ΔG_f° −459 kJ mol^{-1}; S° 78 J K^{-1} mol^{-1}.

IC-001363

BaS_2Sn

Barium tin sulfide ($BaSnS_2$)

[50924-36-2]

$BaSnS_2$

M 320.1
Composite BaS/SnS in distorted NaCl structure. Ba is 6-coordinate (distorted O_h). Sn bonded to 3S atoms only. Cations are ordered so that Ba layers alternate with Sn layers. Sn considered distorted T_d with lone pair at one vertex. Synth. from BaS and SnS fired at 750° for 2 weeks. Yellow-orange cryst. or red-orange powder with slight metallic lustre.

BaS_3

Barium sulfide (BaS_3), 9CI

Barium trisulfide

[12231-01-5]

$Ba(S_3)$

M 233.5
Original molecular struct. correct although cryst. parameters subsequently shown to be incorrect. Prepared by passage of $N_2/H_2S/H_2O$ (50:48:2) gas mixture through a bed of $BaSO_3$ at 470°, or by heating a mix. of $BaCS_3$ and S at 550°. Lemon yellow tetragonal cryst. Mp 554°. Dec. at 600° → S + BaS_2.

BaS_3Ta

Barium tantalum sulfide ($BaTaS_3$), 8CI

Barium trisulfidotantalate(IV)

[12009-32-4]

$BaTaS_3$

M 414.4
Hcp has $CsNiCl_3$ struct. *Cf.* Tantalum thallium sulfide ($TaTlS_4$), IC-021900 which contains discrete $TaS_4^{3\ominus}$ ions. Synth. by heating BaS, Ta and S at 600° for 2 weeks then 1000° for 1 week. Semiconductor, activation energy 0.01-0.06eV.

Gardner, R.A. *et al*, *Inorg. Chem.*, 1969, **8**, 2784 (*synth, cryst struct, props*)

IC-001366

$Ba_2CaCu_2O_7Tl$

Barium calcium copper thallium(*III*) oxide ($Ba_2CaCu_2TlO_7$)

Dibarium calcium thallium(III) *dicopper heptoxide*

[117105-30-3]

$(TlO)(BaO)_2Ca(CuO_2)_2$

M 758.2
Tetragonal struct. containing monolayer Tl—O sheets and CuO_2 bilayers. Synth. by solid state reaction of Tl_2O_3, CuO, BaO_2, CuO in sealed quartz tubes at 880°. Superconducting trans. temp. 65-85K. Black.

$Ba_2Cu_4O_8Y$

Barium copper yttrium oxide ($Ba_2Cu_4YO_8$)

[114104-80-2]

$Ba_2Cu_4YO_8$

M 745.7
High-temp. superconductor with transition temp. 80K.

Marsh, P. *et al*, *Nature (London)*, 1988, **334**, 141 (*cryst struct*)
Marshall, A.F. *et al*, *Phys. Rev. B*, 1988, **37**, 9353 (*formn*)

IC-001374

Ba_2EuO_6Ru

Barium hexaoxoruthenateeuropate (Ba_2RuEuO_6), 10CI

Dibarium europium ruthenium hexaoxide. Barium europium ruthenium oxide (Ba_2EuRuO_6)

[63311-08-0]

Ba_2EuRuO_6

M 623.6
Struct. related to Barium lanthanum ruthenium oxide (Ba_2LaRuO_6), IC-001377. Ferromagnetic solid (T_c 42K). Analogues with Ba replaced by Ca or Sr also known. All contain Ru(V).

Gibb, T.C. *et al*, *J. Solid State Chem.*, 1980, **34**, 279 (*mössbauer*)

IC-001375

$Ba_2H_{12}O_{10}Si_4$

Krauskopfite

[15809-38-8]

$Ba_2H_4[SiO_3]_4.4H_2O$

M 655.0
Unbranched, single chain silicate (4 SiO_4 units per chain). Mineral. White cryst.

Coda, A. *et al*, *Atti R. Accad. Naz. Lincei, Rend. Cl. Sci. Fis., Mat. Nat.*, 1967, **42**, 859 (*cryst struct*)
Coda, A., *Rend. Soc. Ital. Mineral. Petrol.*, 1969, **25**, 195.

IC-001376

Ba_2InO_6Ru

Barium hexaoxoindateruthenate (Ba_2InRuO_6), 10CI

Dibarium indium ruthenium hexaoxide. Barium indium ruthenium oxide (Ba_2InRuO_6)

[77938-15-9]

Ba_2InRuO_6

M 586.5
Contains Ru(V). Possesses the hexagonal $BaTiO_3$ struct. Black hexagonal cryst.

Schaller, H.-U. *et al*, *Z. Anorg. Allg. Chem.*, 1981, **473**, 178 (*synth, powder struct*)

IC-001377

Ba_2LaO_6Ru

Barium lanthanum ruthenium oxide (Ba_2LaRuO_6)

Dibarium lanthanum ruthenium hexaoxide. Barium hexaoxoruthenatelanthanate (Ba_2LaRuO_6), *10CI*

[63311-37-5]

Ba_2LaRuO_6

M 610.6
Ordered, distorted perovskite struct.; monoclinic, with A sites occupied by Ba, and B sites showing ordered arrangement of La and Ru. Prepd. by heating BaO_2 or $BaCO_3$ with Ru or RuO_2 and La_2O_3. Potential catalyst for automobile emission control. Analogues with La replaced by Pr, Nd, Sm, Eu, Gd, Dy, Bi, Y or Yb are also known. All contain Ru(V). Catalyzes the following two reactions: $2NO + 2CO \rightarrow N_2 + 2CO_2$, $2CO + O_2 \rightarrow 2CO_2$.

Donohue, P.C. *et al*, *Mater. Res. Bull.*, 1977, **12**, 519 (*synth, struct, use*)

Battle, P.D., *Mater. Res. Bull.*, 1981, **16**, 397 (*rad*)

Ba_2MnS_3 IC-001378

Barium manganese sulfide (Ba_2MnS_3), 8CI

[12589-60-5]

Ba_2MnS_3

M 425.7
Isostructural with Ba_2MnSe_3 and K_2AgI_3. Synth. from BaS, Mn and S in an evacuated ampoule at 1050°. Orange red cryst.

Brink, C. *et al, Acta Crystallogr.*, 1952, **5**, 433 (*synth, struct*)
Grey, I.E. *et al, Inorg. Chem.*, 1971, **10**, 691 (*struct, magnetism*)
Gmelin Handbook Inorg. Chem., Syst. No. 56, 1976, **C6**, 44 (*rev, bibl*)

Ba_2MoO_4 IC-001379

Barium molybdate(*IV*) (Ba_2MoO_4)

Dibarium molybdenum tetroxide

[39416-29-0]

Ba_2MoO_4

M 434.5
Cubic struct. Synth. by reduction of $BaMoO_4$ with H_2. Purple-red solid. Shows metallic behaviour.

Pascal, P., *Nouveau Traité de Chimie Minérale*, Masson, 1976, **5**, 82.

Ba_2MoO_5 IC-001380

Barium molybdate(*VI*) (Ba_2MoO_5)

Barium molybdenum oxide (Ba_2MoO_5)

[54983-00-5]

$Ba_2[MoO_5]$

M 450.5
Quadratic pseudo cubic lattice. Obt. by reaction of $BaMoO_4$ and $BaCO_3$ or Ba_3MoO_6 (solid phase synth.). Mass spectrometric stability of gaseous Ba_2MoO_5 molecules has been studied.

Veksler, S.F. *et al, Zh. Neorg. Khim.*, 1974, **19**, 3224; *CA*, **82**, 67513 (*synth*)
Kudin, L.S. *et al, Izv. Vyssh. Uchebn. Zaved., Khim. Khim. Tekhnol.*, 1982, **25**, 259; *CA*, **96**, 224188 (*ms*)

Ba_2NbO_6V IC-001381

Barium niobium vanadium oxide (Ba_2NbVO_6), 9CI

[12231-47-9]

Ba_2NbVO_6

M 514.4
Cubic struct. related to perovskite with evidence for ordering of Nb(*V*) and V(*III*) and possibly some pairing of V(*III*). Synth. by heating $NbVO_4$ and $Ba(C_2O_4)$ at 1200° in carefully purified He. Black solid. Paramagnetic: there is evidence for antiferromagnetic coupling of V pairs above 400K. Sr_2TaVO_6 is also known.

Chauvel, C. *et al, Compt. Rend. Hebd. Seances Acad. Sci. Sect. C*, 1966, **263**, 1536 (*synth, cryst struct*)
Bernier, J.-C. *et al, J. Solid State Chem.*, 1974, **11**, 265 (*synth, cryst struct, magnetism*)

Ba_2O_4Pb IC-001382

Barium lead(*IV*) oxide (Ba_2PbO_4)

Barium orthoplumbate

[12513-70-1]

Ba_2PbO_4

M 545.8
Synth. from $BaPbO_3$ + Li_2O_2. Tetragonal cryst.

Weiss, R. *et al, Compt. Rend. Hebd. Seances Acad. Sci.*, 1959, **248**, 106 (*synth*)
Vidyasagar, K. *et al, J. Solid State Chem.*, 1985, **58**, 29 (*synth*)
Stoll, H. *et al, Z. Anorg. Allg. Chem.*, 1987, **548**, 165 (*synth, cryst struct*)

Ba_2O_4Ru IC-001383

Barium ruthenate (Ba_2RuO_4), 10CI

Dibarium ruthenium tetraoxide. Barium ruthenium oxide (Ba_2RuO_4)

[11130-93-1]

Ba_2RuO_4

M 439.7
K_2NiF_4 struct. Tetragonal cryst.

Goodenough, J.B. *et al, Prep. Methods in Solid State Chem.*, Academic Press, N.Y., 1972, 1 (*synth, cryst struct*)
Prosychev, I.I. *et al, Russ. J. Inorg. Chem.* (*Engl. Transl.*), 1980, **25**, 489 (*synth*)

Ba_2O_5Re IC-001384

Barium rhenate(*VI*) (Ba_2ReO_5), 12CI

Barium rhenium oxide (Ba_2ReO_5)

[113007-42-4]

Ba_2ReO_5

M 540.8
Isostructural with $K_2VO_2F_3$; contains ReO_4 $O_{2/2}$ octahedra linked by *cis*-bridging O atoms. Interatomic distances: $Re—O_{br}$ 206.9; $Re—O_{term}$ 193.3 pm (av.). Synth. from $Ba_5(ReO_6)_2$ and Re at 800°. Dark grey powder.

Scholder, R. *et al, Angew. Chem., Int. Ed. Engl.*, 1963, **2**, 265.
Cheetham, A.K. *et al, J. Solid State Chem.*, 1987, **71**, 69 (*synth, ir, cryst struct, phases*)

$Ba_2O_5Si_2$ IC-001385

Sanbornite, 9CI

Barium silicate ($Ba_2Si_2O_5$)

[15600-58-5]

$Ba_2[Si_2O_5]$

M 410.8
Mineral. An unbranched single layer silicate. Occurs near Incline, California. Plates.

Rogers, A.F., *Am. Mineral.*, 1932, **17**, 161 (*mineral*)
Douglass, R.M., *Am. Mineral.*, 1958, **43**, 517 (*cryst struct*)
Hesse, K.F. *et al, Z. Kristallogr.*, 1980, **153**, 33 (*cryst struct*)

$Ba_2O_6P_2S_2Se$ IC-001386

Barium bis(phosphonothio) selenide (2:1), 10CI

Barium dithiomonoselenopyrophosphate

[62918-44-9]

$Ba_2[(O)_2P(S)SeP(S)(O)_2]$

M 575.6
Dihydrate: Synth. from $Se(S_2O_2Me)_2$ + Na_3SPO_3 aq. + $Ba(OH)_2$. Needles.

Wagner, H. *et al, Z. Anorg. Allg. Chem.*, 1977, **429**, 270 (*synth, ir*)

Ba_2O_6RhRu IC-001387

Barium hexaoxorhodateruthenate ($BaRhRuO_6$), 10CI

Dibarium rhodium ruthenium hexaoxide. Barium rhodium ruthenium oxide (Ba_2RhRuO_6)

[77908-67-9]

Ba_2RhRuO_6

M 574.6
Contains Ru(*V*). Rhombohedral 9L struct. (*cf.* Barium ruthenium(*IV*) trioxide ($BaRuO_3$), IC-001347). Black cryst.

Schaller, H.-U. *et al, Z. Anorg. Allg. Chem.*, 1981, **473**, 178 (*synth, powder struct*)

Ba_2O_6RuSc IC-001388

Barium hexaoxoruthenatescandate (Ba_2RuScO_6), 10CI

Dibarium ruthenium scandium hexaoxide. Barium ruthenium scandium oxide (Ba_2RuScO_6)

[75036-90-7]

Ba_2ScRuO_6

M 516.6
Contains Ru(*V*). Hexagonal 6L struct. Prepd. as for Barium lanthanum ruthenium oxide (Ba_2LaRuO_6), IC-001377.

Bader, H. *et al, Z. Anorg. Allg. Chem.*, 1980, **466**, 97 (*synth, powder struct*)

$Ba_2O_8Si_3$ IC-001389

Barium silicate ($Ba_4(Si_6O_{16})$)

[14871-82-0]

$Ba_4[Si_6O_{16}]$

M 486.9
Unbranched double chain struct. (3 SiO_4 units long). Cryst.

Hesse, K.-F. *et al, Z. Kristallogr.*, 1980, **153**, 3 (*cryst struct*)

$Ba_2O_{14}Si_4V_2$ IC-001390

Suzukiite, 9CI

[82570-67-0]

$Ba_2V_2[Si_4O_{12}]O_2$

M 712.8
Mineral. A single chain silicate. Occurs at the Mogurazawa mine, Gumma, Japan. Bright green orthorhombic cryst.

Matsubara, S. *et al, Mineral. J.*, 1982, **11**, 15 (*mineral*)

$Ba_2O_{30}P_{10}Zn_3$ IC-001391

Barium zinc metaphosphate ($P_{10}O_{30}^{10\ominus}$) (1:2:3), 11CI

Dibarium trizinc cyclodecaphosphate

[80440-72-8]

$Ba_2Zn_3(P_{10}O_{30})$

M 1260.5
Interconnected $P_{10}O_{30}$ rings, ZrO_4 tetrahedra, ZnO_6 octahedra, and BaO_9 polyhedra. Coordination numbers: Ba 9, Zn 4, 6, and 8. Structure possesses very large channels. Synth. from $BaCO_3$ + ZnO + $(NH_4)_2HPO_4$ or H_3PO_4 at 400-600°. First example of a purified decametaphosphate system.

Bagieu-Beucher, M. *et al, J. Solid State Chem.*, 1981, **40**, 248; 1982, **45**, 159 (*synth, cryst struct*)
Cabello, C.I. *et al, Spectrochim. Acta, Part A*, 1985, **41**, 1359 (*synth, ir, raman*)

Ba_2S_4Sn IC-001392

Barium orthothiostannate

Barium tin sulfide (Ba_2SnS_4)

[12589-70-7]

Ba_2SnS_4

M 521.6
Dimorphic. Tin is tetrahedrally coordinated by S atoms.

Low temp-form
Monoclinic cryst.

High temp-form
Contains two types of distorted tetrahedra. Orthorhombic cryst.

Katuada, M. *et al, J. Inorg. Nucl. Chem.*, 1975, **37**, 2249 (*synth, mössbauer*)
Jumas, J.C. *et al, J. Solid State Chem.*, 1975, **14**, 319 (*cryst struct*)
Neyrand, M. *et al, Rev. Chim. Minér.*, 1975, **12**, 406 (*ir*)
Greatrex, R. *et al, J. Chem. Soc., Dalton Trans.*, 1976, 500 (*mössbauer, synth*)
Philippot, G. *et al, React. Solids*, [*Proc. Int. Symp.*], *8th*, *1976*, 1977, 535 (*ir, mössbauer, cryst struct*)

$Ba_3CaO_9Ru_2$ IC-001393

Barium calcium ruthenate ($Ba_3CaRu_2O_9$), 10CI

Barium calcium ruthenium oxide ($Ba_3CaRu_2O_9$). Tribarium calcium diruthenium nonaoxide

[61504-95-8]

$Ba_3Ru_2CaO_9$

M 798.1
Contains Ru(*V*). Isostructural with Barium magnesium ruthenium(*V*) oxide ($Ba_3MgRu_2O_9$), IC-001397. Made as for Barium magnesium ruthenium(*V*) oxide ($Ba_3MgRu_2O_9$), IC-001397. Antiferromagnetic solid. Semiconductor (E_g 0.43 eV).

Darriet, J. *et al, J. Solid State Chem.*, 1976, **19**, 213 (*synth, cryst struct*)
Drillon, M., *Solid State Commun.*, 1977, **21**, 425 (*magnetism*)
Fernandez, I. *et al, J. Solid State Chem.*, 1980, **34**, 121 (*mössbauer*)

$Ba_3CdO_9Ru_2$ IC-001394

Barium nonaoxocadmatediruthenate ($Ba_3CdRu_2O_9$), 10CI

Tribarium cadmium diruthenium nonaoxide. Barium cadmium ruthenium oxide ($Ba_3CdRu_2O_9$)

[61504-96-9]

$Ba_3Ru_2CdO_9$

M 870.5
Contains Ru(*V*). Isostructural with Barium magnesium ruthenium(*V*) oxide ($Ba_3MgRu_2O_9$), IC-001397. Made as for Barium magnesium ruthenium(*V*) oxide ($Ba_3MgRu_2O_9$), IC-001397. Antiferromagnetic solid.

Darriet, J. *et al, J. Solid State Chem.*, 1976, **19**, 213 (*synth, cryst struct*)
Fernandez, I. *et al, J. Solid State Chem.*, 1980, **34**, 121 (*mössbauer*)

$Ba_3InO_5Ru_2$ IC-001395

Barium nonaoxoindatediruthenate ($Ba_3InRu_2O_9$), 10CI

Tribarium indium diruthenium nonaoxide. Barium indium ruthenium oxide ($Ba_3InRu_2O_9$)

[77938-16-0]

$Ba_3InRu_2O_9$

M 872.9

Mixed valence compd., containing ruthenium(*V/VI*). Possesses the hexagonal $BaTiO_3$ struct. Black hexagonal cryst.

Schaller, H.-U. *et al, Z. Anorg. Allg. Chem.*, 1981, **473**, 178 (*synth, powder struct*)

Ba_3IrLaO_5Ru IC-001396

Barium nonaoxoiridateruthenatelanthanate (BaIrRuLaO$_5$), 10CI

Tribarium lanthanum iridium ruthenium nonaoxide. Barium lanthanum iridium ruthenium oxide ($Ba_3LaIrRuO_9$)

[76130-27-3]

$Ba_3LaIrRuO_9$

M 988.1

Possesses the hexagonal $BaTiO_3$ struct. Black hexagonal cryst.

Dürrschmidt, E. *et al, Z. Anorg. Allg. Chem.*, 1980, **470**, 109 (*synth, powder struct*)

Thumm, I. *et al, Z. Anorg. Allg. Chem.*, 1981, **477**, 161 (*synth, powder struct*)

$Ba_3MgO_5Ru_2$ IC-001397

Barium magnesium ruthenium(*V*) oxide ($Ba_3MgRu_2O_9$)

Tribarium magnesium diruthenium nonaoxide

[12231-80-6]

$Ba_3Ru_2MgO_9$

M 782.4

Possesses the hexagonal $BaTiO_3$ struct. The $Ru^{5\oplus}$ ions occupy the face-shared octahedra; the $Ni^{2\oplus}$ ions occupy the corner-shared octahedra. Prepd. by heating a mixture of $BaCO_3$, MgO and Ru in air at 1200°. Antiferromagnetic solid (T_c = 390K). V. low electrical conductivity. Oxidizes aq. HCl to Cl_2. Ru—Ru 263 pm (within face-shared octahedra).

Donohue, P.C. *et al, Inorg. Chem.*, 1966, **5**, 339 (*synth, cryst struct, reactions*)

Callaghan, A. *et al, Inorg. Chem.*, 1966, **5**, 1572 (*magnetism*)

Ba_3MnO_5 IC-001398

Barium manganese oxide (Ba_3MnO_5)

Barium manganate oxide ($Ba_3(MnO_4)O$)

$Ba_3(MnO_4)O$

M 546.9

Contains tetrahedral $[Mn^{VI}O_4]^{2\ominus}$ anion. Isotypic with Cs_3CoCl_5. Synth. from $BaMnO_3$ or $Ba_3(MnO_4)_2$ and $Ba(OH)_2$ (1:1 ratio) under N_2 at 850°.

Scholder, R., *Angew. Chem.*, 1958, **70**, 583.

Mansmann, M., *Z. Anorg. Allg. Chem.*, 1965, **339**, 52 (*cryst struct*)

Gmelin Handbook Inorg. Chem., Syst. No. 56, 1975, **C2**, 251 (*rev, bibl*)

Ba_3N_2 IC-001399

Barium nitride (Ba_3N_2), 8CI

[12047-79-9]

Ba_3N_2

M 439.9

Prepd. either by high temp. nitridation of barium or by low temp. reaction of N_3 with solns. of Ba in liq. Na. Also formed as a thermal dec. product of $Ba(N_3)_2$. Reacts with Si_3N_4 to form $BaSiN_2$. Deep purple powder. Extremely moisture-sensitive. Reacts with H_2O with formation of $Ba(OH)_2$ and evolution of NH_3. Dec. on heating to form Ba_3N and N_2. Mp 1000°. ΔH_f° = −363 kJ mol^{-1}; ΔG_f° = −292 kJ mol^{-1}; S° 152 J K^{-1} mol^{-1}.

▷ Toxic.

$Ba_3NiO_5Ru_2$ IC-001402

Barium nickel ruthenium(*V*) oxide ($Ba_3NiRu_2O_9$), 8CI

Tribarium nickel diruthenium nonaoxide. Barium nonaoxonickelatediruthenate ($Ba_3NiRu_2O_9$), 10CI

[12231-84-4]

$Ba_3Ru_2NiO_9$

M 816.8

Possesses the hexagonal $BaTiO_3$ struct. The $Ru^{5\oplus}$ ions occupy the face-shared octahedra; the $Ni^{2\oplus}$ ions occupy the corner-shared octahedra. Prepd. by heating a mixture of $BaCO_3$, $NiCO_3$ and Ru in air at 1100°.

Donohue, P.C. *et al, Inorg. Chem.*, 1966, **5**, 339 (*synth, cryst struct*)

Fernandez, I. *et al, J. Solid State Chem.*, 1980, **34**, 121 (*mössbauer*)

Ba_3O_5Ru IC-001403

Barium ruthenium oxide (Ba_3RuO_5)

Barium ruthenate (Ba_3RuO_5), 10CI. Tribarium ruthenium pentaoxide

[73503-53-4]

Ba_3RuO_5

M 593.0

Rhombic cryst.

Prosychev, I.I. *et al, Russ. J. Inorg. Chem. (Engl. Transl.)*, 1980, **25**, 489 (*synth, struct*)

Ba_3O_5Re IC-001404

Barium rhenate(*IV*) (Ba_3ReO_5)

Barium rhenium oxide (Ba_3ReO_5)

Ba_3ReO_5

M 694.1

Ordered distorted perovskite struct. Synth. from $BaCO_3$, $Ba(ReO_4)_2$ and ReO_2 at 800-1000°. Dark grey phase.

Schaider, R. *et al, Angew. Chem., Int. Ed. Engl.*, 1963, **2**, 365 (*synth, props*)

Cheetham, A.K. *et al, J. Solid State Chem.*, 1987, **71**, 61 (*synth, struct, phases*)

$Ba_3O_8P_2$ IC-001405

Barium phosphate ($Ba_3(PO_4)_2$)

Barium phosphate (3:2), 9CI, 8CI. Barium orthophosphate

[13517-08-3]

$Ba_3(PO_4)_2$

M 601.9

Exists in low- and high-temp. stable forms. Also known in vitreous form. Synth. from $BaCO_3$ + MH_2PO_4 at 1100°; $Ba(OH)_2$ + H_3PO_4 at 100°; $BaCl_2$ + KH_2PO_4 aq. When prepared at pH 9-11, product is apatitic in struct. Mp >1620°. With HCl(g) at 700°, gives Barium chloroapatite. Said to be hydrolysable at alk. pH → Barium hydroxyapatite. A phase transition occurs at 715°. *β*-form stable at >1390°; it can be supercooled considerably but cannot be obt. at r.t. by quenching.

Monohydrate: [87896-20-6].

Dehydrates at *ca.* 360°.

Ba_3O_9ReSb IC-001406

Barium antimonate rhenate ($Ba_3(SbO_4)(ReO_5)$)

Nonaoxoantimonaterhenate, barium salt (1:3), 11CI

[81775-31-7]

$Ba_3(ReSbO_9)$

M 863.9

Perovskite related struct. with partially-ordered cationic vacancies. Synth. from BaO, Re_2O_7 + Sb_2O_5 at 600-800° in air. Light yellow cryst.

Kemmler-Sack, S. *et al, Z. Anorg. Allg. Chem.*, 1982, **494**, 173 (*synth, struct, props*)

$Ba_3O_9Re_2$ IC-001407

Barium rhenium oxide ($Ba_3Re_2O_9$)

Barium rhenate(VI) ($Ba_3Re_2O_9$)

[65149-61-3]

$Ba_3Re_2O_9$

M 928.3

Hexagonal struct., sl. Re deficient with two types of octahedral Re sites. Ba 12-coordinate. Re—O 186.1-206.1 pm. Synth. from BaO and ReO_3 at ~6 × 10^3 atm. and 1180°. Cryst. Oxidises slowly in the atm. to $Ba_3(ReO_5)_2$.

$Ba_3O_9RhRu_2$ IC-001408

Barium nonaoxorhodatediruthenate ($Ba_3RhRu_2O_9$), 10CI

Tribarium rhodium diruthenium nonaoxide. Barium rhodium ruthenium oxide ($Ba_3RhRu_2O_9$)

[77908-68-0]

$Ba_3RhRu_2O_9$

M 861.0

A mixed valence compd., containing ruthenium (*V/IV*). Rhombohedral 9 L struct. (*cf.* Barium ruthenium(*IV*) trioxide ($BaRuO_3$), IC-001347). Black crystalline solid.

Schaller, H.-U. *et al, Z. Anorg. Allg. Chem.*, 1981, **473**, 178 (*synth, powder struct*)

$Ba_3O_9Ru_2Sm$ IC-001409

Barium nonaoxodiruthenatesamarate ($BaRu_2SmO_9$), 10CI

Barium ruthenium samarium oxide ($Ba_3Ru_2SmO_9$). Tribarium diruthenium samarium nonaoxide

[79103-31-4]

$Ba_3SmRu_2O_9$

M 908.4

Mixed valence compd. containing ruthenium(*V/IV*). Possesses the hexagonal $BaTiO_3$ struct. Black hexagonal cryst.

Dürrschmidt, E. *et al, Z. Anorg. Allg. Chem.*, 1980, **470**, 109 (*synth, powder struct*)

Thumm, I. *et al, Z. Anorg. Allg. Chem.*, 1981, **477**, 161 (*synth, powder struct*)

$Ba_3O_9Ru_2Sr$ IC-001410

Barium strontium ruthenate ($Ba_3SrRu_2O_9$), 10CI

Tribarium strontium diruthenium nonaoxide. Barium ruthenium strontium oxide ($Ba_3Ru_2SrO_9$)

[61505-00-8]

$Ba_3Ru_2SrO_9$

M 845.7

Contains Ru(*V*). Shows a monoclinic distortion from the struct. of Barium magnesium ruthenium(*V*) oxide ($Ba_3MgRu_2O_9$), IC-001397. Made as for Barium magnesium ruthenium(*V*) oxide ($Ba_3MgRu_2O_9$), IC-001397. Antiferromagnetic solid.

Darriet, J. *et al*, *J. Solid State Chem.*, 1976, **19**, 213 (*synth, cryst struct*)

IC-001412

$Ba_3O_{13}Si_5$

Barium silicate ($Ba_6(Si_{10}O_{26})$)

[12507-96-9]

$Ba_6[Si_{10}O_{26}]$

M 760.4

Unbranched double five-fold chain struct. Cryst. Stable only > 1300°. Below 1300°, dec. to Barium silicate ($Ba_5(Si_8O_{21})$), IC-001425 and $BaSi_2O_5$.

Hesse, K.-F. *et al*, *Z. Kristallogr.*, 1980, **153**, 3 (*cryst struct*)

IC-001413

Ba_3S_5Si

Barium sulfide thiosilicate ($Ba_3S(SiS_4)$)

*Barium silicide sulfide (Ba_3SiS_5). Tribarium tetrathiosilicate(*IV*) sulfide*

[70378-69-7]

$Ba_3S(SiS_4)$

M 600.3

Orthorhombic struct.

Schmitz, D., *Acta Crystallogr., Sect. B*, 1981, **37**, 518 (*cryst struct*)

IC-001414

$Ba_3S_7Sn_2$

Barium tin sulfide ($Ba_3Sn_2S_7$)

Barium thiodistannate

[11071-76-4]

$Ba_3Sn_2S_7$

M 873.8

Monoclinic struct. built up of $Sn_2S_7^{6\ominus}$ anions and $Ba^{2\oplus}$ cations. $Sn_2S_7^{6\ominus}$ results from condensation of $2SnS_4$ tetrahedra with 1 common apex. Coordination of $Ba^{2\oplus}$ relative to S is 8 or 9. Cryst.

IC-001417

$Ba_4Cu_7O_{15}Y_2$

Barium copper yttrium oxide ($Ba_4Cu_7Y_2O_{15}$)

[124365-83-9]

$Ba_4Cu_7Y_2O_{15}$

M 1411.9

High-temp. superconductor with transition temp. 40K.

Border, P. *et al*, *Nature (London)*, 1988, **334**, 596 (*cryst struct*)

IC-001418

$Ba_4NbO_{12}Ru_3$

Barium dodecaoxotriruthenateniobate ($Ba_4NbRu_3O_{12}$), 10CI

Tetrabarium niobium triruthenium dodecaoxide. Barium niobium ruthenium oxide ($Ba_4NbRu_3O_{12}$). Barium niobium ruthenate ($Ba_4Nb(Ru_3O_{12})$)

[73379-43-8]

$Ba_4Nb[Ru_3O_{12}]$

M 1137.4

Contains the $[Ru_3O_{12}]^{13\ominus}$ unit.

Drillon, M. *et al*, *J. Phys. Chem. Solids*, 1980, **41**, 507.

IC-001419

$Ba_4NiO_{12}Re_2$

Barium nickel rhenate(*VII*) ($Ba_4Ni(ReO_6)_2$)

Barium nickel rhenium oxide ($Ba_4NiRe_2O_{12}$). Barium nickel orthoperrhenate

[13598-05-5]

$Ba_4NiRe_2O_{12}$

M 1172.4

Has hexagonal perovskite struct. with cation vacancies. Ba and Ni cations are replaceable in whole or in part by Sr and Co. Synth. from Re and oxides or carbonates at temps. up to 1000°. Cryst.

Herrman, M. *et al*, *Z. Anorg. Allg. Chem.*, 1981, **476**, 115 (*synth, cryst struct, ir, raman, uv*)

IC-001420

$Ba_4O_{12}Ru_3Ta$

Barium dodecaoxotriruthenatetantalate ($Ba_4Ru_3TaO_{12}$), 10CI

Barium ruthenium tantalum oxide ($Ba_4Ru_3TaO_{12}$). Tetrabarium tantalum triruthenium dodecaoxide. Barium tantalum ruthenate ($Ba_4Ta(Ru_3O_{12})$)

[73379-46-1]

$Ba_4Ta[Ru_3O_{12}]$

M 1225.4

Contains the $[Ru_3O_{12}]^{13\ominus}$ unit.

Drillon, M. *et al*, *J. Phys. Chem. Solids*, 1980, **41**, 507.

IC-001421

$Ba_5BrO_{15}Re_3$

Barium bromide rhenate(*VII*) ($Ba_5Br(ReO_5)_3$)

*Bromopentadecaoxotrirhenate(*VII*), barium salt (1:5), 10CI*

[70992-92-6]

$Ba_5(ReO_5)_3Br$

M 1565.1

Contains distorted square pyramidal $ReO_5^{3\ominus}$ anions with Re—O(av.) 182.5pm. Struct. is related to apatite. Synth. from $BaBr_2$ and Re at 800° in air. Clear yellow needles. Other related Ba salts of $[(ReO_5)_3X]^{10\ominus}$ exist where X = halide, nitrate, $\frac{1}{2}$(carbonate).

Baud, G. *et al*, *Mater. Res. Bull.*, 1979, **14**, 675 (*synth, props, cryst struct*)

IC-001422

$Ba_5Ga_2S_8$

Barium thiogallate ($Ba_5(GaS_4)_2$)

Barium tetrathioxogallate(5−) (2:5), 11CI

[89299-15-0]

$Ba_5(GaS_4)_2$

M 1082.6

Synth. from BaGa, Ba and S at 1150°. Colourless moisture-sensitive prisms (melt).

Eisenmann, B. *et al*, *Z. Naturforsch., B*, 1984, **39**, 27 (*synth, cryst struct*)

IC-001423

$Ba_5NO_{18}Re_3$

Barium nitrate perrhenate ($Ba_5(NO_3)(ReO_5)_3$)

*(Nitrato)pentadecaoxotrirhenate, barium (1:5), 11CI. Pentabarium nitratotris(metaperrhenate(*VII*)). Barium rhenium nitrate oxide ($Ba_5Re_3(NO_3)O_{15}$)*

[85941-78-2]

$Ba_5[(NO_3)(ReO_5)_3]$

M 1547.2

Apatite struct. with distorted square-pyramidal ReO_5 groups, with Re—O at 168.1 to 188.9 pm, average 182.6 pm. Synth. from Re and $Ba(NO_3)_2$ at 600° in air. Clear yellow needles.

Aneas, M. *et al*, *Mater. Chem. Phys.*, 1983, **8**, 119 (*synth, cryst struct*)

IC-001424

$Ba_5O_{12}Re_2$

Barium rhenate(*VII*) ($Ba_5(ReO_6)_2$)

*Barium orthoperrhenate ($Na_5(ReO_6)_2$). Barium hexaoxorhenate(*VII*). Barium rhenium oxide ($Ba_5Re_2O_{12}$)*

[13598-09-9]

$Ba_5(ReO_6)_2$

M 1251.0

Has perovskite-related 24 layer struct. Synth. from $Ba(ReO_4)_2$ and $BaCO_3$ at 1200°. Yellow-orange powder.

Longo, J.M. *et al*, *Inorg. Chem.*, 1965, **4**, 235 (*synth, struct*)

IC-001426

$Ba_7Ga_4Sb_9$

Barium gallium antimonide ($Ba_7Ga_4Sb_9$)

[102764-89-6]

$Ba_7Ga_4Sb_9$

M 2335.9

Prepd. from the elements. Cryst. with a metallic lustre.

Cordier, G. *et al*, *Z. Anorg. Allg. Chem.*, 1986, **534**, 137 (*synth, cryst struct*)
Alemany, P. *et al*, *Inorg. Chem.*, 1990, **29**, 3070 (*electronic struct*)

IC-001427

$Ba_7K_2O_{40}Si_{16}$

Barium potassium silicate ($Ba_7K_2(Si_4O_{10})_4$)

[82897-69-6]

$K_2Ba_7[Si_4O_{10}]_4$

M 2128.8

Synthetic unbranched single layer silicate. Struct. comprises infinite Si_2O_5 sheets linked by 8-coord. K and 7- and 9-coord. Ba atoms. Phase in the $K_2O/BaO/SiO_2$ system. Cryst. SiOSi 180°, 163°.

Cervantes-Lee, F.J. *et al*, *Acta Crystallogr., Sect. B*, 1982, **38**, 2099 (*synth, cryst struct*)

$Ba_9FFe_2H_{12}O_{32}Si_{12}Ti_2$ IC-001428

Traskite

[60650-96-6]

$(Ca,Sr)Ba_{24}(Mg,Mn,Fe,Al,Ti)_{16}[Si_2O_7]_6[Si_{12}O_{36}](O,OH)_{30}Cl_6.14H_2O$

M 2323.4

Highly idealised formula given. Unbranched, single ring silicate. (12 SiO_4 tetrahedra per ring). Also formulated as $Ba_9Fe_2Ti_2(SiO_3)_{12}(OH,Cl,F).6H_2O$. Mineral. Brown-red cryst.

Malinovskii, Yu.A. *et al*, *Sov. Phys.-Dokl.* (*Engl. Transl.*), 1976, **21**, 426 (*cryst struct*)

Pararennykh, A.S., *Mineral. Zh.*, 1979, **1**, 3 (*ir*)

$Ba_{10}Ca_2F_{10}MnO_{30}Si_{10}Ti$ IC-001429

Muirite

[12173-99-8]

$Ba_{10}(Ca,Mn,Ti)_4[Si_8O_{24}](Cl,F,O,OH)_{12}.4H_2O$

M 2507.0

Unbranched, single ring silicate with 8 SiO_4 units. Also formulated as $Ba_{10}Ca_2MnTiSi_{10}O_{30}(OH,Cl,F)_{10}$. Mineral, found in sanbornite-bearing metamorphic rocks in California. Orange cryst.

Khan, A.A. *et al*, *Science* (*NY*), 1971, **173**, 916 (*cryst struct*)

Malinovskii, Yu.A. *et al*, *Probl. Kristallologii*, 1976, 143 (*cryst struct*)

Be IC-001430

Beryllium

Glucinium. Glucinum

[7440-41-7]

Be

M 9.0

Atomic No 4. Ground state electron config. $[He]2s^2$. There are 6 isotopes of which only ^9Be is naturally occuring. Discovered in 1797 by L.N. Vauquelin and independently isolated in 1828 by F. Wöhler (Berlin) and A.H.B. Bussy (Paris). Abundance: 2 ppm (earth's crust), 5×10^{-5} ppm (sea water). The α-form (hcp) transforms into β-form (bcc) at 1250°. Main mineral is beryl (emerald). Metal obt. by electrolysis of BeF_2/MF mixt., or of pure $BeCl_2$ or from $BeCl_2$ + K, BeF_2 + Mg. Commercially available. Neutron multiplier in fusion reactors. Used as implant (dopant) in semiconducting devices (GaAs, InP, InAs). Forms alloys with Cu, Ni. Rel. soft silvery-white, lustrous metal; brittle at r.t., ductile at red heat. Unreactive to H_2O and air; dissolves vigorously in dil. acids. Reacts with halogens and higher chalcogens at high temp. Cold conc. HNO_3 passivates Be. Reacts with aq. alkalis → H_2. Mp 1287-1292°. Bp_5 2970° (*ca.* 2500°).

▷ Highly toxic: suspected carcinogen. The powdered metal is a fire and explosion hazard. DS1750000.

$BeCl_2$ IC-001435

Beryllium chloride ($BeCl_2$), 8CI

[7787-47-5]

$BeCl_2$

M 79.9

Prepd. by direct reaction of Be + Cl_2 at 350-400°. Manuf. by treatment of Na_2BeF_4, obtained from a mixt. of beryl ore and Na_2SiF_6 heated to 600-820°,with a chlorinating agent (BCl_3, CCl_4, $COCl_2$, $SiCl_4$). Metallothermic reduction of $BeCl_2$ is used for beryllium manuf. Colourless orthorhombic cryst.; deliquescent. Undergoes transition to high temp. orthorhombic polymorph. at 403°. V. sol. H_2O, EtOH, Et_2O, Py; spar. sol. C_6H_6, $CHCl_3$, CS_2; insol. NH_3, Me_2CO. Mp 415°. Bp 520°. ΔH_f° −496 kJ mol^{-1}; ΔG_f° −450 kJ mol^{-1}; S° 75.8 J K^{-1} mol^{-1}.

▷ Highly toxic; suspected carcinogen. DS2625000.

Tetrahydrate: [13466-27-8].

$BeCl_2H_8O_4$ M 151.9

Cryst. (aq. soln.). Readily loses two H_2O molecules to form dihydrate at 60°. Layered struct. built up from $BeCl_2.2H_2O$ moieties with spaces filled with H_2O molecules.

▷ DS2675000.

Tetraammine complex:

$BeCl_2H_{12}N_4$ M 148.0

Colourless orthorhombic cryst.; dec. on heating with NH_3 loss forming $BeCl_2$.

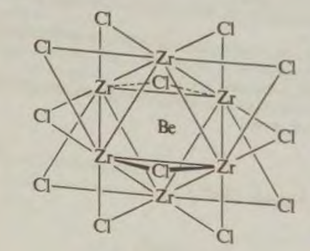
$BeCl_{12}Zr_6$ IC-001436

(Beryllium)dodeca-μ-chlorohexazirconium

Beryllium zirconium chloride ($BeZr_6Cl_{12}$)

[96929-11-2]



one Cl not shown

M 981.7

Isol. as complex with KCl in which zirconium clusters are linked by chloride bridges. Primarily indexed as $Cl_{13}Zr_6^{3\ominus}$ in CAS.

KCl complex: [96929-12-3]. *Beryllium potassium dodeca-μ-chlorochlorohexazirconate(3−), 11Cl*

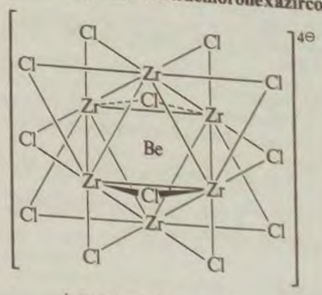
$BeCl_{13}KZr_6$ M 1056.3

Synth. by heating $ZrCl_4$ + Zr + Be + KCl in a sealed Ta tube at 700-860° for 2-3 weeks. Red-brown solid.

Ziebarth, R.P. *et al*, *J. Am. Chem. Soc.*, 1985, **107**, 4571 (*synth, cryst struct*)

$BeCl_{16}Zr_6^{4\ominus}$ IC-001437

(Beryllium)dodeca-μ-chlorotetrachlorohexazirconate(4−)



4 terminal Cl not shown

M 1123.5 (ion)

Indexed as a $Cl_{16}Zr_6^{4\ominus}$ cluster by CAS.

Tetra-Na salt: [96929-25-8]. *Beryllium tetrasodium dodeca-μ-chlorotetrachlorohexazirconate(6−), 11Cl*

$BeCl_{16}Na_4Zr_6$ M 1215.5

Synth. from Zr, $ZrCl_4$, NaCl and Be in a sealed Ta capsule at 700-860°. Black cryst. Struct. descr. as distorted M_6X_{12} version of $(Mo_6Cl_8)Cl_4$ struct.

Ziebarth, R.P. *et al*, *J. Am. Chem. Soc.*, 1985, **107**, 4571 (*synth, struct*)

$BeFe_3H_2O_{11}Si_3$

IC-001440

Beryllium iron hydroxide silicate ($BeFe_3(OH)_2(Si_3O_9)$)

[12449-14-8]

$Fe_3Be[Si_3O_9](F,OH)_2$

M 438.8

$F^\ominus$ and $OH^\ominus$ ions are interchangeable. Synthetic, unbranched, single chain silicate (wollastonite-like Si—O chain based on Fe). Obt. by hydrothermal treatment of Be by HF or AlF_3 with Fe leached from the autoclave walls. Transparent copper-yellow cryst.

Bakakin, V.V. *et al*, *Kristallografiya*, 1969, **14**, 1063; 1970, **15**, 1144; *Sov. Phys. Crystallogr. (Engl. Transl.)*, 1970, **14**, 920; 1971, **15**, 999 (*cryst struct*)

BeH_2O_2

IC-001441

Beryllium hydroxide ($Be(OH)_2$), 8CI

[13327-32-7]

$Be(OH)_2$

M 43.0

Orthorhombic, struct. resembles ε-$Zn(OH)_2$. Freshly precipitated $Be(OH)_2$ is an amorph. jelly-like material which is transformed with time into a much less sol. modification. Hydrol. of beryllium(*II*) in aq. salt solns. results in the formation of $Be_2(OH)^{3\oplus}$, $Be_3(OH)_3^{3\oplus}$ and $Be_5(OH)_7^{3\oplus}$ species. Prep. by hydrol. of $Be^{2\oplus}$ salts in aq. $[NH_4]Cl$ or NaCl soln. Colourless orthorhombic cryst. Dec. on heating with H_2O loss forming BeO (>1000°). Pract. insol. H_2O (3 × 10^{-5} g per 100 cm^3 at 25°). ΔH_f° −906 kJ mol^{-1}, ΔG_f° −818 kJ mol^{-1}; S° 50 J $K^{-1}mol^{-1}$.

▷ Highly toxic; suspected carcinogen. DS3150000.

Dihydrate: [65860-57-3].
BeH_6O_4 M 79.0
Colourless cryst., dec. on heating with H_2O loss.

Beryllium oxide (BeO)

[1304-56-9]

BeO

M 25.0

Deformed wurtzite struct. type. Prepd. by calcination of $Be(OH)_2$ or $BeSO_4$ or by oxidation of beryllium metal powders. Commercially available. Used in production of ceramics, particularly in combination with silicon carbide, silicon nitride. Used in thermoluminescent dosimeters. Extensively used as a refractory material. White hexagonal cryst. Piezoelectric and pyroelectric. Undergoes hexagonal to tetragonal transition at 2100°. Dissolves in conc. H_2SO_4 and in fused KOH. Spar. sol. H_2O (2 × 10^{-5} g per 100 cm^3 at 30°). Mp 2507°. Bp *ca.* 3900°. ΔH_f° −608 kJ mol^{-1}; ΔG_f° −579 kJ mol^{-1}; S° 13.8 J K^{-1} mol^{-1}.

▷ Highly toxic, suspected carcinogen. DS4025000.

Mineral-form [13598-21-5]
Bromellite
Mineral found in calcite veinlets at sites in Sweden and USSR. Transparent, white trigonal cryst.

BeO_4S

IC-001447

Beryllium sulfate ($BeSO_4$)

Sulfuric acid, beryllium salt, 8CI

[13510-49-1]

$BeSO_4$

M 105.0

Struct. resembles BPO_4. Prepd. by thermal dehyd. of the tetrahydrate *in vacuo*. Cyclocondensation catalyst for conversion of anilines to indoles. Colourless tetragonal cryst., hygroscopic. Undergoes polymorphic transitions at 590° and 635°. On further heating dissoc. without melting to BeO, SO_3, SO_2 and O_2. Insol. H_2O. ΔH_f° −1201 kJ mol^{-1}; ΔG_f° −1089 kJ mol^{-1}; S° 78 J K^{-1} mol^{-1}.

▷ Highly toxic, suspected carcinogen. DS4800000.

Monohydrate: [14214-99-4].
Dihydrate: [14215-00-0].
Tetrahydrate: [7787-56-6]. *Tetraaquaberyllium(2+) sulfate*
BeH_8O_8S M 177.1
Synth. by cryst. from an aq. soln. of $BeSO_4$ obt. by careful neutralisation of BeO or $Be(OH)_2$ with aq. H_2SO_4. Commercially available. Colourless tetragonal cryst. dec. on heating with H_2O loss (−$2H_2O$ at 200°, −$4H_2O$ at 400°). V. sol. H_2O (42.5 g per 100 cm^3 at 25°; 100 g per 100 cm^3 at 100°). Comprises $[Be(H_2O)_4]^{2\oplus}$ cations + $SO_4^{2\ominus}$ anions. Piezoelectric. ΔH_f° −2424 kJ mol^{-1}; ΔG_f° −2081 kJ mol^{-1}; S° 234 J K^{-1} mol^{-1}.

▷ Highly toxic; suspected carcinogen. DS5000000.

IC-001449

$Be_2Ca_2Fe_3H_2Mg_2O_{24}PbSi_6$

Joesmithite, 9CI

[12417-03-7]

$Be_2Ca_2(Ca,Pb)(Fe,Mg)_2[SiO_4]_2[Si_2O_6]_2O_2(OH)_2$

M 1076.0
Mineral. Struct. resembles an amphibole but is a hybrid consisting of $[Si_2O_6]_\infty$ pyroxene chains and $[SiO_4]$ tetrahedra. Also formulated as (Ca,Pb) $Ca_2(Mg,Fe^{II},Fe^{III})_5Si_6Be_2O_{22}(OH)_2$. Found at Långban, Sweden in hematite-magnetite-chefferite skarn assemblage. Black prisms with pale brown streak.

Moore, P.B., *Mineral. Mag.*, 1968, **36**, 876 (*cryst struct*)
Moore, P.B., *Am. Mineral.*, 1969, **54**, 577 (*mineral*)

IC-001450

$Be_2Ca_3H_2O_{12}Si_3$

Aminoffite

Beryllium calcium hydroxide silicate ($Be_2Ca_3(OH)_2(Si_3O_{10})$)

[12251-61-5]

$Be_2Ca_3[Si_3O_{10}](OH)_2$

M 416.5
Unbranched oligosilicate (3 SiO_4 tetrahedra per unit). Mineral, found at sites in Sweden and USSR. Colourless to pale yellow transparent cryst.

Coda, A. *et al*, *Atti R. Accad. Naz. Lincei, Rend. Cl. Sci. Fis., Mat. Nat.*, 1967, **43**, 225 (*cryst struct*)

Be_2GeO_4

Beryllium germanate (Be_2GeO_4)

Beryllium germanium oxide (Be_2GeO_4)

[12232-39-2]

Be_2GeO_4

M 154.6
Phenakite struct. Solid.

Schutz, W., *Z. Phys. Chem., Abt. B*, 1936, **31**, 292 (*struct*)

IC-001453

$Be_2H_2Na_2O_{16}Si_6$

Eudidymite, 9CI

[16224-19-4]

$Na_2Be_2[Si_6O_{15}].H_2O$

M 490.5
Mineral. Dimorphous with epididymite. A double chain silicate. Also formulated as $NaBeSi_3O_7(OH)$. Occurs in nepheline-syenite pegmatites in Norway, Greenland and USSR in assoc. with dimorph. Usually white or colourless monoclinic cryst.

Dimorph.-form [15038-95-6]
Epididymite
Double-chain silicate. Brittle orthorhombic cryst., usually white.

[37349-75-0, 60867-27-8]

Robinson, P.D. *et al*, *Am. Mineral.*, 1970, **55**, 1541 (*cryst struct, epididymite*)

$Be_2Na_2O_9Si_3$

Beryllium sodium silicate ($Be_2Na_2(Si_3O_9)$)

[80777-49-7]

$Na_2Be_2[Si_3O_9]$

M 292.2
Synthetic, unbranched, monocyclosilicate. (3 SiO_4 tetrahedra per ring). Known since ~1890. Orthorhombic. Transparent colourless cryst.

Grinderow, D. *et al*, *Acta Crystallogr., Sect. B*, 1982, **38**, 62 (*cryst struct*)

Be_2O_4Si

Beryllium silicate (Be_2SiO_4) **IC-001457**

Beryllium orthosilicate

[15191-85-2]

$Be_2[SiO_4]$

M 110.1
Synth. by heating SiO_2 + BeO to 1500° in the presence of a mineralising agent. Cryst. Dec. >1560°→ BeO + SiO_2.

▷ VV8925000.

Mineral-form [13598-00-0]
Phenakite. Phenacite
Be_2O_4Si M 110.1
Structural prototype with 4-coord. Be. Occurs in granite pegmatites, greisens, hydrothermal and Alpine veins, in many localities. Colourless, yellow, pink, pinkish red, brown, trigonal cryst.

Bi IC-001464

Bismuth

[7440-69-9]

Bi

M 208.9

Atomic No. 83. Ground state electron config. [Xe] $4f^{14}5d^{10}6s^26p^3$. The only stable isotope is ^{209}Bi. Early history confused with that of Pb, Sn, Sb, Ag, but known in Middle Ages. Abundance: 0.008 ppm (earth's crust). Polymorphic. Occurs mainly as Bismuth oxide (Bi_2O_3), IC-001548 and Bismuth sulfide (Bi_2S_3), IC-001561. Heating oxide (Bi_2O_3) with KCN → metal. Isol. as by-product from Pb, Zn, Sn and Cu smelting processes. Used mainly in low melting metal alloys and in the manuf. of pharmaceutical compds. Reacts directly with halogens, O, or S. Attacked only slowly by HCl. Hot H_2SO_4 → sulfate, HNO_3 → nitrate + N oxides.

▷ EB2600000.

α-form

Rhombohedral lattice with Bi—Bi 307.2 (three nearer coplanar neighbours) and 352.9 pm, and BiBiBi 95.5°. Brittle, white cryst. metal with pinkish tinge, becoming plastic at 225°. Mp 271.4°. Bp 1564°.

High-pressure I-form

Monoclinic lattice. From α-Bi at 2.5×10^4 atm.

High-pressure II-form

Lattice form unknown. From the monoclinic form at 2.7×10^4 atm.

BiBrS IC-001466

Bismuth bromide sulfide (BiBrS), 8CI

Bromothioxobismuthine, *9CI. Bromothioxobismuth*(III)

[14794-86-6]

BrBi=S

M 320.9

Orthorhombic. Each Bi atom is 7 coordinated by S (×3; 260.7-272.1 pm) and Br (×4; 303.3-353.9 pm). The Br and two S atoms are at vertices of a triangular prism. The third S is at apex of pyramid whose base is S_2Br_3 face of the triangular prism. The composite polyhedron is linked to another by a common S—S edge forming double chains of $(Bi_2S_4Br_2)_n$. Synth. from Bi + S + $BiBr_3$ at 530°; or from $BiBr_3$ + Bi_2S_3 at 460°. Red-brown (dark red) prisms or needles with metallic sheen. Mp 450°. Ferroelectric: photoconductor. At 300° loses $BiBr_3$, eventually forming Bi_2S_3 at 500°.

$BiBr_3$ IC-001469

Bismuth(*III*) bromide ($BiBr_3$)

Tribromobismuthine, *9CI. Tribromobismuth*(III). *Bismuth tribromide*

[7787-58-8]

$BiBr_3$

M 448.6

Polymorphic. Appears to be the only Group *V* trihalide which possesses molecular and polymeric structs. In vap., Bi—Br 263 pm, BrBiBr 100°. Synth. from BBr_3 + $BiCl_3$ or Bi_2O_3; Bi + Br_2; Br_2 + Bi_2S_3; Bi_2O_3 + CBr_4. Orange or golden-yellow deliquescent cryst. Melts to yellow to red liq. Vap. deep red. Mp 218°. Bp 441°, Bp 462°. Hydrol. (H_2O) to Bismuth bromide oxide (BiBrO), IC-001465, ΔH_f° −276 kJ mol^{-1}. Forms many complex halides with metal halides and hydrogen halides.

Mesitylene complex *(1:1)*: [18796-86-6]. *Tribromo(1,3,5-trimethylbenzene)bismuth*(III)
$C_9H_{12}BiBr_3$ M 568.8

Yellow solid. Mp 118°.

Hexamethylbenzene complex *(2:1)*: [110296-10-1]. *(Hexamethylbenzene)bis[tribromobismuth*(III)*]*
$C_{12}H_{18}Bi_2Br_6$ M 1059.6

Tetragonal yellow cryst. solid. Mp 162° dec.

α-form

Molecular. Monoclinic with trigonal-pyramidal geometry; Bi—Br 266 (3×), 332 (3×) pm. Also described as hcp Br atoms with Bi atoms in octahedral spaces. Transforms into β-form at 158°.

β-form

Monoclinic. Polymeric struct. with Bi—Br 282 pm.

BiClO

Bismuth chloride oxide (BiClO)
Chlorooxobismuthine, 9Cl. Chlorooxobismuth(III). *Bismuthyl chloride. Basic bismuth chloride. Bismuth oxychloride. C.I. Pigment white 14. C.I. Pigment white 31*
[7787-59-9]

BiClO

M 260.4
Tetragonal. Complex layer-lattice with Bi—O 231, Bi—Cl 307 pm. Alternate sheets of O and Cl atoms, with Bi atoms between. Each Bi is surrounded by 4 Cl's and 4O's with another Cl situated beyond centre of the large square face of the antiprism. Synth. from a basic bismuth nitrate and NaCl soln., or by diln. of conc. aq. $BiCl_3$ soln. Commercially available. Used in pigments, as artificial pearl. Formerly used in cosmetic preparations and as an antisyphilitic. Colourless fine powder or cryst. (platelets). V. sl. sol. H_2O; sol. dil. HCl, HNO_3. Mp 232°. Bp 447°. Sometimes known as Flake White, Bismuth White and Pearl White; these names also used for Bismuth nitrate oxide, IC-001515. In N_2, loses $BiCl_3$ at 570° to form, initially, $Bi_4O_5Cl_2$.

BiFO — IC-001487

Bismuth fluoride oxide (BiFO)
Fluorooxobismuthine, 9CI. Fluorooxobismuth(III). *Bismuthyl fluoride. Basic bismuth fluoride*
[13520-72-4]

$$BiFO$$

M 243.9

Tetragonal. Complex layer-lattice in which Bi is 9 coordinated with 4 oxygens and 4 fluorines forming a deformed square antiprism, and one fluorine is situated outside largest square face. Synth. from Bi_2O_3 + or from BiF_3 in sealed tube at 650°; or from $Bi(OH)_3$ + HF aq. with final dilution. White solid.
Mineral-form [24503-04-6]
Zavaritskite
Newly identified from Czechoslavkia.

Aurivillius, B., *Acta Chem. Scand.*, 1964, **18**, 1823 (*cryst struct*)

$BiFO_7Te_3$ — IC-001488

Bismuth fluoride tellurate, 9CI
[57572-07-3]

$$BiF(Te_3O_7)$$

M 722.7
α-phase is cubic. Synth. from Bi_2O_3 + BiF_3 + TeO_2 at 650°. Solid.

Meunier, G. *et al*, *Compt. Rend. Hebd. Seances Acad. Sci. Sect. C*, 1975, **281**, 367 (*synth, cryst struct*)

BiF_3 — IC-001489

Bismuth(*III*) fluoride (BiF_3)
Trifluorobismuthine, 9CI. Trifluorobismuth(III). *Bismuth trifluoride*
[7787-61-3]

$$BiF_3$$

M 265.9
Essentially an 8-coordinated struct. with some ionic character. Polymorphic. Synth. from $Bi(OH)_3$ or Bi_2O_3 + HF. Heavy white (grey when impure) cryst. powder. Insol. H_2O. Mp 725-730° (649°). Bp 900°. ΔH_f° −900 kJ mol^{-1}. Forms many complex halides with metal halides and hydrogen halides as well as with other halides of Group *V* elements.

α-form
Cubic. Should have coordination number 8, but this is decreased to 7 by displacement of Bi, and the fluorine polyhedron becomes a monocapped trigonal antiprism. At 200° converted into β-form.

β-form
Struct. comprises tricapped trigonal prism, with Bi coordinated by 9 fluorines, with Bi—F 221.7-250.2 (8 ×) and 310.0 (1 ×) pm.

γ-form
Orthorhombic with Bi—F 230.5-250.3 (8 ×) and 310.5 (1 ×) pm. Synth. from Bismuth chloride oxide (BiClO), IC-001475 + HF at 300°.

δ-form
Tetragonal. Synth. from γ-form by shock compression at *ca.* 5-7 × 10^3 atm. at 20°.

Gmelin Handbook Inorg. Chem., Syst. No. 19, *Suppl. Vol.*, 1964, 659 (*rev, bibl*)

BiF_4H_4N — IC-001490

Ammonium tetrafluorobismuthate

$$[NH_4^{\oplus}][BiF_4^{\ominus}]$$

M 303.0
Infinite layer struct. formed by edge- and face-sharing of polyhedra formed by the coordination of each Bi by nine F's. Interatomic distances: Bi—F 219-286 pm. Phys. props. not reported.

Aurivillius, B. *et al*, *Acta Chem. Scand.*, 1964, **18**, 1554 (*cryst struct*)

BiF_4K — IC-001491

Potassium tetrafluorobismuthate(*III*)(1−), 10CI
Bismuth potassium fluoride (*$BiKF_4$*)
[62389-76-8]

$$KBiF_4$$

M 324.0
Complex polymorphic system with α, β, β′, and γ phases recognised. Synth. from BiF_3 + KF at 280°. White solid. Forms a hexahydrate.

α-form
Low temp.-form
Synth. by annealing β-form at 250°. Equilibriates with β′-form.

β-form
Direct synth. (admixed with γ-form) from BiF_3. Also by annealing the γ-form at 25°. A fast ion conductor.

γ-form
By direct synthesis from BiF_3 when admixed with β-form.

IC-001493

BiF_4Tl

Thallium(*I*) tetrafluorobismuthate(*III*)

[62389-78-0]

$Tl[BiF_4]$

M 489.3

Two forms: low temp. α-form isostructural with $PbCl_2$, and high temp. β-form has fluorite struct. Obt. from TLF + BiF_3 in liq. HF. Fluoride solid electrolyte.

▷ Highly toxic.

Lucat, C., *Mater. Res. Bull.*, 1977, **12**, 145.
Lucat, C. *et al*, *J. Solid State Chem.*, 1979, **29**, 373.

IC-001494

BiF_5

Bismuth fluoride (BiF_5), 9CI, 8CI

Bismuth(V) *pentafluoride. Pentafluorobismuth*(V)

[7787-62-4]

BiF_5

M 303.9

Polymeric tetragonal structure in solid with BiF_6 octahedra connected in infinite *trans*-chains with Bi—F 190 (4×), 211 (2×) pm. At least oligomeric in vap. Synth. from BiF_3 + F_2 at 500°. Powerful fluorinating agent. In combination with other fluorides e.g. K_2NiF_6, forms useful solid for the 'storage' and generation of F_2. Useful for removal of H_2O in HF preparations. Long white needles. V. sensitive to moisture. Sol. FSO_3H. Mp 154°. Bp 230°. Reacts with other metal fluorides e.g., under F_2 at 280° to give complex fluorides e.g. $MBiF_6$. Weaker Lewis acid than SbF_5.

▷ Highly toxic, mucous membrane irritant. Reacts explosively with H_2O, liberating O_3 and OF_2.

$BiF_{10}Sb$

μ-Fluoropentafluoro(tetrafluoroantimony)bismuth, 11CI

Bismuth(V) *fluoride-antimony*(V) *fluoride adduct (1:1). Antimony bismuth fluoride* (*BiSbF*$_{10}$)

[95780-61-3]

$F_5BiFSbF_4$

M 520.7

Probably *trans*-bridged, covalent, polymeric or tetrameric struct. Synth. from BiF_5 + SbF_5 in WF_6.

Chen, G.S.H. *et al*, *J. Chem. Soc., Dalton Trans.*, 1985, 9 (*synth, ir, raman, struct*)

IC-001498

$BiF_{15}Sb_2$

Antimony bismuth fluoride ($BiF_{15}Sb_2$), 11CI

Bismuth(V)*fluoride-antimony*(V)*fluoride adduct (1:2)*

[12232-91-6]

$BiF_5(SbF_5)_2$

M 737.4

Struct. thought to comprise 1:1 mixt. of $BiF_5(SbF_5)_3$ and $(BiF_2SbF_5)_2$ tetramers. See also Antimony bismuth fluoride ($BiF_{20}Sb_3$), IC-001499. Synth. from SbF_5 + BiF_5 in WF_6. Clear, colourless cryst. Mp 42-43°. Thermally stable up to 100°.

Chen, G.S.H. *et al*, *J. Chem. Soc., Dalton Trans.*, 1985, 9 (*synth, ir, raman, ms, cryst struct, phase diagram*)

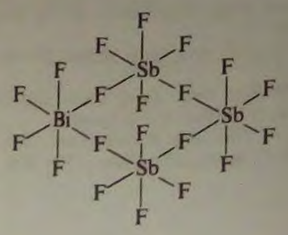
IC-001499

$BiF_{20}Sb_3$

Antimony bismuth fluoride ($BiF_{20}Sb_3$), 10CI

Tris(pentafluoroantimony)(pentafluorobismuth). Bismuth(V) *fluoride-antimony*(V)*fluoride adduct (1:3)*

[62046-99-5]



M 954.1

Formulated as $BiF_5(SbF_5)_3$. *Cis*-bridged struct. is analogous to that of SbF_5 in solid state. Synth. from BiF_5 + SbF_5 in WF_6. Well-defined, colourless cryst. Sol. WF_6. Mp 38-39°. Stable at 100° in sealed tube.

Chen, G.S.H. *et al*, *J. Chem. Soc., Dalton Trans.*, 1985, 9 (*synth, ir, raman, ms, cryst struct, phase diagram*)

$BiHI_4$ IC-001500

Hydrogen tetraiodobismuthate(*III*)(1−), 9CI, 8CI

$H[BiI_4]$

M 717.6

Salts synth. from BiI_3 + amine + HI aq. Acid from BiI_3 and HI aq. Salts are sol. MeOH, MeCN, Me_2CO. Insol. C_6H_6, $CHCl_3$, CCl_4. Dilution of aq. solns. gives BiOI.

Tetrahydrate: Rhomb. pyramidal cryst.
Diisopropylamine salt: Deep red cryst. Mp 182-186°.
Tripropylamine salt: [19454-29-6].
Dark red cryst. (Me_2CO/HI aq.).
2-Methylpyridine salt: [18639-73-1].
Dark red cryst. (Me_2CO/HI aq.). Mp 199-201°.
Octahedral packing of iodines around two pairs of iodine bridges linking neighbouring Bi atoms results in infinite chain struct. Isomorphous with tetrabromo salt.

BiH_3 IC-001501

Bismuthine, 9CI, 8CI

Bismuth(III) *hydride. Bismuth trihydride*

[18288-22-7]

BiH_3

M 212.0

Well characterised as organic derivs. Synth. from $BiCl_3$ + $LiBH_4$ or $LiAlH_4$. Also by dec. (at −45°) of (di) methylbismuthine. Extremely unstable gas or liq. Mp −67°. Bp 16.8° (extrap.). ΔH_f° 277.8 kJ mol^{-1}. Ligand for Cr, Co, Fe, Mo and W.

▷ Presumed toxic.

BiI

Bismuth(*I*) iodide (BiI), 8CI

Iodobismuthylene, 9CI

[18933-08-9]

BiI

M 335.8

Detected in vap. over Bi—BiI_3 melts. Three modifications known. The α- and β- forms may be mixed valence compds. based on Bi_4I_4. Synth. by passing BiI_3 vap. over Bi(l) at 500°, or by dec. of BiI_3 at 700°, or from Bi + HgI_2. Black cryst.

α-form

Monoclinic. Characterised by 1D infinite chain of $[Bi_4I_4]$ units, with Bi atoms in two different environments. Interatomic distances: Bi—Bi 304.5, Bi—I 313.9 pm. Stable at <100°.

β-form

Monoclinic. Struct. generally as for α-form. Interatomic distances: Bi—Bi 304.5, Bi—I 313.5 pm. Obt. from the α-form at >100°.

γ-form

Monoclinic. Stable form at > *ca.* 290°. At *ca.* 310° dec. → BiI_3.

M 279.9

Ilmenite struct. Synth. from Bi_2O_3 + Na_2O_2, or from Na_2O + O_2. Powerful oxidant commercially available. Oxidises phenols; acyloins (→ α-diketones), and cleaves *vic*-diols. Oxidatively cleaves α-amino- and α-hydroxy-carboxylic acids. Used in inorg. analysis e.g. conversion of Mn to permanganate. Yellow to yellow-brown solid. Dec. at 400° → Na_2O + α-Bi_2O_3.

▷ VZ1750000.

Hydrate: Fine yellow needles. Variable water content, may be $2H_2O$, or $5H_2O$ but generally $3.5H_2O$. Dihydrate loses $1H_2O$ at 177°, and $1H_2O$ at 267°.

IC-001518

BiO

Bismuth oxide (BiO), 9CI, 8CI

BiO

M 224.9

Polymeric-form [1332-64-5]

Obt. by dec. of Bi oxalate at 208° *in vacuo*. Black powder. In air, gives Bi_2O_3. Rhombohedrally distorted zinc blende struct. with both Bi and O exhibiting tetrahedral coordination. Bi—Bi bonds ⩾ 388; Bi—O 267-295 pm.

Dimeric-form [39326-72-2]

Bi_2O_2 M 449.9

Detected in Bi—O_2 system at *ca.* −250°. Believed to have planar 4-membered ring of Bi_2O_2.

Zav'yalova, A.A. *et al, Kristallografiya*, 1965, **10**, 480; *Sov. Phys. Crystallogr. (Engl. Transl.)*, 1965, **10**, 401 (*ed*)

IC-001520

BiO_4P

Bismuth phosphate ($BiPO_4$)

[10049-01-1]

$BiPO_4$

M 303.9

Synth. from Bi_2O_3 + P_2O_5 or $NaPO_3$ at melt, or from $Bi(NO_3)_3$ + H_3PO_4 or Na_3PO_4. Has been employed in extraction of plutonium. Known with monazite-type struct. (stable over wide temp. range); a monoclinic high temp. form which slowly converts at r.t. into the monazite-type.

$BiPS_4$

Bismuth(3+) phosphorotetrathioate, 9CI

Bismuth(III) *tetrathiophosphate. Bismuth thiophosphate. Phosphorotetrathioic acid, Bi(3+) salt (1:1)*

[30009-57-5]

$BiPS_4$

M 368.2

Synth. from Bi + S + P/I_2. Orthorhombic. Network of S tetrahedra every second of which is occupied by a P atom. S-tetrahedra share edges in parallel chains. 6 or 8-coordination around Bi and S. Bi—S 268-330, P—S 200-208 pm, SPS 104.9-115.6°. Dark red prisms with metallic grey lustre, or red powder. Electrically conducting. In N_2 at 450° gives Bi_2S_3 + $'P_2S_5'$. In O_2 at 400-800°, gives $BiPO_4$.

IC-001529

BiTe

Bismuth telluride (BiTe), 9CI, 8CI

[12010-57-0]

BiTe

M 336.5
Polymeric struct. based on cubic packing with layers.
Synth. from Bi + Te at 800°; or from Bi + PbTe.
Dissociation energy 228.5 kJ mol^{-1}.

Mineral-form [69257-36-9]
Tsumoite
Found at site near Hiroshima in Japan. Trigonal silver-white metallic cryst.

[BiTh]

Thorium bismuth
Bismuth thorium

Thorium bismuthide (***Th_2Bi***) [77681-57-3]
$BiTh_2$ M 673.0
Studied as heat transfer agent for nuclear reactors, and for sepn. of rare earths from Bi. ΔH_f −62.7 kJ mol^{-1}.

Thorium bismuthide (***Th_5Bi_3***) [83619-19-6]
Bi_3Th_5 M 1787.1
Isostructural with Mn_5Si_3. ΔH_f −63 kJ mol^{-1}.

Thorium bismuthide (***ThBi***) [12409-35-7]
BiTh M 441.0
NaCl struct. ΔH_f −81.1 kJ mol^{-1}.

Thorium bismuthide (***Th_3Bi_4***) [12409-51-7]
Bi_4Th_3 M 1532.0
Isostructural with Th_3P_4. ΔH_f −79.4 kJ mol^{-1}.

Thorium bismuthide (***$ThBi_2$***) [12409-39-1]
Bi_2Th M 649.9
Isostructural with Cu_2Sb, UBi_2, $ThAs_2$ $ThSb_2$. ΔH_f −69 kJ mol^{-1}.

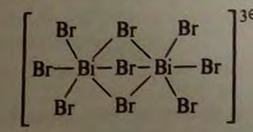
$Bi_2Br_9^{3\ominus}$

Tri-μ-bromohexabromodibismuthate(3−), 8CI
Nonabromodibismuthate(III)(*3*−)



M 1137.0 (ion)

Tris-Me_4N salt: [15809-67-3].
$C_{12}H_{36}Bi_2Br_9N_3$ M 1359.5
Synth. from Me_4NBr + $BiBr_3$ in HBr(aq.). Hexagonal air-stable yellow cryst. Anions consist of face-sharing $BiBr_6$ octahedra. Interatomic distances: Bi—Br_{br} 306; Bi—Br_{term} 272 pm; angle: $BiBrBi_{br}$ 82.5°.

Tris-Et_4N salt: [30335-20-7].
Synth. from $[Et_4N]Br$ + $BiBr_3$ in HBr aq. Solid. Dec. at 295°.

Tris-Ph_4P salt: [64164-19-8].
Synth. from $[Ph_4P]Br$ + $BiBr_3$ in Me_2CO. Solid. Monoclinic. Molecular dimensions: irregular anion with face-sharing $BiBr_6$ octahedra Br—Br_{br} 299.4-311.5, Bi—Br_{term} 271.0-277.3 pm.

Tri-Cs salt: see *Tricaesium tri-μ-bromohexabromodibismuthate*(III)(*3*−), *IC-001534*

$Bi_2Br_9H_3$

Trihydrogen tri-μ-bromohexabromodibismuthate(*III*)(3−), 8CI
Trihydrogen nonabromodibismuthate

$H_3[Bi_2Br_9]$

M 1140.1
Salts synth. from $BiBr_3$ in HBr aq. and amine.

Tris-hydrazine salt:
$Bi_2Br_9H_{15}N_6$ M 1236.2
Yellow needles or prisms.

Tris-$MeNH_2$ salt: [72318-18-4].
Exists in paraelectric, pyroelectric, or ferroelectric phases, with transitions at 188K, 140K and 101.5K.

Tris-Et_3N salt: [30815-45-3].
Pale yellow solid. Mp 102-104°.

Tris-diisobutylamine salt: [29532-24-9].
Pale yellow solid. Mp 161-162°.

Tris-piperidine salt: [69853-25-4].
Yellow solid. Insol. polar solvs. Stable in air.

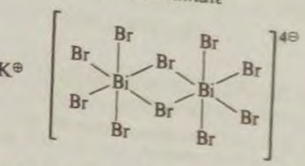
$Bi_2Br_{10}K_4$

Tetrapotassium di-μ-bromooctabromodibismuthate(*III*), 11CI
Tetrapotassium decabromodibismuthate



M 1373.3
Two $BiBr_6$ octahedra sharing common edge.
Tetrahydrate: [63372-87-2].
Synth. from $Bi(OH)_3$ + K_2CO_3 in HBr aq.
Orthorhombic. Isomorphous with tetraammonium salt tetrahydrate. Shows blue luminescence at low temps.

Lazarini, F., *Acta Crystallogr., Sect. B*, 1977, **33**, 1954 (*synth, cryst struct*)
Timmermans, C.W.M. *et al*, *Phys. Status Solidi B*, 1983, **118**, 353 (*props*)

IC-001537

$Bi_2Cs_3I_9$

Tricaesium tri-μ-iodohexaiodobismuthate(*III*)(3−), 9CI
Caesium nonaiodobismuthate(III)
[23351-26-0]

$Cs_3[Bi_2I_9]$

M 1958.8
Hexagonal. Hexacoordinated bismuth atoms in confacial octahedra. Close packing of Cs and I atoms.
Interatomic distances: Bi—I_{term} 292.3, Bi—I_{br} 324.9 pm.
Synth. from CsI + BiI_3 + HI aq., or $CsNO_3$ soln. diffused into NaI + Bi_2O_3 in HOAc. Provides a means of detecting and determining Cs in the presence of K or Rb. Red-brown bipyramidal cryst. (HI aq.). Mp 632° (incongr.). Stable in air to *ca.* 490°, then dec. to CsI + BiI_3.

$Bi_2H_6O_{12}S_3$ IC-001542

Diaquadi-μ-hydroxybis[sulfato(2−)-*O*]dibismuth, 11CI

Di-μ-hydroxobis[aquasulfatobismuth(III)*]. Bismuth hydroxide sulfate monohydrate*

[83896-75-7]

$Bi_2(H_2O)_2(SO_4)_2(OH)_2$

M 680.1

Usually formulated as $BiOH.SO_4.H_2O$ or $Bi_2O_2.2Bi_2(SO_4)_3.9H_2O$. Monoclinic. Struct. contains the rhomboidal, planar $[Bi_2(OH)_2]^{4\oplus}$ ion. One $SO_4^{2\ominus}$ oxygen and one H_2O are bonded to each Bi quite strongly. Coordination around each Bi completed from O atoms of other SO_4 groups at longer distances. The coordination polyhedra are distorted octahedra. Synth. by slow diffusion of H_2O into acid-sat. soln. of Bismuth(*III*) sulfate ($Bi_2(SO_4)_3$), IC-001556. First product of hydrol. of bismuth sulfate.

'Monomeric' formulation: Bismuth hydroxide sulfate monohydrate

BiH_3O_6S M 340.0

Bi_2O_2S IC-001546

Bismuth oxide sulfide (Bi_2O_2S), 11CI

Dibismuth dioxide sulfide

[90014-63-4]

Bi_2O_2S

M 482.0

Bi is coordinated by four O and four S atoms forming square antiprism. The Bi—O bonds form OBi_4 tetrahedra with shared edges forming Bi/O layers. The S atoms link the layers into a three-dimensional network. Bi—O 224.2-239.0, Bi—S 304.0-341.4 pm. Hydrothermal synth., from Bi_2O_3 and Bi_2S_3 in $HO^\ominus$ aq. at 400°/pressure.

Koyama, E. *et al*, *Acta Crystallogr., Sect. B*, 1984, **40**, 105 (*synth, cryst struct*)

Bi_2O_2Se IC-001547

Bismuth oxide selenide (Bi_2O_2Se), 9CI

Dibismuth dioxide selenide

[50811-06-8]

Bi_2O_2Se

M 528.9

Interatomic distances: Bi—O 232, Bi—S 328 pm. Synth. from Bi + Bi_2O_3 + Se in evacuated quartz tube at 800-850°.

Boller, H., *Monatsh. Chem.*, 1973, **104**, 916 (*synth, cryst struct*)

Bi_2O_3 IC-001548

Bismuth oxide (Bi_2O_3), 9CI, 8CI

Bismuth trioxide. Bismuthous oxide. Dibismuth trioxide. Bismuth sesquioxide. Yellow bismuth oxide

[1304-76-3]

M 465.9

Four solid phases recognised with variable polymorphic transitions during cooling. Prepd. by oxidation of Bi by O_2 at 750-800° or by thermal dec. of μ-[Carbonato(2−)-*O*:*O*']dioxodibismuth], IC-002285, Bismuth(*III*) sulfate ($Bi_2(SO_4)_3$), IC-001556, or Bismuth(*III*) nitrate, IC-001516. Occurs in nature as the mineral Bismite. Catalyst for oxidations (and dehydrogenations). Constituent of electrical ceramics, glasses and semiconductors. Formerly employed as a pigment. Yellowish powder, non acidic. Sol. acids; prac. insol. H_2O.

α-form

Monoclinic. Struct. consists of layers of Bi atoms separated by sheets of O atoms. B—O_{av} 235 pm. Synth. from β-form at 650-500° or from Bismuth(*III*) sulfate ($Bi_2(SO_4)_3$), IC-001556 at 950°. Columnar and acicular yellow cryst. At 720-740°, converts into δ-form.

β-form

Tetragonal. Metastable at low temp. Struct. related to fluorite with Bi—O 209.6-246.3 pm, and BiOBi 110.1°, 133.6°. Obt. by cooling δ-form at 650°, or by quenching thin liq. layers. At 650-500°, converts into α-form.

γ-form

Bcc struct. Synth. by cooling δ-form at 640°; struct. may persist at r.t.

δ-form

Disordered fluorite-type struct. Bi—O 231.7 (3×), 309.8 (1×) pm with randomly distributed oxygen vacancies. Synth. from β-form at 660-670° or α-form at 730° or γ-form at 660°. Mp 824°. Converts into β-form at 650° and γ-form at 640°.

Bi_2PbS_4

Galenobismuthite **IC-001558**

Bismuth lead sulfide (Bi_2PbS_4)

[12048-53-2]

$PbBi_2S_4$

M 753.4
Mineral, found in gold, bismuth, tungsten and lead-zinc ores as deposits. Mainly USSR and Asia. Grey metallic cryst.

Klyakhin, V.A. *et al*, *Mater. Genet. Eksp. Mineral*, 1972, **7**, 39 (*synth*)
Takeuchi, Y. *et al*, *Proc. Jpn. Acad.*, 1974, **50**, 222 (*cryst struct*)

Friedrich, M., *Bel. Geowiss. Abh., Reihe A*, 1983, **46**, 109.

Bi_2SSe_2

IC-001559

Bismuth selenide sulfide (Bi_2SSe_2), 9CI, 8CI

Dibismuth diselenide sulfide

Bi_2SSe_2

M 607.9
Orthorhombic. Synth. from elements.

Newmann, G. *et al*, *Helv. Phys. Acta*, 1967, **40**, 293 (*synth, cryst struct*)

Bi_2STe_2

IC-001560

Bismuth sulfide telluride (Bi_2STe_2)

Bi_2STe_2

M 705.2
Constituent of the Bi_2S_3-Bi_2Te_3 system. Exists in polymorphic forms which may, however, have different compositions. Synth. from elements at 300-500°. Lead-grey coloured powder. Mp 630° (congr. *γ* phase).

Mineral-form [1304-78-5]
Tetradymite
Suggested composition $Bi_{14}Te_{13}S_8$ with *α*-phase $Bi_{14}Te_{20}S$, *β*-phase $Bi_{14}Te_{15}S_6$, *γ*-phase $Bi_{14}Te_{13}S_8$. Associated with Au ores, and the Bi ores of Hungary. Found in India, Argentina, USSR (several regions), Poland and China.

Bi_2S_3

IC-001561

Bismuth sulfide (Bi_2S_3), 9CI, 8CI

Bismuth(III) *sulfide. Dibismuth trisulfide. Bismuth sesquisulfide*

[1345-07-9]

Bi_2S_3

M 514.1
Each Bi atom has 4 closest neighbours in a nearly planar rectangle and with additional neighbours completing irregular coordinating polyhedra with Bi—S 254-333 pm. Synth. from $Bi(NO_3)_3$ + H_2S; or from Bi + S ; or by dec. of $M(I)_3[Bi(S_2O_3)_3]$ at 200°. Dark brown or black cryst. with metallic lustre. Mp 850°, Mp 685° dec.

Mineral-form [12233-37-3]
Bismuthinite. Bismuthine. Dismutinite. Bismutholamprite
Occurs with gold deposits and copper ores in parts of the USSR (e.g. Uzbekistan), Europe (Spain, Italy), in the Yukon, and in Brazil.

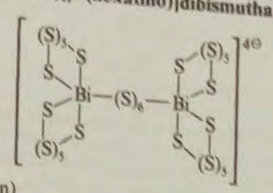
$Bi_2S_{34}^{4\ominus}$

IC-001562

Tetrakis(heptathio)[μ-(hexathio)]dibismuthate(*III*)(4−)



M 1508.2 (ion)

Tetrakis-Ph_4As salt: [100681-55-8].
Synth. from $BiCl_3$ + polysulfides in the presence of Ph_4AsCl. Dark brown cryst. Triclinic. BiS_7 rings approximate to boat-chair conformations. Highly distorted square pyramidal coordination at Bi. Mean interatomic distances: Bi—S 268.3 (ax), 281.7 pm (eq).

Müller, A. *et al*, *Angew. Chem., Int. Ed. Engl.*, 1986, **25**, 273 (*synth, ir, raman, cryst struct*)

Bi_2SeTe_2

IC-001563

Bismuth selenide telluride (Bi_2SeTe_2), 9CI, 8CI

Dibismuth selenide ditelluride

[12010-72-9]

Bi_2SeTe_2

M 752.1
Rhombohedral struct. with 5 layer (Se-Bi-Te-Te-Bi) repeating unit. May exist with ordered or disordered Se/Te sub-lattices. Rapid quenching of element melt gives disordered struct., slow cooling gives ordered struct. A phase in Bi_2Te_3/Bi_2Se_3 system. A thermoelectric material.

Mineral-form [79078-60-7]
Kawazulite
The Se analogue of tetradymite. Occurs in a quartz vein in Japan and in a breccia pipe in Canada. Silver to tin white thin foils.

Bi_2Te_3 IC-001567

Bismuth telluride (Bi_2Te_3), 9CI, 8CI
Dibismuth tritelluride. Bismuth sesquitelluride
[1304-82-1]

Bi_2Te_3

M 800.7
Layer struct. when unit cell in tetradymite hexagonal lattice. Synth. from Bi + Te at 700°, or from Bi_2O_3 + Te + Na formate at *ca.* 300°/100 atm. Semiconductor employed in industrial thermoelectrical technology. Films are ir photosensitive. Grey solid. Mp 586° (573°) (incongr.). Vap. completely dissociated.
▷ EB3110000.

Mineral-form [12068-70-1]
Tellurobismuthite
Widespread in USSR. Also occurs in Sweden, Canada. V. often in gold ores and complex sulfide ores.

Bi_5BrO_4 IC-001568

Bismuth bromide oxide (Bi_5BrO_4), 11CI
Tribismuth bromide tetroxide
[87970-85-2]

Bi_3BrO_4 or $Bi_2O_3.BiOBr$

M 770.8
Orthorhombic. Bi atoms form the apices of flat BiO_3 tetrahedra which are joined to form chains. L.p. is stereochemically active. Bi—Br 330-370. Bi—O 219-286 pm. At least 3 polymorphs reported. Synth. from Bi_2O_3 + BiOBr at 870° in gold capsule; or from Bi_2O_3 + $BiBr_3$ in Pt vessel at 700°. Yellowish powder.

Nurgaliev, B.Z. *et al*, *Zh. Neorg. Khim.*, 1983, **28**, 2207; *Russ. J. Inorg. Chem.* (*Engl. Transl.*), 1983, **28**, 1252 (*synth, cryst struct*)
Aurivillius, B., *Chem. Scr.*, 1984, **24**, 125 (*synth, cryst struct*)

Bi_3ClO_4 IC-001569

Bismuth chloride oxide (Bi_3ClO_4), 11CI
Tribismuth chloride tetroxide
[87970-86-3]

Bi_3ClO_4

M 726.3
Monoclinic, body-centred struct. Synth. from Bi_2O_3 + $BiCl_3$ in Pt at 700° or from Bi_2O_3 in $Cl^\ominus$ soln. at pH > 6. White or pale yellow clusters of platelets.

Nurgaliev, B.Z. *et al*, *Zh. Neorg. Khim.*, 1983, **28**, 2207; 1985, **30**, 1665; *Russ. J. Inorg. Chem.* (*Engl. Transl.*), 1983, **28**, 1252; 1985, **30**, 948 (*synth, cryst struct*)

Bi_3O_8Re IC-001570

Bismuth rhenium(*VII*) oxide (Bi_3ReO_8), 11CI
Bismuth oxide rhenate(VII) ($Bi_3O_3(ReO_4)$)
[73079-50-2]

Bi_3ReO_8

M 941.1
Has a cubic struct. related to fluorite, with ReO_4 tetrahedra rotated to accommodate Bi lone pairs. Re—O 172.8 to 175.3 pm. Synth. from Re_2O_7 and Bi_2O_3 at ~400°. Colourless cryst.; bulk material pale cream-coloured. Mp 1473°. Ir ν_{ReO} 900 cm^{-1}.

Cheetham, A.K. *et al*, *Mater. Res. Bull.*, 1981, **16**, 7 (*synth, ir, struct*)
Cheetham, A.K. *et al*, *Acta Crystallogr., Sect. B*, 1985, **41**, 225 (*cryst struct*)

$Bi_3O_{11}Ru_3$ IC-001571

Bismuth ruthenium oxide ($Bi_3Ru_3O_{11}$), 10CI
Tribismuth triruthenium undecaoxide
[58833-98-0]

$Bi_3Ru_3O_{11}$

M 1106.1
Struct. similar to Lanthanum ruthenium oxide ($La_4Ru_6O_{19}$), IC-020577, Ru—Ru 260 pm indicating strong localised Ru—Ru bonding. Prep. by heating Bi_2O_3 with RuO_2 (mol ratio 1:2) at <975° in air. Cubic cryst. Dec. to $Bi_2Ru_2O_7$ at temps. >975°.

Abraham, F. *et al*, *Compt. Rend. Hebd. Seances Acad. Sci. Sect. C*, 1974, **278**, 421 (*synth, cryst struct*)
Abraham, F. *et al*, *Bull. Soc. Fr. Minéral. Cristallogr.*, 1975, **98**, 25 (*synth, cryst struct*)

$Bi_4Br_2O_5$ IC-001572

Bismuth bromide oxide ($Bi_4Br_2O_5$), 11CI
Tetrabismuth dibromide pentoxide
[87970-87-4]

$Bi_4Br_2O_5$

M 1075.7
Monoclinic. Non-centrosymmetric struct. to 300°. Synth. from Bi_2O_3 + $BiBr_3$ at 800° in Pt. Solid.

Nurgaliev, B.Z. *et al*, *Zh. Neorg. Khim.*, 1983, **28**, 2207; *Russ. J. Inorg. Chem.* (*Engl. Transl.*), 1983, **28**, 1252 (*synth, cryst struct*)

Bi_4ClNbO_8 IC-001573

Bismuth niobium chloride oxide (Bi_4NbClO_8), 11CI
Tetrabismuth chlorooctaoxoniobium(V)
[91261-86-8]

$(Bi_2O_2)_4(NbO_4)_2Cl_2$

M 1092.2
The unit cell contains four Bi_2O_2, two NbO_4 and two Cl layers. The Nb layers are formed by distorted octahedra sharing edges and canted relative to one another. Synth. by heating Bi_2O_3, BiOCl and Nb_2O_5 to 950° in a Pt tube. The bromide and the corresponding Ta compd. are also known.

Aurivillius, B., *Chem. Scr.*, 1984, **23**, 143 (*cryst struct*)
Ackerman, J.F., *J. Solid State Chem.*, 1986, **62**, 92 (*synth, cryst struct*)

$Bi_4Cl_2O_5$ IC-001574

Bismuth chloride oxide ($Bi_4Cl_2O_5$), 9CI
Tetrabismuth dichloride pentoxide
[60674-93-3]

$Bi_4Cl_2O_5$

M 986.8
Orthorhombic. Bi atoms coordinated by (1) 4 oxygens in sq. pyramid with l.p. at apex (Bi—O 236-249 pm) or (2) 5 oxygens in octahedron with l.p. at corner (Bi—O 213-246 pm). The polyhedra are linked by shared edges and corners forming infinite layers. $Cl^\ominus$ ions form parallel trigonal prisms between Bi—O layers. Synth. from Bi_2O_3 + BiOCl in sealed Au capsule at *ca.* 850°. Colourless needle-like cryst.

Hopfgarten, F., *Acta Crystallogr., Sect. B*, 1976, **32**, 2570; 1977, **33**, 952 (*synth, cryst struct*)
Kodama, H. *et al*, *J. Solid State Chem.*, 1988, **75**, 279 (*synth, cryst struct*)

$Bi_4Cl_2S_5$ IC-001575

Bismuth chloride sulfide ($Bi_4Cl_2S_5$), 10CI
Tetrabismuth dichloride pentasulfide
[61393-72-4]

$Bi_4Cl_2S_5$

M 1067.1
Rhombohedral. Struct. has statistical occupancy of sites by S and Cl. Unusual coordination polyhedra around Bi. One Bi has 9 S or Cl neighbours at 288, 290, 344 pm. The remaining 3 Bi atoms are irregularly surrounded each by 8 S or Cl atoms at 262-366 pm. Synth. from BiSCl heated at 350° under N_2, or from BiSCl + Bi_2S_3 heated at 340°. Dark grey solid. $\Delta H^\circ_{f,298}$ –593 kJ mol^{-1}.

Krämer, V., *Z. Naturforsch., B*, 1976, **31**, 1542 (*synth, cryst struct*)

Bi_4O_5 IC-001576

Bismuth oxide (Bi_4O_5), 9CI, 8CI
Tetrabismuth pentoxide
[11078-75-4]

Bi_4O_5

M 915.9

May be identical to the β-phase of Bismuth oxide (Bi_2O_3), IC-001548. Tetragonal cell in which each Bi atom is surrounded by 6 oxygens (trigonal prism) and each O by 4 bismuth atoms (tetrahedron) with Bi—O 214-218 pm and minimum Bi—Bi 375 pm; up to 25% deficiency in oxygen sub lattice. Synth. from Bi + O_2 at 200-250°.

Zav'yalova, A.A. *et al, Kristallografiya*, 1971, **16**, 516; *Sov. Phys. Crystallogr. (Engl. Transl.)*, 1971, **16**, 437 (*struct, synth*)

IC-001578

Bi_4Te_3

Bismuth telluride (Bi_4Te_3), 10CI

Tetrabismuth tritelluride

[69431-11-4]

Bi_4Te_3

M 1218.7

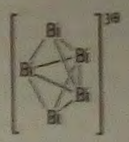
Rhombohedral. Structurally characterised by combination of 5 layers (TeBiTeBiTe). (Te—Bi, 311.5, 332.7, 340.1 pm) with two layers BiBi (Bi—Bi 309.8 pm). Synth. from the elements at 800°.

Yamana, K. *et al, Acta Crystallogr., Sect. B*, 1979, **35**, 147 (*synth, cryst struct*)

IC-001579

$Bi_5^{3\oplus}$

Pentabismuth(3+)



M 1044.9 (ion)

Tris(tetrachloroaluminate): [12301-55-2].
$Al_3Bi_5Cl_{18}$ M 1551.2
Synth. from Bi, $BiCl_3$ and $AlCl_3$ at 250-270° in $KAlCl_4$ or $NaAlCl_4$. Red-brown air and moisture sensitive cryst. (molten $NaAlCl_4$). Mp 326°.

Tris(hexafluoroarsenate): [68002-15-3].
$As_3Bi_5F_{18}$ M 1611.6
Synth. from AsF_5 + Bi in $SO_2(l)$. Bright yellow solid. Slowly oxidised in conc. H_2SO_4.

Corbett, J.D. *et al, Inorg. Chem.*, 1968, **7**, 198 (*synth, props*)
Corbett, J.D. *et al, Prog. Inorg. Chem.*, 1976, **21**, 129 (*rev*)

IC-001580

Bi_5BrO_7

Bismuth bromide oxide (Bi_5BrO_7), 11CI

[89190-54-5]

Bi_5BrO_7 or $BiOBr.2Bi_2O_3$

M 1236.8

Synth. from Bi_2O_3 + $BiBr_3$ → polycryst. at 600°, BiOBr + $OH^{\ominus}$ → single cryst.

Ketterer, J. *et al, Z. Naturforsch., B*, 1984, **39**, 105 (*synth, cryst struct*)

IC-001581

Bi_5IO_7

Bismuth iodide oxide (Bi_5IO_7), 9CI

Pentabismuth iodide heptoxide

[53908-32-0]

Bi_5IO_7 or $BiIO.2Bi_2O_3$

M 1283.8

Two polymorphs recognised. Synth. from BiIO + 5*M* KOH aq. or by heating BiIO at 370° in O_2. Candidate material for immobilisation of radioactive iodine. Yellow solid. Mp 855° (incongr.). At 490° → Bi_2O_3 in O_2.

α-form

Orthorhombic. From BiIO + excess KOH aq., or α-Bi_2O_3 + HI aq.

β-form

Monoclinic. Struct. contains 5 cryst. independent Bi atoms with $[Bi_{10}O_{14}]_n^{2n\oplus}$ columns connected by double rows of iodine atoms. Produced in small amount together with α-form. Colourless solid. In sealed system stable to *ca.* 800° when dec. → Bi_2O_3 + BiI_3.

$Bi_5O_{10}P$

Bismuth oxide phosphate ($Bi_5O_6(PO_4)$), 9CI

[51311-06-9]

$Bi_5O_6(PO_4)$

M 1235.8

Synth. from Bi_2O_3 + $NH_4.H_2PO_4$ at 300°, then at 700-800° in Pt vessel. Pale yellow cryst. Mp 965°.

Brixner, L.H. *et al, Mater. Res. Bull.*, 1973, **8**, 1311 (*synth, cryst struct*)

IC-001583

Bi_6Cl_7

Bismuth chloride (Bi_6Cl_7), 8CI

Hexabismuth heptachloride. Bismuth monochloride

$(Bi_6^{5\oplus})_2(BiCl_5^{2\ominus})_4(Bi_2Cl_8^{2\ominus})$ (tetramer)

M 1502.0

Referred to in earlier lit. as BiCl. Now known to be a 'tetramer'. Contains the Nonabismuth(5+), IC-001587 cation.

Tetramer: Bismuth chloride ($Bi_{24}Cl_{28}$).
Bis(nonabismuth(5+)) octachlorodibismuthate(2−) tetrakis(pentachlorobismuthate(2−))
$Bi_{24}Cl_{28}$ M 6008.2
Synth. from Bi + $BiCl_3$ at 325°. Shiny black prisms with flattened hexagonal cross-sections; dec. slowly in air. Diamagnetic. Stable *in vacuo* to 200°. Cation is tripyramidal trigonal prism with Bi atoms projecting from each face: geometry distorted by unsymm. environment of nearby anions. Anions are tetragonal pyramidal $BiCl_5^{2\ominus}$, and $Bi_2Cl_8^{2\ominus}$ formed by two $BiCl_5^{2\ominus}$ groups sharing two Cl's, Bi—Cl 261-278, Bi—Bi 308, 329 pm.

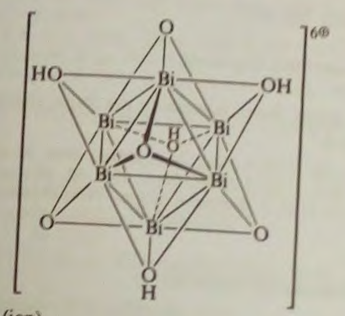
$Bi_6H_4O_8^{6\oplus}$

IC-001584

Tetra-μ$_3$-hydroxytetra-μ$_3$-oxohexabismuth(6+), 11CI

[85507-34-2]



M 1385.9 (ion)

Hexanitrate, tetrahydrate: [69756-07-6].
Synth. by hydrol. of Bismuth(*III*) nitrate, IC-001516 at pH < 1. Earlier formulated as $BiONO_3.H_2O$, or as $Bi_2O_3.N_2O_5.2H_2O$, but appears to be a true hydrate. Thermal dec. starts at ~40°. Loses $2H_2O$ at up to 110°, and two more H_2O at up to 120°. Dehydration complete at 150°.

Hexaperchlorate, heptahydrate: Formed during pptn. of $Bi(OH)_3$ from $Bi(ClO_4)_3$ soln.; and during diln. of $Bi(ClO_4)_3$ soln.; also from Bi_2O_3 + 3M $HClO_4$ aq. Deliquescent, colourless cryst. Orthorhombic. Discrete ion complexes. Formerly represented as $[Bi(OH)_6^{6\oplus}][ClO_4^{\ominus}]_6$.

$Bi_6H_6NO_{12}^{5\oplus}$

Aquatetra-μ$_3$-hydroxy(nitrato-*O*)-tetra-μ$_3$-oxohexabismuth(5+), 10CI

[69716-44-5]

$[Bi_6(OH_2)(NO_3)O_4(OH)_4]^{5\oplus}$

M 1465.9 (ion)

Pentanitrate:
$Bi_6H_6N_6O_{27}$ M 1615.9
Synth. by hydrol. below pH 2.4 of $Bi(NO_3)_3$. Also formulated as $[Bi_6O_4](NO_3)_6.3H_2O$ or as $2BiO.NO_3.H_2O$ or $Bi_2O_3.N_2O_5.H_2O$ Monoclinic. The Bi atoms are at the corners of an octahedron with O's and and OH groups above the centre of the octahedron faces. Each O of each OH has 3 Bi neighbouring atoms arranged pyramidally at long distances. The remaining O's are linked to 3 nearly coplanar Bi's at shorter distances. Bi—O 210-263 pm. $NO_3^{\ominus}$ and H_2O bound to neighbouring Bi atoms.

Br

IC-001601

Bromine, 11Cl

Dibromine

[7726-95-6]

Br_2

M 79.9
Atomic No. 35. Ground state electron config. [Ar] $3d^{10}4s^24p^5$. Isol. in 1826 by A.J. Balard and C. Löwig. Abundance: 2.5 ppm (earth's crust) and 65 ppm (sea water). Br—Br: 228 pm, 227 pm (solid). Also occurs naturally in several marine species. There are 19 isotopes of which ^{79}Br and ^{81}Br are natural and are of importance in nmr spectroscopy. Obt. as bromide from natural brines from wells in USA. Oxidation by air gives the element. Synth. from metallic bromides by reaction with oxidants (e.g. $K_2Cr_2O_7/H_2SO_4$). Liberated from brines on chlorination. Used in making lead scavenging agents, fumigants, flameproofing agents, water purifn. prods., and many fine chemicals with wide applications. Dark brownish-red liq., with a strong disagreeable pungent odour, forming rhombic cryst. Strong oxidant. Sol. H_2O (3% at r.t.) increased in

presence of bromide salts. Misc. most org. solvs. (although it may react). d^{20} 3.12 (l). Mp −7.3°. Bp 59.5°. Forms adducts with many org. compds. (e.g. ethers such as dioxan, and aromatic hydrocarbons) and also hydrates. Dissociates at > 600°. Bond energy 193 kJ mol^{-1}.

▷ Causes painful burns on skin contact; irritates eyes and throat. EF9100000.

Octahydrate: Light red cryst. Cubic. May be stored at r.t. at < 6.2°.

BrCa$_5$O$_{12}$P$_3$ IC-001602

Calcium bromide phosphate ($Ca_5Br(PO_4)_3$), 9CI

Calcium bromapatite

[12514-27-1]

$Ca_5Br(PO_4)_3$

M 565.2

Typical apatite-type struct. with P—O 153.1-154.8 pm, OPO 106.5-112.3°. Synth. from Calcium hydroxide phosphate ($Ca_5(OH)(PO_4)_3$), IC-016091 + HBr; or from Calcium phosphate ($Ca_3(PO_4)_2$), IC-016074 + $CaBr_2$ at 750-900° under N_2. Colourless hexagonal rods or plates. May show slight Br deficiency.

BrCd$_5$O$_{12}$V$_3$ IC-001603

Cadmium bromide vanadate ($Cd_5Br(VO_4)_3$)

Cadmium vanadium bromide oxide ($Cd_5V_3BrO_{12}$), 11CI

[12394-00-2]

$Cd_5(VO_4)_3Br$

M 986.7

Apatite-like struct. with Br vacancies. *Cf* Cadmium iodide vanadate ($Cd_5I(VO_4)_3$), IC-016249; a Cl analogue is also known. Synth. by melting $Cd_3(VO_4)_2$ and excess $CdBr_2$ in a Pt crucible at 730-750°. The composition of the phase studied was $Br_{1.41}Cd_{4.86}O_{12}V_3$.

BrCl IC-001604

Bromine chloride (BrCl)

Bromine monochloride

[13863-41-7]

BrCl

M 115.3

Br—Cl 213.8 pm. Cannot be isolated free from bromine and chlorine. Mp −66°. Bp 5° dec. ΔH_f° +14.6 kJ mol^{-1}. Ir ν 440 cm^{-1}.

▷ EF9220000.

BrClHg IC-001606

Mercury bromide chloride (HgBrCl)

[13595-89-6]

HgBrCl

M 315.9

α-form contains regular distribution of Br and Cl; β-form random. Heating to Mp increases proportion of α-form. Crystallisation (from EtOH) increases proportion of β-form. Method of preparation and order of mixing anions affects the proportion of the two forms. Synth. from Hg_2Cl_2 and Br_2 or $HgCl_2$ and $HgBr_2$ at 90°. Cryst. Mp 240°.

BrClI$^\ominus$ IC-001607

Bromochloroiodate(*I*)(1−)

[23297-41-8]

[Cl—I—Br]$^\ominus$

M 242.2 (ion)

Linear: I—Cl 284, I—Br 254 pm. Forms red salts. Dissociates in H_2O.

NH_4 salt: [16962-55-3].
Cs, K, Rb salts also known.

Me_4N salt: [15695-49-5].
Synth. from Me_4NBr and ICl in AcOH. Orange cryst. (AcOH and 3%ICl).

Wells, H.L. *et al, Am. J. Sci.*, 1892, **43**, 417 (*synth*)
Inorg. Synth., 1957, **5**, 167.
Migchelsen, T. *et al, Acta Crystallogr.*, 1967, **22**, 812 (*cryst struct, NH_4 salt*)
Maki, A.G. *et al, Spectrochim. Acta, Part A*, 1967, **23**, 867 (*ir, raman*)

BrClI$^\oplus$ IC-001608

Bromochloroiodine(1+), 11CI, 9CI

[Br—I—Cl]$^\oplus$

M 242.2 (ion)

Bent cation, spectroscopically characterised.

Hexachloroantimonate: [38656-80-3].
$BrCl_7ISb$ M 576.7
Synth. from $SbCl_5$, IBr and Cl_2. Large dark red cryst.

Fluorosulfate: [56244-21-4].
$BrClFIO_3S$ M 341.3
Synth. from a solid mixt. of IBr_2SO_3F and ICl_2SO_3F, heated to 95°. Crimson red solid. Mp 64-65°.

Shamir, J. *et al, Inorg. Chem.*, 1973, **12**, 1108 (*synth, raman, hexachloroantimonate*)
Wilson, W.W. *et al, J. Inorg. Nucl. Chem.*, 1975, **37**, 665 (*fluorosulfate*)

BrClOS IC-001609

Thionyl bromide chloride

[22650-47-1]

O=SBrCl

M 163.4

Known only as a mixt. with $SOCl_2$ and $SOBr_2$. Synth. by reaction of $SOCl_2$ + KBr in liq. SO_2 at −30°.

Steudel, R. *et al, Z. Naturforsch., B*, 1969, **24**, 350 (*synth, ms, ir*)
Gmelin Handbook Inorg. Chem., Syst. No. 9, *Suppl. Vol.*, 1978, **1**, 71 (*bibl*)

BrClOSe IC-001610

Selenium bromide chloride oxide (SeBrClO), 11CI

Selenium oxy chloride bromide

[82735-17-9]

M 210.3 BrClSe=O

Formed by reaction by $OSeCl_2$ + $OSeBr_2$. Orange-red liq. Mp 17°.

Milne, J., *Spectrochim. Acta, Part A*, 1982, **38**, 569 (*synth, raman, Se-77 nmr*)

BrClO$_4$ IC-001611

Bromine(*I*) perchlorate 9CI, 8CI

[32707-10-1]

$BrOClO_3$

M 179.3

Synth. from $CsClO_4$ + $BrOSO_2F$ at −20°. Red liq., dec. at −20°. Mp −78°.

Schach, C.J. *et al, Inorg. Chem.*, 1971, **10**, 1078 (*synth, ir*)
Christe, K.O. *et al, Inorg. Chem.*, 1971, **10**, 1589 (*ir*)

BrClO$_6$ IC-001612

Bromyl perchlorate

Bromine(V) *oxide perchlorate* ($BrO_2(ClO_4)$)

[52225-67-9]

$O_2BrOClO_3$

M 211.3

Formed from pure O_3 + $BrOClO_3$ in CF_3Cl at −45°. Bright orange solid. Mp >-35° dec.

▷ Potentially explosive.

Schack, C.J. *et al, Inorg. Chem.*, 1974, **13**, 2378 (*synth, reactions*)

BrCl$_2^\ominus$ IC-001613

Dichlorobromate(*I*)(1−)

[14522-78-2]

[Cl—Br—Cl]$^\ominus$

M 150.8 (ion)

Linear centrosymmetric ion. Forms yellow-red salts. Dissociates in H_2O.

Me_4N salt: [1863-68-9].
Synth. from Me_4NBr and excess Cl_2 (g) in AcOH. Yellow cryst. Mp 160-163°.

Inorg. Synth., 1957, **5**, 167.
Evans, J.C. *et al, J. Chem. Phys.*, 1966, **44**, 4356 (*ir*)
Gabes, W. *et al, J. Mol. Struct.*, 1972, **14**, 267 (*struct*)

BrCl$_2$I$_2^\ominus$ IC-001614

Bromodichloroiodoiodate(1−)

[BrCl$_2$I$_2$]$^\ominus$

M 404.6 (ion)

Struct. not established.

Me_4N salt: [19510-32-8].
Synth. from $[Me_4N]ICl_2$ and ICl or from $[Me_4N]ICl_2$ and IBr. Red-brown cryst. Mp 24-25°. No evidence of isomerisation of pentahalide anion found.

2,2′-Bipyridinium(1+) salt: [23172-03-4].
Synth. from 2,2′-bipy.$HICl_2$ and IBr in 1,2-dichloroethane followed by dilution with CCl_4. Orange powder. Mp 67°.

Yoshiharu, Y. *et al, J. Inorg. Nucl. Chem.*, 1967, **29**, 2223 (*synth, ir*)

IC-001615

$BrCl_3OP$

Phosphoryl bromide chloride ($POBrCl_2$), 9CI, 8CI

Bromodichlorophosphine oxide.
Bromodichlorooxophosphorus(V)

[13455-03-3]

$BrP(O)Cl_2$

M 197.7
Synth. from PCl_5 + PBr_5 + P_4O_{10}. Colourless liq. Fumes in moist air. d^{20} 2.09. Mp 10-11°. Bp 135°, Bp_{39} 52°. n_D^{20} 1.5092.

Gmelin Handbook Inorg. Chem., Syst. No. 16, 1965, **C**, 516 (*rev, bibl*)

IC-001616

$BrCl_3O_8^{\ominus}$

Bis(perchlorato)bromate(*I*)(1−)

$[O_3Cl{-}O{-}Br{-}O{-}ClO_3]^{\ominus}$

M 278.8 (ion)
Cs salt: [51108-46-4].
$BrCl_2CsO_8$ M 411.7
Synth. from CsBr + Cl_2O_7 at −45°. Yellow solid, stable under dry N_2.

Christie, K.O. *et al, Inorg. Chem.*, 1974, **13**, 1452 (*synth, powder, struct, ir, raman*)

IC-001617

$BrCl_3P$

Phosphorus bromide chloride ($PBrCl_2$), 8CI

Phosphorous bromide dichloride, 9CI.
Bromodichlorophosphine. Bromodichlorophosphorus(III)

[13536-48-6]

$PBrCl_2$

M 181.7
Obt. only in mixt. with PBr_3Cl. Formed by equilibration between PCl_3 and PBr_3. Liq. Protonated by 'magic' acid. V. reactive to protic nucleophiles. Fumes in air. Bp 98-99°.

▷ Violent reaction to H_2O.

Gmelin Handbook Inorg. Chem., Syst. No. 16, 1965, **C**, 514 (*rev, bibl*)
Müller, A. *et al, J. Mol. Struct.*, 1968, **2**, 149 (*ir, raman*)

IC-001618

$BrCl_3Fe^{\ominus}$

Bromotrichloroferrate(*III*)(1−), 11CI

[31107-64-9]

$[FeBrCl_3]^{\ominus}$ (C_{3v})

M 242.1 (ion)
Mixed haloferrate from reaction of $FeCl_3$ with $Br^{\ominus}$. Salts are used in pesticides.

K salt: [93346-54-4]. *Iron(III) potassium bromide trichloride (FeKBrCl₃)*
$BrCl_3FeK$ M 281.2
Catalyst for bromination of styrene polymers.
Et_4N salt: [15651-10-2].
Synth. from $FeCl_3$ + $[Et_4N]Br$ in EtOH.
Ph_4P salt: [109740-51-4].
Catalyst for reaction of propylene oxide with amino acid derivs.

Clausen, C.A. *et al, Inorg. Chem.*, 1970, **9**, 220 (*ir, mössbauer, synth*)
Bhavsar, G.P. *et al, J. Mol. Struct.*, 1973, **16**, 343 (*ir*)

IC-001619

$BrCl_3P^{\oplus}$

Bromotrichlorophosphonium

Bromotrichlorophosphorus(I+), 9CI, 8CI

[36487-48-6]

$[PBrCl_3]^{\oplus}$

M 217.2 (ion)
Produced in ion-pairs with several anions, but few such salts isolated, although they may have been characterised spectroscopically in soln. Synth. from PCl_3 + Br_2 in Ac_2O or liq. HCl; or from PBr_3 + Cl_2 in oleum.

Tetrachloroborate: [16581-21-8].
$BBrCl_7P$ M 369.8
Synth. from PCl_3 + Br_2 in HCl(l) + BCl_3. White solid.
Hexafluorophosphate: [34269-62-0].
$BrCl_3F_6P_2$ M 362.2
Synth. from PCl_3 + Br_2 in HCl(l) + PCl_5. White solid.

Salthouse, J.A. *et al, J. Chem. Soc. A*, 1967, 1096 (*synth*)
Finch, A. *et al, J. Chem. Soc., Dalton Trans.*, 1973, 1863 (*synth, raman*)

$BrCl_4H_2OPt^{\ominus}$

Aquabromotetrachloroplatinate(*IV*)(1−), 10CI

[65176-63-8]

$[(H_2O)PtBrCl_4]^{\ominus}$

M 434.8 (ion)
Not isol. Prep. *in situ* for kinetic substitution studies by Br_2 + $[PtCl_4]^{2\ominus}$ in H_2O. Isomerism not investigated.

Elding, L.I. *et al, Inorg. Chim. Acta*, 1977, **24**, 239.

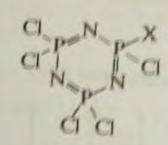
IC-001623

$BrCl_5N_3P_3$

2-Bromo-2,4,4,6,6,6-pentachloro-2,2,4,4,6,6-hexahydro-1,3,5,2,4,6-triazatriphosphorine, 8CI

Bromopentachlorocyclotriphosphonitrile.
Bromopentachlorocyclotriphosphazene. 2-Bromo-2,4,4,6,6-pentachloro-2λ⁵,4λ⁵,6λ⁵-cyclotriphosphaza-1,3,5-triene. 2-Bromo-2,4,4,6,6-pentachloro-1,3,5,2λ⁵,4λ⁵,6λ⁵-triazatriphosphinine

[14740-93-3]



X = Br

M 392.1
Formed from mixture of $P_3N_3Cl_6$ and $P_3N_3Br_6$ heated to 250°. Orthorhombic cryst. Mp 122° (120°).

Rotzsche, H. *et al, J. Inorg. Nucl. Chem.*, 1966, **28**, 687 (*synth, gc*)

IC-001624

$BrCl_5Nb^{\ominus}$

Bromopentachloroniobate(*V*)(1−), 11CI

[34373-30-3]

$[NbBrCl_5]^{\ominus}$ (C_{4v})

M 350.0 (ion)
Octahedral anion.

H compd.: [98538-82-0].
$BrCl_5HNb$ M 351.0
Synth. by dissolving $NbCl_5$ in Et_2O saturated with HBr. Deep red solid + $2Et_2O$.
Et_4N salt: [23081-23-4].
Synth. from a stoichiometric mixture of $NbCl_5$ and $[Et_4N]Br$ in MeCN. Pale yellow solid.

Ozin, G.A. *et al, J. Chem. Soc. A*, 1969, 642 (*synth, ir, uv-vis*)

IC-001626

$BrCl_5Re^{2\ominus}$

Bromopentachlororhenate(*IV*)(2−), 10CI

$[ReBrCl_5]^{2\ominus}$

M 443.3 (ion)
Di-K salt: [63701-67-7].
$BrCl_5K_2Re$ M 521.5
Formed by fusion of K_2ReBr_6 and K_2ReCl_6 above 420°. Separated from other mixed ions by ion column chromatography and extracted by tridodecylamine in Et_2O. Solid. Distorted K_2PtCl_6-type structure.

Hauck, J. *et al, Acta Crystallogr., Sect. B*, 1977, **33**, 2124 (*synth, cryst struct, ir, props*)
Mueller, H. *et al, Z. Anorg. Allg. Chem.*, 1983, **503**, 15 (*synth, cryst struct, uv, props*)

IC-001627

$BrCl_5Ta^{\ominus}$

Bromopentachlorotantalate(*V*)(1−), 11CI

$[TaBrCl_5]^{\ominus}$ (C_{4v})

M 438.1 (ion)
Octahedral anion. A wide range of mixed halides $[TaX_5Y]^{\ominus}$ is known.

H compd.: [98538-83-1].
$BrCl_5HTa$ M 439.1
Synth. as an $(Et_2O)_2H$ salt by adding $TaCl_5$ to a saturated soln. of HBr in Et_2O. Yellow-orange hygroscopic solid + Et_2O. Sol. DMF; sl. sol. MeCN, Me_2CO, alcohols. The Et_2O may be replaced by Py or ethylenediamine.
Et_4N salt: [22602-30-8].
Synth. from $[Et_4N]Br$ and $TaCl_5$ in MeCN or $MeCN/CHCl_3$. Pale yellow solid.
Hexakis(acetonitrile)copper(2+) salt: [69569-65-9].
$C_{12}H_{18}Br_2Cl_{18}CuN_6Ta$ M 1005.1
Synth. from $CuBr_2$ and $TaCl_5$ in MeCN. Similar salts known for several first row transition metals.

Ozin, G.A. *et al, J. Chem. Soc. A*, 1969, 642 (*synth, uv-vis, ir, raman*)

IC-001628

$BrCl_5P_2$

Phosphorus bromide chloride (P_2BrCl_5), 9CI

Bromononachlorodiphosphorus(V)

[53096-45-0]

$[PCl_4^{\oplus}]_6[PCl_3Br^{\oplus}]_2[PCl_6^{\ominus}]_4[Br^{\ominus}]_4$ (hexamer)

M 460.9
Exists as ionic hexamer.

Bis(bromotrichlorophosphonium) hexakis(tetrachlorophosphonium) tetrakis(hexachlorophosphate)

Hexameric-form

$Br_4Cl_{36}P_{12}$ M 2765.5

Synth. from PCl_5 + Br_2 in $AsCl_3$. Pale yellow cryst. V. hygroscopic. Dec. at 142°.

Kolditz, L. et al, Z. Anorg. Allg. Chem., 1957, 293, 286 (synth)
Gmelin Handbook Inorg. Chem., Syst. No. 16, 1965, C, 515 (rev, bibl)

$BrCoH_{15}N_5^{2\oplus}$ IC-001629

Pentaamminebromocobalt(*III*)(2+), 10Cl, 11Cl

[14970-15-1]

$[Co(NH_3)_5Br]^{2\oplus}$

M 223.9 (ion)
Many salts studied. Aquation, photolysis and reduction much studied.

Dibromide: [14283-12-6].
$Br_2CoH_{15}N_5$ M 383.7
Fine light lavender-coloured cryst. or large purple cryst. Photolysis suggests production of Co(*II*) and Br radicals. Dec. at 100° *in vacuo*.

Dichloride: [13601-38-2].
Cryst. (H_2O, pH 4). Dec. at 110° *in vacuo*.

Diiodide: Garnet coloured transparent thick plates. Dec. at 40° *in vacuo*.

Diperchlorate: [14591-65-2].
Violet prisms.

$BrCrH_{15}N_5^{2\oplus}$ IC-001630

Pentaamminebromochromium(*III*)(2+), 11Cl, 10Cl, 9Cl

Bromopentaamminechromium(III)

[22269-65-2]

$[CrBr(NH_3)_5]^{2\oplus}$

M 217.0 (ion)
Octahedral cation.

Dibromide: [13601-60-0]. *Chromium(III) bromide pentaammine*
Synth. from $[Cr(OH_2)(NH_3)_5](ClO_4)_2$ and aq. $HClO_4$/NaBr at 50°. Reddish solid. Dec. by H_2O.

Diperchlorate: [60551-54-4].
Obt. by metathesis of the bromide.

Inorg. Synth., 1957, 5, 134 (synth)

$BrCrO_3^{\ominus}$ IC-001631

Bromotrioxochromate(1−), 9Cl

Bromochromate

[33091-56-4]

$[CrO_3Br]^{\ominus}$

M 179.8 (ion)
Prepd. by reaction of CrO_3 with HBr.

Rb salt: [39043-67-9].
$BrCrO_3Rb$ M 265.3
Yellow cryst.

Cs salt: [39043-68-0].
$BrCrCsO_3$ M 312.8
Yellow cryst.

Pyridinium salt: [107139-14-0]. *Pyridinium bromochromate*
Reagent for bromination and oxidation of org. compds. Dark brown cryst.

[20860-99-5, 54678-82-9, 99921-38-7]

Koeniger-Ahlborn, E. et al, Z. Naturforsch., B, 1972, 27, 1108 (synth, ir, uv)

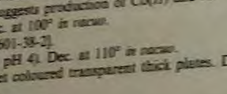
Narayanan, N. et al, Indian J. Chem., Sect. B, 1986, 25, 228 (synth, use, pyridinium salt)

$BrCrO_5^{\ominus}$ IC-001632

Bromooxodiperoxychromate(*VI*)(1−), 8Cl



X = Br

M 211.8 (ion)
Distorted pentagonal pyramidal struct. proposed.

$MeAsPh_3$ salt: [21005-03-8].
Blue cryst. Stable for several months. Dec. at 110°.

Armstrong, R. et al, Aust. J. Chem., 1968, 21, 897 (synth, ir)
Sastri, M.N. et al, J. Inorg. Nucl. Chem., 1968, 30, 1727 (synth, props)

BrCs IC-001633

Caesium bromide (CsBr), 8Cl

[7787-69-1]

CsBr

M 212.8
CsCl type struct. Prepd. by slow neutralisation of Cs_2CO_3 with HBr in aq. soln. Alternatively reaction of Cs_2CO_3 with Br_2 in aq. soln. containing $N_2H_4.H_2O$ affords pure CsBr. Commercially available. Used in optical windows. Deliquescent colourless cubic cryst. V. sol. H_2O (124 g per 100 cm^3 at 25°). Mp 636°. Bp 1300°. ΔH_f° −406 kJ mol^{-1}; ΔG_f° −391 kJ mol^{-1}; S° 113 J K^{-1} mol^{-1}.

▷ Irritant. FK9275000.

$BrCsO_3$ IC-001634

Caesium bromate(*V*) ($CsBrO_3$)

Bromic acid, caesium salt, 8Cl

[13454-75-6]

$CsBrO_3$

M 260.8
Prepd. by dissolving crystalline Cs_2CO_3 in aq. $HBrO_3$. Colourless cryst. (H_2O). Dec. on heating to form CsBr and O_2. Radiolysis results in formation of $BrO^{\ominus}$, and $O_3^{\ominus}$ and enhanced thermal dec. Spar. sol. H_2O (3.7 g per 100 cm^3 at 25°). Mp ~420°. ΔH_f° −366 kJ mol^{-1}.

BrCu IC-001635

Copper bromide (CuBr)

Cuprous bromide

[7787-70-4]

CuBr

M 143.4
Polymorphic. γ-CuBr (zinc-blende struct.) exists below 390°, β-CuBr (Wurtzite struct.) between 391 and 470°, and α-CuBr (cubic) above 470°. Prepd. by reducing aq. $CuSO_4$ contains KBr with SO_2 or with metallic Cu. Can also be prepd. from the elements. Catalyst in org. synth. Colourless cryst. Sl. sol. H_2O; prac. insol. Me_2CO. Mp 504°. Bp 1345°.

BrFHg IC-001637

Mercury bromide fluoride (HgBrF)

[56564-54-6]

HgBrF

M 299.4
Synth. from Hg_2F_2 and Br_2 or from condensed HgF_2 and $HgBr_2$ vapour. White cryst. at r.t., turns yellow on standing; yellow cryst. at 90°. Dec. at 184° → HgF_2 + $HgBr_2$.

Jander, G. et al, Z. Anorg. Allg. Chem., 1951, 265, 117 (synth)
Rastogi, R.P. et al, J. Inorg. Nucl. Chem., 1975, 37, 1167 (synth, powder struct)

$BrFI^{\ominus}$ IC-001638

Bromofluoroiodate(1−), 11Cl, 10Cl, 9Cl

[19236-17-0]

$[BrIF]^{\ominus}$

M 225.8 (ion)

Cs salt: [75374-90-2].
Synth. from CsF and excess IBr at 50° under dry N_2.

Tl salt: [55482-13-8].
Synth. from TlF and IBr under vacuum at 80-85°.

Batsanov, S.S. et al, Zh. Neorg. Khim., 1975, 20, 689; Russ. J. Inorg. Chem. (Engl. Transl.), 1975, 20, 464 (synth Tl salt)
Birchall, T. et al, J. Chem. Soc., Dalton Trans., 1980, 1060 (mössbauer, synth, Cs salt)

BrFOS IC-001639

Thionyl bromide fluoride

Sulfur(IV) bromide fluoride oxide (SBrFO)

[81539-20-0]

O=SBrF

M 146.9
Synth. by reaction of $SOBr_2$ + F_2.

Gmelin Handbook Inorg. Chem., Syst. No. 9, 1978, B1 (bibl)
Rappert, I., J. Fluorine Chem., 1982, 20, 75 (synth, F-19 nmr)

$BrFO_2$ IC-001640

Bromine fluoride oxide ($BrFO_2$), 9Cl

Bromyl fluoride, 10Cl

[22585-64-4]

M 130.9
Square pyramidal monomer. Synth. from $KBrO_3$ and BrF_3 in HF at −50°. White solid at low temp. Sol. BrF_3. Mp −10°.

[64544-65-6, 67452-70-4]

Sloth, E.N., J. Phys. Chem., 1969, 73, 1569 (ms)

Jacob, E., Z. Anorg. Allg. Chem., 1977, 433, 255 (synth, ir)
Christie, K.O. et al, Inorg. Chem., 1978, 17, 2744 (ir)

$BrFO_2S$ IC-001641

Sulfuryl bromide fluoride, 10CI

Sulfonyl bromide fluoride

[13536-61-3]

$S(O)_2BrF$

M 162.9

Tetrahedral molecule. Synth. from BrF + SO_2. Thermally stable colourless liq., rapidly hydrol. d^0 2.17. Mp −86°. Bp 40°.

▷ Reacts slowly with glass.

Jolly, W.C., *Prep. Inorg. React.*, 1966, **3**, 35 (*rev, ir, nmr*)

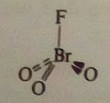
$BrFO_3$ IC-001642

Bromine fluoride oxide ($BrFO_3$), 9CI

Perbromyl fluoride, 9CI

[37265-91-1]



M 146.9

Tetrahedral molecule isostructural with ClO_3F. Synth. from $KBrO_4$ and SbF_5 in anhydrous HF. Highly volatile liq. or gas; often yellow due to impurities. Hydrol. in alkaline solns. Mp −110°.

[25251-03-0]

Appelman, E.H. *et al*, *J. Am. Chem. Soc.*, 1969, **91**, 4561 (*synth, ms*)

BrFPb IC-001644

Lead(*II*) bromide fluoride (PbBrF), 9CI

[13569-42-1]

PbBrF

M 306.1

Has a layer struct. Formed when Pb salt is added to a soln. containing both $Br^{\ominus}$ and $F^{\ominus}$. Solid. Spar. sol. H_2O.

Talipov, Sh.T. *et al*, *CA*, 1959, **53**, 13736g (*sol'y*)

Rulmont, A., *Compt. Rend. Hebd. Seances Acad. Sci. Sect. C*, 1973, **276**, 775 (*synth, cryst struct*)

$BrF_2^{\ominus}$ IC-001645

Bromofluorofluorate

$[BrFF]^{\ominus}$

M 117.9 (ion)

Synth. from MBr and F_2/Ar. Characterised by ir at 15K in an Ar matrix.

K salt: [69204-10-0].
Rb salt: [69204-11-1].
Cs salt: [69204-12-2].

Miller, J.H. *et al*, *Inorg. Chem.*, 1979, **18**, 988 (*ir*)

$BrF_2^{\ominus}$ IC-001646

Difluorobromate(1−), 11CI, 10CI, 9CI

[25730-96-5]

$[F—Br—F]^{\ominus}$

M 117.9 (ion)

Linear symmetric anion. Synth. from MBr and F_2/Ar.

Na salt: [69204-01-9].
K salt: [69204-02-0].
Rb salt: [69204-03-1].
Cs salt: [40419-00-9].

Complicated synth. from BrF_3 in Br_2 and CsF. Light yellow powder.

$BrF_2^{\oplus}$ IC-001647

Difluorobromine(1+)

[31159-95-2]

$[F—Br—F]^{\oplus}$

M 117.9 (ion)

Bent ion. Angle 90.7°, Br—F 172 pm. Colourless ion. Reacts violently with H_2O.

Hexafluoroarsenate: [30051-24-2].

Synth. from BrF_3 and AsF_5. White cryst. Marginally stable at r.t.

Hexafluoroantimonate: [19379-47-6].

BrF_6Sb M 353.6

Synth. from BrF_3 and SbF_5. White cryst., developing pink to red colour on storage.

Hexafluorogermanate(2−) (2:1): [30051-23-1].

$Br_2F_{10}Ge$ M 422.4

Synth. from GeF_4 and BrF_3. White cryst. Subl. 20° *in vacuo*.

Edwards, A.J. *et al*, *J. Chem. Soc. A*, 1969, 1467 (*struct*)

$BrF_2NO_4S_2$ IC-001648

N-Bromoimidodisulfuryl fluoride, 9CI

N-Bromoiminodisulfonyl difluoride

[104715-40-4]

$BrN(SO_2F)_2$

M 260.0

Synth. from $BrOSO_2F$ + $Hg[N(SO_2F)_2]_2$ at 22°. Pale yellow liq., stable in the dark. Mp −19°. Forms BrCl with AgCl.

Singh, S. *et al*, *Inorg. Chem.*, 1986, **25**, 4596 (*synth, ir, ms, F-19 nmr*)

BrF_2NS IC-001649

Bromoimidosulfurous difluoride, 11CI

[25005-08-7]

$BrN{=}SF_2$

M 163.9

Formed from $Hg(NSF_2)_2$ + Br_2. Light-sensitive, pale-yellow liq. Low thermal stability. Bp 56.5°. Can be stored in glass containers at −78°.

▷ Toxic, reacts explosively with H_2O.

Inorg. Synth., 1986, **24**, 20 (*synth, ir, F-19 nmr*)

BrF_2OP IC-001650

Phosphoryl bromide fluoride ($POBrF_2$), 9CI, 8CI

Bromodifluorophosphine oxide.
Bromodifluorooxophosphorus(V)

[14014-18-7]

$BrP(O)F_2$

M 164.8

Synth. from Diphosphoryl fluoride, IC-018436 + PBr_5, or from Phosphorodifluoridic acid, IC-018146 + PBr_5. Volatile liq. Fumes in air. d_4^{20} 2.001, d^0 2.099 (liq.). Mp −84.8°. Bp 30.5°. ΔH_f°(g) −957 kJ mol^{-1}.

▷ Reacts violently with H_2O.

Booth, H. *et al*, *J. Am. Chem. Soc.*, 1939, **61**, 3120 (*synth*)

BrF_2P IC-001651

Phosphorus bromide fluoride ($PBrF_2$), 8CI

Phosphorous bromide difluoride, 9CI.
Bromodifluorophosphine. Bromodifluorophosphorus(III)

[15397-40-7]

$PBrF_2$

M 148.8

Monomeric. Synth. from PBr_3 + SbF_3; or from Et_2NPF_2 + PBr_3. Gas. Best synth. immediately before use. Reacts slowly with Hg. Fumes in air. Mp −133.8°. Bp −16.1°.

▷ Sharp odour.

BH_3 complex (1:1):

$BBrF_2H_3P$ M 162.7

V. volatile liq. Mp −125°. Bp 23.7°.

BrF_3 IC-001653

Bromine fluoride (BrF_3)

Bromine trifluoride

[7787-71-5]

BrF_3

M 136.8

T-shaped molecule. Outer bond lengths 181.0 pm, stem 172.1 pm. Angle 86.2°. Commercially available. Used as a powerful fluorinating agent and in nuclear fuel processing. Straw-coloured liq. d_4^{20} 2.843. Mp 8.8°. Bp 127°. ΔH_f° −301 kJ mol^{-1}.

▷ V. corrosive. Reacts violently with H_2O, organic materials. EF9360000.

$BrF_4^{\ominus}$ IC-001657

Tetrafluorobromate(*III*)(1−)
[19702-38-6]

$[BrF_4]^{\ominus}$

M 155.8 (ion)
Square-planar; Br—F 189 pm.
▷ Reacts violently with H_2O.

Rb salt: [16060-02-9].
BrF_4Rb M 241.3
Colourless solid. Dec. on heating.
Cs salt: [15705-88-1].
$BrCsF_4$ M 288.8
Synth. under vacuum from CsF and BrF_3 at 80°.
Colourless solid. Dec. on heating.
Ag salt: [35967-89-6].
$AgBrF_4$ M 263.7
Synth. from BrF_3 and Ag or Ag_2CO_3.
Nitrosyl salt:
BrF_4NO M 185.9
Synth. from BrF_3 and NOF at r.t. White cryst. Subl. 100° (in N_2). Dec. at 24.8° (2 mm Hg).
Me_4N salt: [122821-60-7].
Hazardous synth. from $[Me_4N]F$ and $CsBrF_4$ in MeCN. White cryst. Phase change at 80°; dec. at 257°.

Edwards, A.J. *et al*, *J. Chem. Soc. A*, 1969, 1936 (*cryst struct, K salt*)

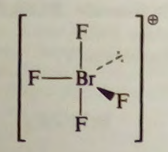
$BrF_4^{\oplus}$ IC-001658

Tetrafluorobromine(1+)
[41646-52-0]



M 155.8 (ion)
Br—F 177, 185 pm. Colourless cation. Reacts violently with H_2O.
Hexafluoroantimonate:
$BrF_{10}Sb$ M 391.6
Synth. from stoichiometric quantities of BrF_5 and SbF_5.
μ-Fluorodecafluorodiantimonate: [36445-03-1].
$BrF_{15}Sb_2$ M 608.3
Synth. from $2SbF_5$ and BrF_5 at 120°. Used to extract Xe and Rn from the atm. White cryst.

Meinert, H. *et al*, *Z. Chem.*, 1970, **10**, 226 (*ir, F-19 nmr, $Sb_2F_{11}^{\ominus}$*)

Baran, E.J., *J. Fluorine Chem.*, 1981, **17**, 543 (*ir, raman*)

BrF_4Mo IC-001659

Molybdenum bromide fluoride ($MoBrF_4$), 9CI
[25081-79-2]

$MoBrF_4$

M 251.8
Prob. has a polymeric struct. Prepd. from MoF_6 and $MoBr_4$. Non-volatile red-brown, glassy solid.

Mercer, M. *et al*, *J. Chem. Soc. A*, 1969, 2532 (*synth*)

BrF_5 IC-001660

Bromine fluoride (BrF_5)
Bromine pentafluoride
[7789-30-2]

BrF_5

M 174.8
Square based pyramid with Br sl. below the square base. Base bond length 178 pm, apex bond length 168 pm. Base/apex angle 84.5°. Commercially available. Colourless liq. Extremely vigorous fluorinating agent. d^{25} 2.466. Mp −60.5°. Bp 40.5°. ΔH_f° −429 kJ mol^{-1}.
▷ Reacts violently with H_2O. EF9350000.

Burbank, R.D. *et al*, *J. Chem. Phys.*, 1957, **27**, 981 (*cryst struct*)

BrF_5NRe IC-001661

Rhenium(*VII*) bromoimide pentafluoride
[Bromamidato(2−)]pentafluororhenium(VII), *12CI*
[107605-54-9]

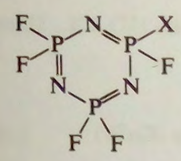
$ReF_5(NBr)$

M 375.1
Synth. from ReF_3N and BrF_3. Deep purple hygroscopic solid. Mp 140°. Subl. 150° *in vacuo*.

Fawcett, J. *et al*, *J. Chem. Soc., Dalton Trans.*, 1987, 567 (*synth, ir*)

$BrF_5N_3P_3$ IC-001662

2-Bromo-2,4,4,6,6-pentafluoro-2,2,4,4,6,6-hexahydro-1,3,5,2,4,6-triazatriphosphorine, 9CI, 8CI
Bromopentafluorocyclotriphosphonitrile. Bromopentafluorocyclotriphosphazene. 2-Bromo-2,4,4,6,6-pentafluoro-2λ⁵,4λ⁵,6λ⁵-cyclotriphosphaza-1,3,5-triene. 2-Bromo-2,4,4,6,6-pentafluoro-1,3,5,2λ⁵,4λ⁵,6λ⁵-triazatriphosphinine
[17022-75-2]



X = Br

M 309.8
Synth. from $P_3N_3Br_6$ + AgF. Colourless liq., fumes in moist air. Bp 97°. Selectively reactive to nucleophiles at Br.

Steger, E. *et al*, *J. Inorg. Nucl. Chem.*, 1967, **29**, 1812 (*synth, gc, ir*)
Glemser, O. *et al*, *J. Chem. Soc., Chem. Commun.*, 1969, 282 (*synth, ir, F-19 nmr*)

Roesky, H.W. *et al*, *Z. Naturforsch., B*, 1974, **29**, 174 (*reactions*)

BrF_5OSe IC-001663

Selenium(*VI*) fluoride hypobromite ($SeF_5(OBr)$)
[40217-25-2]

$BrOSeF_5$

M 269.8
Formed from $(F_5SeO)_3Br$ + Br_2. Red liq. Mp −85°. Bp 67°.

Seppelt, K., *Chem. Ber.*, 1972, **106**, 157 (*synth, ir, ms*)

BrF_5S IC-001664

Sulfur(*VI*) bromide fluoride ($SBrF_5$)
Sulfur bromide pentafluoride. Bromopentafluorosulfur
[15607-89-3]

$BrSF_5$ (C_{4v})

M 206.9
Interatomic distances: F—S 159.7, S—Br 219.0 pm. Formed by reaction of S_2F_{10} + Br_2. Colourless gas. Mp −79°. Bp 3.1°. Dec. at 150° to SF_6, SF_4, Br_2.

Neuvar, E.W. *et al*, *J. Chem. Phys.*, 1963, **39**, 596 (*struct*)
Kovacina, T.A. *et al*, *J. Fluorine Chem.*, 1976, **7**, 430 (*synth*)
Gmelin Handbook Inorg. Chem., Syst. No. 9, *Suppl. Vol.*, 1978, B2, 300 (*bibl*)

BrF_5Sn_3 IC-001665

Tin bromide fluoride (Sn_3BrF_5)
Tritin bromide pentafluoride. Bromopentafluorotritin
[12431-51-5]

Sn_3BrF_5

M 531.0
Sn has 3-coord. pyramidal struct. Solid struct. built up of $(Sn_{12}F_{20})_n^{4n\oplus}$ macrocations which interconnect to form infinite layers. Synth. from SnF_2 and $SnBr_2$. Colourless rod shaped cryst.

Donaldson, J.D. *et al*, *J. Chem. Soc. A*, 1969, 2358 (*synth, struct, mössbauer*)
Lari-Lavessani, A. *et al*, *Compt. Rend. Hebd. Seances Acad. Sci. Sect. C*, 1975, **281**, 535 (*synth, cryst struct*)

Claudy, P. *et al*, *J. Fluorine Chem.*, 1981, **18**, 203 (*cryst struct*)

$BrF_5Ta^{\ominus}$ IC-001666

Bromopentafluorotantalate(*V*)(1−), 11CI
[35220-71-4]

$[TaBrF_5]^{\ominus}$ (C_{4v})

M 355.8 (ion)
Octahedral anion. A number of mixed halide complexes $[TaX_5Y]^{\ominus}$ are formed in the same way.
H compd.: [98538-90-0].
BrF_5HTa M 356.8
Synth. as the $(Et_2O)_2H$ salt by dissolving TaF_5 in Et_2O saturated with HBr. Light yellow hygroscopic solid + $2Et_2O$. Sol. DMF; sl. sol. MeCN, Me_2CO, alcohols. Adducts with Py or ethylenediamine are also formed.

Buslaev, Yu.A. *et al*, *Dokl. Akad. Nauk SSSR, Ser. Khim.*, 1971, **20**, 99; *CA*, **76**, 52623u (*nmr*)
Papadimitriou, C. *et al*, *J. Less-Common Met.*, 1985, **108**, 217 (*synth, ir*)

IC-001667

BrF_4Te

Tellurium(*VI*) bromide fluoride ($TeBrF_5$)

Tellurium bromide pentafluoride. Bromopentafluorotellurium

[21975-45-1]

$BrTeF_5$ (C_{4v})

M 302.4

Synth. from TeF_4 + Br_2. Red liq., stable at −78°.

Lawlor, L. *et al, Inorg. Chem.*, 1979, **18**, 2921 (*synth, ir, raman, F-19 nmr*)

Lawlor, L., *Diss. Abstr. Int., B*, 1981, **42**, 2362 (*synth, ir, raman*)

IC-001668

$BrF_4^{\ominus}$

Hexafluorobromate(*V*)(1−)

[56713-48-5]

$[BrF_6]^{\ominus}$ (O_h)

M 193.8 (ion)

▷ Reacts explosively with H_2O.

Cs salt: [26222-92-4].

$BrCsF_6$ M 326.8

Colourless cryst. Dec. on heating. Representative of the alkali metal salts.

Me_4N salt: [35064-02-9].

Hazardous synth. from $[Me_4N]F$ and $CsBrF_6$ in MeCN. White cryst. (slowly dec. at r.t., possibly to BrF_4 salt). Dec. at 220°.

Bougon, R. *et al, Compt. Rend. Hebd. Seances Acad. Sci. Sect. C*, 1971, **272**, 565 (*ir, raman*)

Meinert, H. *et al, Z. Chem.*, 1971, **11**, 469 (*raman, synth, salts*)

Christie, K.O. *et al, Inorg. Chem.*, 1989, **28**, 3275 (*synth, F-19 nmr, Cs salt, raman*)

Wilson, W.W. *et al, Inorg. Chem.*, 1989, **28**, 4172 (*synth, ir, Me_4N salt*)

IC-001669

$BrF_4^{\oplus}$

Hexafluorobromine(I+)

[51063-27-5]

$[BrF_4]^{\oplus}$

M 193.8 (ion)

Octahedral, Br—F 169 pm. Colourless ion, powerful fluorinating agent. Readily oxidises O_2 and Xe (g).

▷ Reacts violently with H_2O.

Hexafluoroarsenate: [51063-29-7].

$AsBrF_{12}$ M 382.8

Synth. from BrF_3 and $[KrF]AsF_6$ in BrF_3. White solid.

Hexafluoroantimonate: [53432-26-1].

$BrF_{10}Sb$ M 429.6

Synth. from $BrF_4[Sb_2F_{11}]$ in BrF_3 and KrF_2. White solid + < 1 SbF_5.

μ-Fluorodecafluorodiantimonate: [51063-28-6].

$BrF_{17}Sb_2$ M 646.3

Synth. from BrF_3 and $[Kr_2F_3][SbF_6]$ in BrF_3. White solid.

[52707-24-1]

Gillespie, R.J. *et al, Inorg. Chem.*, 1974, **13**, 1230 (*synth, F-19 nmr, raman*)

Christie, K.O. *et al, Inorg. Chem.*, 1975, **14**, 694 (*struct, synth, ir*)

IC-001670

BrF_5NS

Sulfur(*VI*) bromofluoroamide fluoride ($S(NBrF)F_4$)

Sulfur bromofluoramide pentafluoride. (Bromafluoramido) pentafluorosulfur, 11CI

[90388-94-6]

$BrN(F)SF_5$

M 239.9

Synth. from $F_4S{=}NF$ + Br_2 + KF. Pale green liq., mod. stable at 20°.

O'Brien, B.A. *et al, Inorg. Chem.*, 1984, **23**, 2188 (*synth, F-19 nmr*)

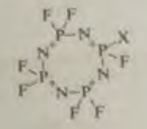
IC-001671

$BrF_7N_4P_4$

2-Bromo-2,4,4,6,6,8,8-heptafluoro-2,2,4,4,6,6,8,8-octahydro-1,3,5,7,2,4,6,8-tetrazatetraphosphocine, 8CI

Bromoheptafluorocyclotetraphosphanitrile. Bromoheptafluorocyclotetraphosphazene. 2-Bromo-2,4,4,6,6,8,8-heptafluoro-2λ⁵,4λ⁵,6λ⁵,8λ⁵-cyclotetraphosphaza-1,3,5,7-tetraene

[23208-37-9]



X = Br

M 392.8

Synth. by reaction of $P_4N_4F_7(NMe_2)$ + HBr. Liq. Bp 134°.

Chivers, T. *et al, J. Chem. Soc. A*, 1970, 2324 (*synth, F-19 nmr*)

IC-001672

$BrF_{15}O_5Se_3$

Tris(pentafluorooxyselenato)bromine

Bromine(III) pentafluorooxyselenate

[39989-16-7]

$Br(OSeF_5)_3$

M 649.7

Formed from BrF_3 + $HOSeF_5$. Yellow viscous liq. Mp 19° $Bp_{0.2}$ 43°.

Seppelt, K., *Chem. Ber.*, 1973, **106**, 157, 1920 (*synth, F-19 nmr, ir, ms*)

IC-001673

BrGa

Gallium(*I*) bromide (GaBr)

[22655-59-0]

GaBr

M 149.6

Known as gas-phase sp. Synth. from Ga + $GaBr_3$ or generated in electrothermal carbon furnace. Important sp. in chemical vapour transport of GaAs. ΔH_f° −17.6 kJ mol^{-1}; S° 251.5 J K^{-1} mol^{-1}.

Faktor, M.M. *et al, J. Chem. Soc., Faraday Trans. 1*, 1977, **73**, 1446 (*thermodyn props, use*)

Pfaffe, S. *et al, Z. Naturforsch., A*, 1978, **33**, 1386 (*microwave*)

Tsunoda, K. *et al, Spectrochim. Acta, Part B*, 1980, **35**, 715 (*ir, use*)

Rajappan Naiv, K.P. *et al, Chem. Phys. Lett.*, 1981, **80**, 149 (*microwave*)

IC-001674

BrGaO

Gallium bromide oxide (GaBrO)

Gallium(III) oxide bromide

GaBrO

M 165.6

Synth. from Ga_2O_3 and $GaBr_3$ at 230-250°. White solid. Mod. sol. H_2O; insol. alcohols, ethers, hydrocarbons. Mp 230° dec.

Hahn, H. *et al, Z. Anorg. Allg. Chem.*, 1963, **321**, 85 (*synth, props, powder struct*)

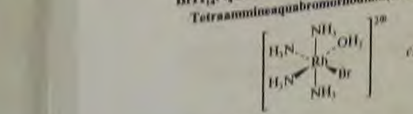
$BrH_{12}N_4ORh^{2\oplus}$ IC-001695

Tetraamminesquabromorhodium(*III*)(2+), 1OCl



cis-form

M 268.9 (ion)
Octahedral cation.

cis-form [71382-14-4]

Dithionate: [71382-16-6].
Synth. from *cis*-$[Rh(NH_3)_4Br_2]Br·\frac{1}{2}H_2O$, Ag_2O and $Na_2S_2O_4$. Light orange prisms.

trans-form [71424-39-0]

Dithionate: [71424-41-4].
Analogous synth. to *cis*-form using *trans*-$[Rh(NH_3)_4Br_2]Br·\frac{1}{2}H_2O$. Transparent red-brown prisms. Sol. H_2O.

Skibsted, L.H. *et al, Inorg. Chem.*, 1979, **18**, 3171 (*synth, uv, photochem*)

$BrH_{15}N_5Os^{2\oplus}$ IC-001696

Pentaamminebromoosmium(*III*)(2+)

[43031-58-9]

$[OsBr(NH_3)_5]^{2\oplus}$

M 355.2 (ion)
Dibromide: Osmium(III) *bromide pentaammine*
Synth. from $[Os(NH_3)_5(N_2)](ClO_4)_2$ and $H_3Ce(ClO_4)_6$ followed by addition of conc. HBr. λ_{max} 314 nm (ε 1870).

BrHf IC-001699

Hafnium bromide (HfBr), 11Cl

[49681-62-1]

HfBr

M 258.3
Layer struct. Synth. by heating $HfBr_4$ and Hf at 480-580° and 30-40 atm. Black, graphite-like solid.

Marek, G.S. *et al, Russ. J. Inorg. Chem. (Engl. Transl.)*, 1979, **24**, 890 (*synth, struct*)

BrHgI IC-001700

Mercury bromide iodide (HgBrI)

[13444-76-3]

HgBrI

M 407.3
Exists in soln. in equilibrium with $HgBr_2$ and HgI_2. Synth. from $HgBr_2$ and HgI_2. Bright yellow phototropic cryst.; melts to orange liq. Insol. H_2O, org. solvs., cold acids.

Eliezer, I., *J. Phys. Chem.*, 1964, **68**, 2722 (*equil const*)

$BrHg_2P_3$ IC-001701

Mercury bromide phosphide (Hg_2BrP_3)

[39317-05-0]

Hg_2BrP_3

M 574.0
Synth. from $HgBr_2$, Hg and P under pressure and at 500°. Semiconductor. Black cryst. Insol. strong acids. Dec. at 400°.

Donohue, P.C., *J. Solid State Chem.*, 1973, **6**, 587 (*synth, powder struct*)

BrI IC-001702

Iodine bromide (IBr)

Iodine monobromide

[7789-33-5]

IBr

M 206.8
I—Br 248.5 pm. Dark red solid. d_4^{0} 4.414. Mp 41°. Bp 116° dec. ΔH_f° = 10.5 kJ mol^{-1}. Ir ν 269 cm^{-1}.

$BrI_3^{\ominus}$ IC-001703

Bromodoiodate(*I*)(1−)

[14791-50-5]

$[Br—I—I]^{\ominus}$

M 333.7 (ion)
I—I 278; I—Br 291 pm; angle BrII 178°. Forms dark red salts. Dissociates in H_2O.

Cs salt: [15801-94-2].
Synth. from CsBr and I_2 in H_2O at 25°. Dark cherry-red cryst. Mp 71° dec.

Me_4N salt: [50725-69-4].
Synth. from Me_4NBr and I_2 in hot EtOH. Dark red cryst. Mp 143°.

[102649-02-5]

Inorg. Synth., 1957, **5**, 167 (*synth*)
Carpenter, G.B., *Acta Crystallogr.*, 1966, **20**, 330.

$BrI_4^{\ominus}$ IC-001704

Bromotetraiodate(1−)

Tetraiodobromide

$[I_2—Br—I_2]^{\ominus}$

M 587.5 (ion)
Bent struct. postulated.

Me_4N salt: [102073-76-7].
Synth. from $[Me_4N]Br$ and I_2 in boiling EtOH. Brilliant metallic green rhombic plates. Mp 124.5°.

Chattaway, F.D. *et al, J. Chem. Soc.*, 1923, **123**, 654 (*synth, Me_4N salt*)
Nour, E.M. *et al, J. Phys. Chem.*, 1986, **90**, 2841 (*ir, raman*)

$BrI_6^{\ominus}$ IC-001705

Hexaiodobromate

Bromohexaiodate

Struct. unknown

M 841.3 (ion)

Me_4N salt: Synth. from $[Me_4N]BrI_4$ and I_2 in I_2 saturated boiling EtOH. Metallic dark green plates. Mp 109°.

Chattaway, F.D., *J. Chem. Soc.*, 1923, **123**, 654 (*synth*)

BrIn IC-001706

Indium(*I*) bromide (InBr)

[14280-53-6]

InBr

M 194.7
Has yellow TlI struct. with 5-coord. (square pyramidal) In. Synth. from In + $HgBr_2$ at 350°. Red solid. Mp 285°.

Stephenson, N.C. *et al, Aust. J. Sci. Res., Ser. A*, 1950, 580 (*cryst struct*)

BrInS IC-001708

Indium(*III*) bromide sulfide (InBrS)

[75492-08-9]

InBrS

M 226.7
Has $CdCl_2$ struct. Synth. from $InBr_3$ and In_2S_3 at 200-225°. Bright grey cryst. Slow dec. in H_2O. Dec. in acids.

Hahn, H. *et al, Z. Anorg. Allg. Chem.*, 1960, **304**, 100; 1962, **314**, 307 (*synth, props, struct*)

BrInSe IC-001709

Indium(*III*) bromide selenide (InBrSe)

InBrSe

M 273.6
Has $CdCl_2$ struct. Synth. from $InBr_3$ and In_2Se_3 at 380-440°. Brown cryst. Slow dec. in H_2O. Dec. by acids. Mp 690-750°.

Hahn, H. *et al, Z. Anorg. Allg. Chem.*, 1960, **304**, 100; 1962, **314**, 307 (*synth, props, powder struct*)
Kniep, R. *et al, Z. Naturforsch., B*, 1981, **36**, 1520 (*phase diagram*)

BrInTe IC-001710

Indium(III) bromide telluride (InBrTe)

[74403-78-4]

InBrTe

M 322.3
Monoclinic layer struct. has trigonal pyramidal coordn. at Te and In_2Te_2Br tetrahedra which share corners and Te—Te edges. Synth. from $InBr_3$ and In_2Te_3 melt. Yellow brown cryst. Slow dec. by H_2O, dec. by acids. Mp 470-510°. E_g 2.45 eV. Ext. compd. In_2Te_2Br. Mp 381°, also dimer.

Hahn, H. *et al*, *Z. Anorg. Allg. Chem.*, 1960, **304**, 100; 1962, 314, 307 (*synth, propr, struct*)

BrK IC-001711

Potassium bromide (KBr), 8CI

[7758-02-3]

KBr

M 119.0
NaCl struct. Synth. either by action of Br_2 on KOH followed by reduction using HCOOH or by neutralisation of KOH or K_2CO_3 with HBr. Commercially available. Used as cell windows for ir spectroscopy. Used in photographic developers, pharmaceuticals and as a bromination agent in org. synth. Formerly used as a sedative. Sl. hygroscopic colourless cubic cryst. V. sol. H_2O (53 g per 100 cm^3 at 0°; 102 g per 100 cm^3 at 100°); spar. sol. EtOH (0.14 g per 100 cm^3 at 25°). Et_2O. Mp 734°. Bp 1435°. ΔH_f° −393.8 kJ mol^{-1}; ΔG_f° −380.4 kJ mol^{-1}; S° 95.9 J K^{-1} mol^{-1}.

▷ Irritant. TS7650000.

$BrKO_3$ IC-001712

Potassium bromate(V) ($KBrO_3$)

Bromic(V) acid, potassium salt, 8CI

[7758-01-2]

$KBrO_3$

M 167.0
Synth. by neutralisation of K_2CO_3 with aq. $HBrO_3$. Commercially available. Powerful brominating agent for deactivated aromatics in sulfuric acid. Also used as an oxidising agent. Colourless hexagonal cryst. Sol. H_2O (13 g per 100 cm^3 at 40°; 50 g per 100 cm^3 at 100°); spar. sol. EtOH; insol. Me_2CO. Mp 434°. ΔH_f° −360 kJ mol^{-1}; ΔG_f° −271 kJ mol^{-1}; S° 149 J K^{-1} mol^{-1}. Pyroelectric.

▷ Oxidiser, toxic, cancer suspect agent. EF8725000.

$BrKO_4$ IC-001713

Potassium perbromate ($KBrO_4$)

Potassium bromate(VII). Perbromic acid, potassium salt, 8CI

[22207-96-1]

$KBrO_4$

M 183.0
Isotypic with $BaSO_4$. Synth. by oxidation of $KBrO_3$ with F_2 in alkaline soln. Orthorhombic cryst. Dec. on heating by oxygen loss forming $KBrO_3$. ΔH_f° −288 kJ mol^{-1}; ΔG_f° −175 kJ mol^{-1}; S° 170 J K^{-1} mol^{-1}. Dec. at 280°.

▷ Oxidiser.

BrLi IC-001715

Lithium bromide (LiBr), 8CI

[7550-35-8]

LiBr

M 86.8
NaCl struct. Prepd. by slow neutralisation of Li_2CO_3 with aq. HBr; crystallises as the hydrate. Commercially available. Powerful desiccant used in air conditioning and industrial drying systems. Deliquescent white cubic cryst. V. sol. H_2O (145 g per 100 cm^3 at 4°; 254 g per 100 cm^3 at 90°), EtOH (73 g per 100 cm^3 at 40°); mod. sol. MeOH, EtOH, Me_2CO; spar. sol. Py. Mp 550°. Bp 1265°. ΔH_f° −350.9 kJ mol^{-1}; ΔG_f° −341.6 kJ mol^{-1}; S° 74.1 J K^{-1} mol^{-1}.

▷ OJ5755000.

Monohydrate: [23303-71-1].
BrH_2LiO M 104.8
Commercially available. White orthorhombic cryst.; transforms to cubic polymorph. at 33°; dec. on heating with H_2O loss (−H_2O at 165°). V. sol. H_2O (246 g per 100 cm^3 at 20°); sol. EtOH. ΔH_f° −663 kJ mol^{-1}; ΔG_f° −594 kJ mol^{-1}; S° 110 J K^{-1} mol^{-1}.

Dihydrate: [13453-70-8].

BrH_4LiO_3 M 122.8
Colourless cryst.; dec. on heating with H_2O loss (−H_2O at 160°). V. sol. H_2O (246 g per 100 cm^3 at 20°); sol. EtOH. ΔH_f° −963 kJ mol^{-1}; ΔG_f° −841 kJ mol^{-1}; S° 162 J K^{-1} mol^{-1}.

BrN_4OP IC-001726

Phosphorodiazidic bromide, 10CI

Diazidobromophosphine oxide

Diazidobromooxophosphorus(V)

[69715-82-8]

(N$_3$)$_2$P(O)Br

M 210.9

Not purif. Synth. from $POBr_3$ + NaN_3/MeCN.

▷ Presumed explosive.

Dillon, K.B. *et al*, *Inorg. Nucl. Chem. Lett.*, 1978, **14**, 511 (*synth, P-31 nmr*)

BrN_4P IC-001727

Phosphorodiazidous bromide, 10CI

Diazidobromophosphine. Diazidobromophosphorus(III)

[69715-78-2]

(N$_3$)$_2$PBr

M 194.9

Not purif. Synth. from PBr_3 + NaN_3/MeCN.

▷ Presumed explosive.

Dillon, K.B. *et al*, *J. Chem. Soc., Dalton Trans.*, 1980, 1036 (*synth, P-31 nmr*)

BrN_4PS IC-001728

Phosphorodiazidothioic bromide, 10CI

Diazidobromophosphine sulfide. Diazidobromothiooxophosphorus(V)

[69715-80-6]

(N$_3$)$_2$P(S)Br

M 226.9

Not purif. Synth. from $PSBr_3$ + NaN_3/MeCN.

▷ Presumed explosive.

Dillon, K.B. *et al*, *Inorg. Nucl. Chem. Lett.*, 1978, **14**, 511 (*synth, P-31 nmr*)

BrNa IC-001729

Sodium bromide (NaBr), 8CI

[7647-15-6]

NaBr

M 102.8

NaCl struct. Synth. by neutralisation of NaOH or Na_2CO_3 with aq. HBr initially as dihydrate. Commercially available. Hygroscopic colourless cubic cryst. V. sol. H_2O (116 g per 100 cm^3 at 50°; 121 g per 100 cm^3 at 100°). Mp 747°. Bp 1390°. ΔH_f° −361.4 kJ mol^{-1}; ΔG_f° −349.3 kJ mol^{-1}; S° 86.8 JK^{-1} mol^{-1}.

▷ Irritant. VZ3150000.

Dihydrate: [13466-08-5].

Cryst. from aq. solns. of NaBr. Colourless monoclinic cryst. Dec. on heating with H_2O loss (−2H_2O at 51°). V. sol. H_2O (79 g per 100 cm^3 at 25°). ΔH_f° −952 kJ mol^{-1}; ΔG_f° −828 kJ mol^{-1}; S° 179 JK^{-1} mol^{-1}.

$BrNaO_3$ IC-001730

Sodium bromite

Sodium bromate(III). *Bromic*(III) *acid, sodium salt. Bromous acid, sodium salt, 8CI*

[7486-26-2]

NaBrO$_2$

M 134.8

Desizing agent. Selective reagent for the oxidation of sulfides and alcohols. Unstable, readily dec. releasing O_2. Partially stabilised by cocrystallisation with NaOH. V. sol. H_2O (28 g per 100 cm^3 at 0°; 91 g per 100 cm^3 at 100°); insol. EtOH.

Trihydrate:

BrH_4NaO_5 M 188.9

Cryst. from aq. 2*M* NaOH soln. containing $NaBrO_2$. Commercially available. Mild oxidising agent. Colourless cryst. Dehydrates at r.t. *in vacuo* to give anhyd. $NaBrO_2$.

$BrNaO_3$ IC-001731

Sodium bromate(*V*)

Bromic(V) *acid, sodium salt, 8CI*

[7789-38-0]

NaBrO$_3$

M 150.8

Isostructural with $NaClO_3$. Manuf. by electrolysis of aq. NaBr. Synth. (with NaBr) by adding bromine to aq. NaOH. Also prepared by mixing aq. solns. of Na_2SO_4 and $Ba(BrO_3)_2$. Commercially available. Component of oxidising solns. Used to set hair. Component of the Belousov-Zhabotinskii oscillating reaction (malonic acid, H_2SO_4, $Ce_2(SO_4)_3$, [or $[Fe(bipy)_3]^{2\oplus}$] and $NaBrO_3$). Colourless cubic cryst. Dec. on heating with O_2 evolution and formation of NaBr. V. sol. H_2O (28 g per 100 cm^3 at 0°; 91 g per 100 cm^3 at 100°); insol. EtOH. ΔH_f° −334 kJ mol^{-1}; ΔG_f° −243 kJ mol^{-1}; S° 129 JK^{-1} mol^{-1}.

$BrNbO_2$ IC-001732

Niobium(*V*) bromide oxide ($NbBrO_2$), 11CI

Niobium bromide dioxide

[103124-85-2]

NbO$_2$Br

M 204.8

Synth. by heating Nb foil, Nb_2O_5 and Br_2 in a sealed tube at 450/400°. Yellow solid. Dec. at 500° to Nb_2O_5 and $NbOBr_3$.

Schaefer, H. *et al*, *Z. Anorg. Allg. Chem.*, 1986, **534**, 209 (*synth, props*)

BrNbSe IC-001733

Niobium bromide selenide (NbBrSe), 10CI

[79845-45-7]

NbBrSe

M 251.7

Struct. probably analogous to corresp. iodide (Niobium iodide selenide (NbISe), IC-020182), with cube-like core. Synth. by heating Nb_2Br_5, Nb and Se to 800°. Cryst.

Fedorov, V.E. *et al*, *Russ. J. Inorg. Chem. (Engl. Transl.)*, 1981, **26**, 1447 (*synth, cryst struct, dia*)

BrO IC-001734

Bromine oxide (BrO), 11CI

[15656-19-6]

[Br—O]

M 95.9

Free radical, studied in vapour phase. Formed by flash photolysis of $BrO_2^\ominus$. Dec. to Br_2 + O_2.

Clyne, M.A.A. *et al*, *Trans. Faraday Soc.*, 1966, **62**, 1175 (*reactions*)

BrOPu IC-001736

Plutonium(*III*) bromide oxide (PuBrO)

Plutonium(III) *oxobromide*

[49788-72-9]

PuOBr

M 334.9

8-Coordinate, with the PbFCl struct. Synth. from PuO_2 + HBr at 750°. Green solid. Insol. H_2O; sol. dil. acid. ΔH_f −867 kJ mol^{-1}.

Zachariasen, W.H., *Acta Crystallogr.*, 1949, **2**, 388 (*cryst struct*)

Weigel, F. *et al*, *J. Less-Common Met.*, 1982, **84**, 147 (*thermodyn*)

Fuger, J., *ACS Symp. Ser.*, 1983, **216**, 75 (*synth*)

BrOTl IC-001737

Thallium(*III*) bromide oxide (TlBrO)

Thallium oxide bromide. Thallium oxybromide

[14922-04-4]

Tl(OBr)

M 300.2

Isostructural with InOBr (FeOCl). Synth. from $TlBr_3$ + O_3; Tl_2CO_3 + (l) Br_2. Luminescent substance for identifying screens for radiography. Solid, dec. at 230° to give Tl_2O, O_2, Br_2. Forms solid solns. with lanthanum and lead oxybromides.

▷ Highly toxic.

Kauffmann, V.S. *et al*, *Z. Anorg. Allg. Chem.*, 1966, **347**, 318 (*synth*)

Ger. Pat., 2 461 260, (1976) (*use*)

BrOV IC-001738

Vanadium(*III*) bromide oxide (VBrO)

Bromooxovanadium(III)

[13520-88-2]

VOBr

M 146.8

Struct. comprises *trans*-VO_4Br_2 octahedra: all of the atoms are shared; O with 4V, Br with 2V. Synth. from excess VBr_3 and As_2O_3 in a sealed tube at 400°. Various species, including Li, ferrrocene and pyridines may be intercalated. Violet solid.

Li intercalate:

BrLiOV M 153.7

From parent compd. + LiBu or by electrolysis. Cathode in Li batteries. Actual composition $Li_{0.8}VOBr$.

BrOZr IC-001739

Zirconium bromide oxide (ZrBrO), 11Cl

[87335-97-5]

ZrBrO

M 187.1

Non-stoichiometric with respect to oxygen over the range $BrOZr$ to $BrO_{0.45}Zr$. The ZrBr struct. is retained with oxide in distorted tetrahedral sites between the Zr layers, with random occupancy (ZrBr has the layer sequence Br—Zr—Zr—Br). Synth. by heating ZrO_2 and ZrBr in a sealed tantalum container typically at 1025° for 7 days. Bronze solid.

Seaverson, L.M. *et al, Inorg. Chem.*, 1983, **22**, 3202 (*synth, cryst struct*)

BrO_2 IC-001740

Bromine oxide (BrO_2), 10Cl, 9Cl

Bromine dioxide

[21255-83-4]

$[BrO_2]_n$

M 111.9

Probably polymeric as solid. Synth. from $Br_2 + O_3$ in $CFCl_3$ at −30° Dark-yellow solid. Dec. at 0° to $Br_2 + O_2$.

▷ May explode if heated rapidly.

Dimer: see Bromine oxide (Br_2O_4), IC-001870

BrO_3Tl IC-001746

Thallium(*I*) bromate ($Tl(BrO_3)$)

$Tl[BrO_3]$

M 332.2

Solid, dec. at 120° to Tl_2O_3, Br_2, O_2. Sl. sol. H_2O (0.49 g per 100 cm^3 at 30°). ΔH_f° −136.4 kJ mol^{-1}; ΔG_f° −53.1 kJ mol^{-1}.

▷ Highly toxic.

Khoo, K.H., *J. Inorg. Nucl. Chem.*, 1968, **30**, 2425; 1969, **31**, 9437.

BrO_4Rb IC-001747

Rubidium perbromate ($RbBrO_4$)

Rubidium bromate(VII). *Bromic*(VII) *acid, rubidium salt. Perbromic acid, rubidium salt, 8CI*

[24402-68-4]

$RbBrO_4$

M 229.3

Perbromates were first obtained by radioactive β decay of ^{83}Se to ^{83}Br. Isotypic with $BaSO_4$. Prepd. by oxidation of $RbBrO_3$ with XeF_2 in aq. soln. Also obt. by neutralisation of $HBrO_4$, prepd. by preparative ion-exchange chromatography, with an aq. soln. of RbOH. Colourless orthorhombic cryst. V. sol. H_2O. Dec. at 291°.

▷ Oxidiser.

BrSSb IC-001750

Antimony bromide sulfide (SbBrS), 9Cl, 8CI

Bromothioxostibine. Bromothioxoantimony(III)

[14794-85-5]

BrSb=S

M 233.7

Orthorhombic (at r.t.). The Sb is 7 coordinated by Br (×4) and S (×3) (Sb—Br 293.7, 363.3, Sb—S 247.3-267.1 pm) forming pleated chains of $(Sb)_n^{n\oplus}$ between which are the $Br^{\ominus}$ anions. Synth. from Sb + S + Br_2, or from Sb_2S_3 + $SbBr_3$ in Br_2 at 200-285° and 30-270 atm. Orange prisms or needles. Mp 330° dec. Photoconductive and ferroelectric. Undergoes phase transitions at −95° and −182°. Dec. at Mp → Sb_2S_3 + $SbBr_3$. Exhibits anomalous electrooptical and electromechanical props. under visible light.

[82546-48-3]

$TaBrS_2$

M 324.9

Struct. unknown. Synth. by disproportionation of Tantalum(*V*) bromide sulfide ($TaBr_3S$), IC-001985 at 170°. Black solid.

bin Baba, I., *Sains Malays.*, 1981, **10**, 29 (*synth, ir*)

IC-001753

BrSbSe

Antimony bromide selenide (SbBrSe), 9CI, 8CI

Bromoselenoxostibine. Bromoselenoxoantimony(III)

[19445-24-0]

BrSb=Se

M 280.6

Orthorhombic. Synth. from Br + Sb + Se in gas phase; or solvo-thermally at 210-300°/30-290 atm. in Br_2 or HBr. Black needles. Mp 250°. Photoelectric.

Klazar, J. *et al, Collect. Czech. Chem. Commun.*, 1968, **33**, 973 (*synth, props*)

Horák, J. *et al, Krist. Tech.*, 1968, **3**, 241 (*synth, photoelectric props*)

Popolitov, V.I. *et al, Phys. Status Solidi A*, 1970, **3**, K1 (*synth*)

IC-001754

BrSeTl

Thallium(*III*) bromide selenide (TlBrSe)

Thallium selenide bromide. Thallium(III) *selenobromide*

TlSeBr

M 363.2

Two forms identified depending on prep. Two synth. methods: (i) TlBr + Se at 280° in sealed tube (40 hr), (ii) Tl + Se_2Br_2 at 280°, sealed tube (140 hr). This method gives a product containing Tl(*I*). Solid, dec. with alkalis and hot acids; purif. by zone refining. Insol. H_2O, org. solvs. Mp 220°.

▷ Highly toxic.

Batsanov, S.S. *et al, Dokl. Akad. Nauk SSSR, Ser. Khim.*, 1966, **167**, 89; 1964, **158**, 1355 (*synth*)

IC-001755

$BrSe_2Ta$

Tantalum(*V*) bromide selenide ($TaBrSe_2$), 11CI

[82546-49-4]

$TaBrSe_2$

M 418.7

Struct. unknown. Synth. by disproportionation of Tantalum(*V*) bromide selenide ($TaBr_3Se$), IC-001988 at 180°. Black solid.

bin Baba, I., *Sains Malays.*, 1981, **10**, 29 (*synth, ir*)

IC-001756

$BrTe_2$

Tellurium bromide (Te_2Br)

Ditellurium bromide. Tellurium subbromide

[12514-37-3]

Te_2Br

M 335.1

Polymeric chain-type struct. with bridging Br atoms. Formed from Te + Br_2 at 300°. Grey needles, stable in air.

Rabenau, A. *et al, Angew. Chem.*, 1970, **82**, 811 (*synth*)

Kniep, R. *et al, Z. Anorg. Allg. Chem.*, 1976, **422**, 17 (*cryst struct*)

IC-001757

BrTl

Thallium(*I*) bromide (TlBr)

[7789-40-4]

TlBr

M 284.2

Has CsCl struct., becomes metallic at high pressures. Synth. from acidified solns. of Tl(*I*) salts by addn. of $Br^{\ominus}$. Air-stable light-sensitive yellow solid. Spar. sol. H_2O. Mp ~460°. Bp 815°. Oxid. by Br_2 to $TlBr_3$.

▷ Highly toxic. XG3850000.

IC-001758

BrY

Yttrium bromide (YBr)

Yttrium monobromide

[17655-40-2]

YBr

M 168.8

Has ZrCl struct. with Y_6 octahedra linked into sheets. Synth. from YBr_3 + Y at 780-950°. Can be intercalated with Li. Black plates; chemiluminescent in vapour phase.

Mattausch, H. *et al, Inorg. Chem.*, 1980, **19**, 2128 (*synth, struct*)

IC-001759

BrZr

Zirconium bromide (ZrBr), 11CI

[31483-18-8]

ZrBr

M 171.1

Structure comprises slabs of four close-packed layers X—Zr—Zr—X, the slabs repeating (A,C,B) (*cf.* ZrCl where the repeat is ABC). Synth. by heating in a temp. gradient over several d. $ZrBr_4$ + Zr turnings in a sealed Ta ampoule. Behaves as a 2-D metal with conductivities ~55 ohm $^{-1}$ cm^{-1} parallel to sheets and 10^{-3} ohm^{-1} cm^{-1} perpendicular to sheets. Pauli paramagnetic; much harder than ZrCl. Black solid.

Daake, R.L. *et al, Inorg. Chem.*, 1977, **16**, 2029 (*synth, cryst struct, pe*)

Corbett, J.D., *Inorg. Chem.*, 1983, **22**, 2669 (*pe*)

Inorg. Synth., 1983, **22**, 26 (*synth, rev*)

IC-001760

$Br_2^{\oplus}$

Dibromine(1+)

[12595-71-0]

$Br_2^{\oplus}$

M 159.8 (ion)

Br—Br 215 pm. Forms scarlet salts. Dec. in H_2O.

Di-μ-fluorotetradecafluorotriantimonate(1−): [11088-93-0].

$Br_2F_{16}Sb_3$ M 829.0

Synth. from Br_2, $S_2O_6F_2$ and SbF_5. Moisture-sensitive bright red cryst. melts to give cherry red liq. V. sol. HSO_3F. Mp 85.5°, Mp 69°. $\mu_{eff} = 2.0\mu_B$ (80-300K). Ir ν 700s, sh, 655vs, 585w, 560w, 485m, 425w cm^{-1}.

Hexafluoroarsenate: [50960-75-3].

$AsBr_2F_6$ M 348.7

IC-001761

Br_2Ca

Calcium bromide ($CaBr_2$), 8CI

Calcium dibromide

[7789-41-5]

$CaBr_2$

M 199.8

Isostructural with $CaCl_2$. Synth. by dehydration of hexahydrate at 250° under vacuum. Alternatively pure $CaBr_2$ prepd. by reaction of calcium metal dissolved in liq. NH_3 with NH_4Br. Commercially available. Component of drilling fluids. Constit. of photothermographic papers. Colourless orthorhombic deliquescent cryst. V. sol. H_2O (142 g per 100 cm^3 at 20°); sol. EtOH, Me_2CO; spar. sol. MeOH, $CH_2ClCOOH$ (2.5 g per 100 cm^3 at 94°). Mp 742°. ΔH_f° −683 kJ mol^{-1}; ΔG_f° −664 kJ mol^{-1}; S° 130 J K^{-1} mol^{-1}.

▷ EV9328000.

Monohydrate: [62648-72-0].

Br_2CaH_2O M 217.9

Hexahydrate: [13477-28-6].

$Br_2CaH_{12}O_6$ M 307.9

Cryst. from aq. solns. of $CaBr_2$. Heat storage material, normally used in conjunction with $CaCl_2.6H_2O$. Hygroscopic colourless hexagonal cryst. Dec. on heating with H_2O loss. V. sol. H_2O (594 g per 100 cm^3 at 0°; 1360 g per 100 cm^3 at 25°); sol. EtOH, Me_2CO. Mp 34.2°. ΔH_f° −2506 kJ mol^{-1}; ΔG_f° −2153 kJ mol^{-1}; S° 410 J K^{-1} mol^{-1}.

Br_2Cd

Cadmium bromide ($CdBr_2$) IC-001762

[7789-42-6]

$CdBr_2$

M 272.2

Has CdI_2 struct. in solid state; linear molecule in gas phase. Synth. from elements or from $CdCO_3$ and HBr. Colourless hygroscopic cryst. Sol. H_2O (57 g per 100 cm^3 at 10°), EtOH (26.6 g per 100 cm^3 at 15°), Me_2CO (1.34 g per 100 g at 18°). Mp 570°. Bp 863°.

▷ EU9935000.

Monohydrate: Cryst. (H_2O at > 36°).

Tetrahydrate: [13464-92-1].

Obt. by evap. of satd. aq. solns. of $CdBr_2$. Cryst. (H_2O at < 36°). Octahedral Cd (4 Br + 2 O). Dehydrates at 36° at 1 atm.

Gmelin Handbook Inorg. Chem., Syst. No. 33, 1959, 518 (*rev, bibl*)

IC-001775

$Br_2Cl_3Cu^{3\ominus}$

Dibromotrichlorocuprate(*II*)(3−), 10Cl

$[CuBr_2Cl_3]^{3\ominus}$

M 329.7 (ion)

Square-based pyramidal geometry at Cu.

N-(2-Ammoniumethyl)piperazinium(3+) salt: [73460-63-6].
Red-orange cryst. + $1H_2O$. Mp 205° dec. μ_{eff} = 1.85 μ_B

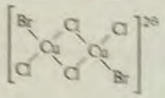
Antolini, L. *et al*, *J. Am. Chem. Soc.*, 1980, **102**, 1303 (*synth, ir, uv, magnetism*)

IC-001776

$Br_2Cl_4Cu_2^{2\ominus}$

Dibromodi-μ-chlorodichlorodicuprate(*II*)(2−), 10Cl

Dibromotetrachlorodicuprate(2−), 9Cl.
Bromodichlorocuprate(1−) dimer



M 428.7 (ion)

Presumed symmetrical dimer.

Bis-Ph_4P salt: [67577-05-3].
Deep purple cryst. Disproportionates on attempted recryst. Insol. EtOH.
Bis-Ph_4As salt: [53154-28-2].

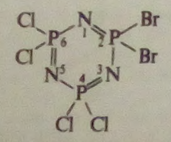
Chow, C. *et al*, *Inorg. Chem.*, 1975, **14**, 205 (*synth, magnetism*)
Estes, W.E. *et al*, *Inorg. Chem.*, 1978, **17**, 3657 (*synth, cor, uv, ir, magnetism*)

$Br_2Cl_4N_3P_3$ IC-001777

2,2-Dibromo-4,4,6,6-tetrachloro-2,2,4,4,6,6-hexahydro-1,3,5,2,4,6-triazatriphosphorine, 8CI

gem-*Dibromotetrachlorocyclotriphosphonitrile. 2,2-Dibromo-4,4,6,6-tetrachlorocyclotriphosphazene. 2,2-Dibromo-4,4,6,6-tetrachloro-2λ⁵,4λ⁵,6λ⁵-cyclotriphosphaza-1,3,5-triene. 2,2-Dibromo-4,4,6,6-tetrachloro-1,3,5,2λ⁵,4λ⁵,6λ⁵-triazatriphosphinine*

[15969-71-8]



M 436.5

Not obt. free from non-gem isomer. Synth. from PCl_5 + NH_4Cl + PBr_3 in $C_2H_2Cl_4$. Solid. Mp 136.5°.

[25323-26-6]

Coxon, G.E. *et al, J. Chem. Soc. A*, 1969, 358 (*ms*)

$Br_2Cl_{10}Ta_6^{4\oplus}$ IC-001779

Di-μ-bromodeca-μ-chlorohexatantalum(4+), 11CI

[94772-19-7]

$[Ta_6Cl_{10}Br_2]^{4\oplus}$

M 1600.0 (ion)

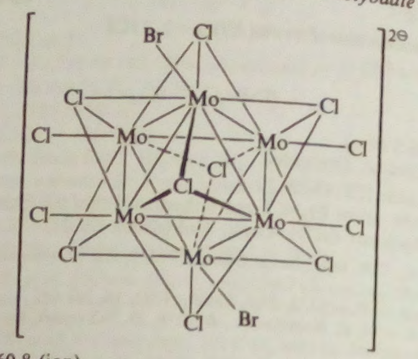
The positions of the Br atoms in the Ta_6X_{12} struct. are not known. Synth. by recryst. the $[Ta_6Br_6Cl_6]^{4\oplus}$ ion from HCl.

Schaefer, H. *et al, Z. Anorg. Allg. Chem.*, 1984, **517**, 185 (*synth*)

$Br_2Cl_{12}Mo_6^{2\ominus}$ IC-001780

Dibromoocta-μ₃-chlorotetrachlorohexamolybdate(2−), 11CI

Octakis(μ₃-chloro)dibromotetrachlorohexamolybdate



M 1160.8 (ion)

Br coordinated to two *trans*-Mo in $Mo_6Cl_8^{4\oplus}$ core cluster.

Bis-Ph_4As salt: [84220-71-3].
Cryst.

Schäfer, H. *et al, Z. Anorg. Allg. Chem.*, 1982, **491**, 275 (*cryst struct, synth*)

Br_2Co IC-001781

Cobalt(*II*) bromide ($CoBr_2$), 8CI

Cobalt dibromide

[7789-43-7]

$CoBr_2$

M 218.7

Dimorphous; has CdI_2 or $CdCl_2$ type structs. Commercially available. Green cryst. Sol. H_2O, Me_2CO, MeOH. Mp 678°. Paramagnetic.

▷ Toxic, irritant. GF9595000.

Dihydrate: [17670-82-5].
Purplish-blue solid. Prob. has octahedral polymeric struct. with 4 bridging Br.

Hexahydrate: [13762-12-4]. *Hexaaquacobalt(2+) bromide. Cobalt*(II) *bromide hexahydrate*
Red solid. Best considered as bromide salt of $[Co(OH_2)_6]^{2\oplus}$.

Sidgwick, N.V., *The Chemical Elements and their Compds.*, Oxford, 1950, 1379.
Wells, A.F., *Structural Inorg. Chem.*, 5th Ed., Oxford, 1984, 413 (*struct*)

Br_2Cr IC-001782

Chromium(*II*) bromide ($CrBr_2$)

Chromium dibromide. Chromous bromide

[10049-25-9]

$CrBr_2$

M 211.8

Distorted CdI_2 struct. in solid state. Dimeric in vapour state. Synth. from $CrBr_3$ and H_2 in presence of HBr; or by oxidation of Cr in a Br_2/H_2 stream at 800-900°. White cryst. solid. Rapidly oxidised in air. Blue in aq. soln. Sol. H_2O, EtOH. Mp 842°, 844°.

Hexahydrate: [18721-05-6]. *Hexaaquachromium(2+) dibromide. Chromium*(II) *bromide hexahydrate*
$Br_2CrH_{12}O_6$ M 319.8
Air-sensitive blue cryst.

Bis-Py complex:
$C_{10}H_{10}Br_2CrN_2$ M 370.0
Green cryst. (EtOH). More stable than hydrate.

Fergusson, J.E., *Halogen Chem.*, Academic Press, London, 1967, 3, 229.
Inorg. Synth., 1967, **10**, 26 (*synth, hydrate*)
Brauer, G., *Handbuch Präp. Anorg. Chem.*, 3rd Ed., Ferdinand Enke Verlag, 1975-1981, **3**, 1486 (*synth*)

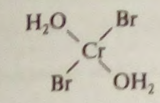
$Br_2CrH_4O_2$ IC-001783

Diaquadibromochromium(*II*)

Chromium(II) *bromide dihydrate*



M 247.8

Square planar units obt. as complex with pyridinium bromide, $[CrBr_2(OH_2)_2].2[PyH]Br$ in which the expected formulation containing octahedral $[CrBr_4(OH_2)_2]^{2\ominus}$ units is not found. See Diaquatetrabromochromate(*II*)(2−), IC-002010. Interatomic distances: Cr—Br 257.9, Cr—O 203.8 pm.

Complex with pyridinium bromide (1:2): [50774-44-2].
Pyridinium diaquatetrabromochromate(II) (*incorr.*)
$C_{10}H_{16}Br_4CrN_2O_2$ M 567.8
Synth. from $CrBr_2$ + pyridinium bromide in HOAc. Light-green air-sensitive needles (HOAc).

Babar, M.A. *et al, J. Chem. Soc., Dalton Trans.*, 1981, 27 (*deriv, synth, magnetism, uv*)
Ladd, M.F.C. *et al, J. Chem. Soc., Dalton Trans.*, 1984, 2351 (*deriv, cryst struct, synth*)

$Br_2CrH_{10}N_2O_2^{\oplus}$ IC-001784

Diamminediaquadibromochromium(*III*)(1+), 8CI

Dibromodiaquadiamminechromium(III)

$[CrBr_2(OH_2)_2(NH_3)_2]^{\oplus}$

M 281.8 (ion)

Octahedral cation. Hydrol. to Diamminetetraaquachromium(*III*)(3+), IC-017721.

all-trans-form

Bromide: Green cryst. + $1H_2O$. Sol. dil. aq. $HClO_4$.

[22941-60-2, 29560-95-0]

House, D.A., *Aust. J. Chem.*, 1969, **22**, 647 (*synth, uv, kinetics*)

Br_2CrO_2 IC-001785

Chromium(*VI*) bromide oxide ($CrBr_2O_2$)

Dibromodioxochromium, 9CI. Chromyl bromide. Chromyl dibromide

[14518-98-0]

CrO_2Br_2

M 243.8

Prepd. by reaction of CrO_2Cl_2 with excess liq. HBr at −60° to −80°. V. hygroscopic purple needles. Stable < −70°, dec. at r.t.

Zellner, H., *Monatsh. Chem.*, 1949, **80**, 317 (*synth*)

Br_2FTl IC-001793

Thallium(*III*) bromide fluoride ($TlBr_2F$)

$TlBr_2F$

M 383.1
Synth. from Br_2 + TlF soln. in HF. Dec. by H_2O, sl. hygroscopic, stable *in vacuo*.
▷ Toxic.

Pascal, P., *Nouveau Traité de Chimie Minérale*, Masson, 1961, 6, 948 (*synth, prop*)

Br_2F_3Mo IC-001794

Molybdenum(*V*) bromide fluoride ($MoBr_2F_3$), 9CI
Molybdenum dibromide trifluoride
[42075-89-8]

$MoBr_2F_3$

M 312.7
Prepd. from MoF_3 and Br_2 at 100-130°. In vacuum, dec. to $MoBr_3$, MoF_5 and Br_2 at 140-150°.

Khaldoyanidi, K.A. *et al*, *Izv. Sib. Otd. Akad. Nauk SSSR, Ser. Khim. Nauk*, 1973, 142; *CA*, **79**, 12985u (*synth*)

Br_2F_3P IC-001795

Phosphorus bromide fluoride (PBr_2F_3)
Dibromotrifluorophosphorane, 9CI.
Dibromotrifluorophosphorus(V)
[13445-58-4]

PBr_2F_3

M 247.7
Tbp struct. with eq. Br atoms; fluorines in both axial and equatorial positions at −120°, but identical at r.t. Synth. from PF_3 + Br_2. At low temps, an unstable (dec. at −15°) molecular liq. Rapidly dec. at amb. temp. in poorly polar solvs. giving PBr_3, Br_2, PF_5.

$Br_2F_4O_2Te$ IC-001798

Tellurium(*VI*) fluoride hypobromite ($TeF_4(BrO)_2$)
Tellurium tetrafluoride bis(hypobromite)
[79982-48-2]

$(BrO)_2TeF_4$

M 395.4
Synth. from $(ClO)_2TlF_4$ + Br_2. Moisture- and light-sensitive, thermally unstable.
cis-form
Red liq. Mp −31.5°. Dec. at 0°.
trans-form
Low-melting solid. Mp 23°.

Poetter, B. *et al*, *Angew. Chem., Int. Ed. Engl.*, 1981, **20**, 1036 (*synth, F-19 nmr*)

$Br_2F_{12}FeP_4$ IC-001799

Dibromotetrakis(phosphorous trifluoride)iron(*II*), 9CI
Dibromotetrakis(trifluorophosphine)iron(II)
[37410-25-6]

$FeBr_2(PF_3)_4$

M 567.5
cis-Octahedral at Fe. Synth. from $Fe(PF_3)_5$ + Br_2. Orange-red, volatile. $Subl._{0.001}$ 20°. Dec. at 65°. $^1J_{PF}$ 1355 Hz.

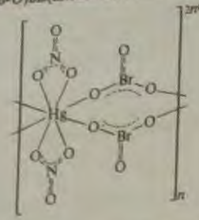
Bis(bromato-*O*)bis(nitrato-*O*,*O'*)mercurate(2−)



M 580.4 (ion)
Polymeric chain struct. with severely distorted sq. antiprismatic Hg.

Di-K salt: [80440-81-9].
From $KBrO_3$ and $Hg(NO_3)_2$ in 3*M* HNO_3. Cryst.

Aurivillius, K. *et al*, *Acta Chem. Scand., Ser. A*, 1981, **35**, 537 (*synth, cryst struct*)

Br_2HgO_6 IC-001826

Mercury(*II*) bromate ($Hg(BrO_3)_2$)

$Hg(BrO_3)_2$

M 456.3
Obt. by dehydration of dihydrate at 90° over P_2O_5. Solid. Sl. dec. at 140°.

▷ Explosive dec. at 155-160°.

Dihydrate: [26522-91-8]. *Diaquabis(bromato-O)mercury*
Synth. from $Hg(NO_3)_2$ and $NaBrO_3$ in 3*M* HNO_3. Cryst. (H_2O). Spar. sol. H_2O (0.15g per 100 cm^3 cold). Mp 130-140° dec. Contains 8-coord. Hg in solid state with coordn. by $2H_2O$, 2 bidentate $BrO_3^\ominus$ and 2 monodentate $BrO_3^\ominus$. Isomorphous with Cd analogue.

Br_2Hg_4 IC-001827

Mercury(*I*) bromide (Hg_2Br_2)

Mercurous bromide

[15385-58-7]

Br—Hg—Hg—Br

M 560.9
Struct. comprises linear molecule (tetragonal) with 4 additional long Hg—Br contacts. Has application in accousto-optical devices. Light-sensitive white cryst. Pract. insol. H_2O (4×10^{-6} g per 100 cm^3 at 25°). Subl. 345° Dec. to $HgBr_2$ and Hg. Ferroelec. phase forms at 143 K. Exhibits orange fluorescence and becomes black under uv light. K_{sp} 6.40×10^{-23}

Monomer:
BrHg M 280.4
Has no separate existence.

Dibromoiodate(*I*)(1−)

[14791-49-2]

$[Br—I—Br]^\ominus$

M 286.7 (ion)
Linear struct., may or may not be symmetrical depending on counter cation. Forms red salts. Dissociates in H_2O.

K salt: [50967-92-5].
Br_2IK M 325.8
Synth. from KNO_3, I_2 and HBr. Solid + $1H_2O$. Dec. on exposure to atmosphere.

Cs salt: [18278-82-5].
Br_2CsI M 419.6
Synth. from stoichiometric amounts of bromide and iodide in a satd. soln. of CsBr. Dark orange cryst. Linear unsymmetrical. I—Br 262, 278 pm. Dec. on melting.

Me_4N salt: [15801-99-7].
Synth. from Me_4NI and Br_2 in EtOH. Dark orange cryst. (EtOH). Mp 192°.

Tetrapropylammonium salt: Synth. from Pr_4NI and Br_2 in EtOH. Dark orange cryst. (EtOH). Mp 139-140°.

$Br_2I_2P_2$ IC-001835

Hypodiphosphorous dibromide diiodide, 10Cl

P,P-Dibromo-P',P'-diiododiphosphine. 1,1-Dibromo-2,2-diiododiphosphine. 1,1-Dibromo-2,2-diiododiphosphorus(III). 1,1-Dibromo-2,2-diiododiphosphane

[79988-19-5]

Br_2PPI_2

M 475.5
Obt. only in mixt. with symmetrical isomer, Hypodiphosphorous dibromide diiodide, IC-001836. Synth. from P_2I_4 + PBr_3.

Dillon, K.B. *et al*, *Inorg. Nucl. Chem. Lett.*, 1981, **17**, 201 (*synth, P-31 nmr*)

$Br_2I_2P_2$ IC-001836

Hypodiphosphorous dibromide diiodide, 10Cl

P,P'-Dibromo-P,P'-diiododiphosphine. 1,2-Dibromo-1,2-diiododiphosphine. 1,2-Dibromo-1,2-diiododiphosphorus(III). 1,2-Dibromo-1,2-diiododiphosphane

[79988-21-9]

BrIPPIBr

M 475.5
Obt. only as mixt. with isomer Hypodiphosphorous dibromide diiodide, IC-001835. Synth. from P_2I_4 + PBr_3.

Dillon, K.B. *et al*, *Inorg. Nucl. Chem. Lett.*, 1981, **17**, 201 (*synth, P-31 nmr*)

Br_2I_2Sn IC-001837

Dibromodiiodostannane

Tin bromide chloride ($SnBr_2Cl_2$). Tin dibromide diiodide

[13550-40-8]

$SnBr_2I_2$ (C_{2v})

M 532.3

Synth. by mixing $SnBr_4$ and SnI_4 in 1:1 ratio. Orange-red hexagonal plates. Sol. cold H_2O; dec. in H_2O < 80°. d^{25} 3.631. Mp 50°. Bp 225°.

Cerf, C. et al, Bull. Soc. Chim. Fr., 1964, 389, 2818 (ir)

Br_2I_2Te IC-001838

Tellurium(*IV*) bromide iodide ($TeBr_2I_2$)

Tellurium dibromide diiodide. Dibromodiiodotellurium

$TeBr_2I_2$

M 541.2

Formed from $TeBr_2$ + I_2. Red solid, purple vapour. Mp 323°. Bp 420° dec.

Aynsley, E.E. et al, J. Chem. Soc., 1955, 2603 (synth)
Gmelin Handbook Inorg. Chem., Syst. No. 11, 1978, B3, 49 (rev)

$Br_2In^{\ominus}$ IC-001839

Dibromoindate(1−)

$[InBr_2]^{\ominus}$ (C_{2v})

M 274.6 (ion)

See also under Hexabromodiindate(2−), IC-002152.

Et_4N salt: [57650-22-3].

Synth. from C_2H_5In, HBr, and $[Et_4N]Br$ in C_6H_6/EtOH. Colourless moisture-sensitive cryst. Spar. sol. C_6H_6, Et_2O.

Habeeb, J.J. et al, J. Chem. Soc., Dalton Trans., 1976, 866 (synth, ir, raman)
Freeland, B.H. et al, Can. J. Chem., 1977, 55, 1527 (pe, esca)

Br_2Mg IC-001840

Magnesium bromide ($MgBr_2$), 8Cl

[7789-48-2]

$MgBr_2$

M 184.1

CdI_2 struct. Prepd. by reaction of magnesium metal with $[NH_4]Cl$ in liq. NH_3. White, hexagonal cryst., deliquescent. V. sol. H_2O (101.5 g per 100 cm^3 at 20°, 125.6 g per 100 cm^3 at 100°), sol. EtOH, MeOH. Mp 711°. ΔH_f° −524 kJ mol^{-1}; ΔG_f° −504 kJ mol^{-1}; S° 117 J K^{-1} mol^{-1}.

▷ Irritant.

Hexahydrate: [13446-53-2]. *Hexaaquamagnesium(2+) dibromide*

$Br_2H_{12}MgO_6$ M 292.2

Commercially available. Heat storage material used in conjunction with $CaCl_2.6H_2O$. Colourless, hygroscopic, monoclinic cryst.; dec. on heating with loss of H_2O and hydrol. V. sol. H_2O (316 g per 100 cm^3 H_2O at 0°); sol. Me_2CO, EtOH. Mp 172.4°. ΔH_f° −2410 kJ mol^{-1}; ΔG_f° −2056 kJ mol^{-1}; S° 397 J K^{-1} mol^{-1}.

Et_2O complex: [29858-07-9].

$C_4H_{10}Br_2MgO$ M 258.2

Commercially available reagent for conversion of aliphatic ethylene oxides and cyclohexene oxides to corresp. ketones. Mp > 300°.

▷ Flammable.

Br_2Mn IC-001841

Manganese(*II*) bromide ($MnBr_2$)

Manganese dibromide

[13446-03-2]

$MnBr_2$

M 214.7

CdI_2 layer struct. Synth. from $MnCO_3$ and aq. HBr followed by dehydration at 100° and drying in HBr gas at 725°. Alternatively obt. from $Mn(OAc)_2.4H_2O$ and AcBr in C_6H_6. Commercially available. Pink hygroscopic solid. V. sol. H_2O. Mp 698° (695°). Does not obey Curie or Curie-Weiss law at normal temps. T_N 2.16K. μ_{eff} = 5.82μ_B (298K). Forms adducts with donor molecules.

Br_2MoN IC-001842

Molybdenum(*V*) bromide nitride ($MoBr_2N$)

Molybdenum(V) nitridobromide ($MoNBr_2$)

[72142-91-7]

$MoBr_2N$

M 269.7

Incorrectly indexed in CA as MoBrN. Prepd. by thermolysis of $MoNBr_3$ *in vacuo* at 260°. Dark green hygroscopic powder. Stable below 420°. Ir indicates a Mo—N multiple bond.

Krueger, N. et al, Z. Naturforsch., B, 1979, 34, 1343 (synth, ir)

Br_2MoO_2 IC-001843

Molybdenum(*VI*) bromide oxide ($MoBr_2O_2$)

Molybdenum oxybromide (MoO_2Br_2).

Dibromodioxomolybdenum(VI)

[13595-98-7]

Br_2MoO_2

M 287.7

Prepd. by bromination of MoO_2 in the presence of activated charcoal or by reaction of $COBr_2$ with MoO_2. Red-brown flakes. Sol. H_2O.

Colton, R. et al, Aust. J. Chem., 1965, 18, 447 (synth)

Br_2NNb IC-001844

Niobium(*V*) bromide nitride ($NbBr_2N$), 10Cl

[62804-20-0]

$NbBr_2N$

M 266.7

Synth. by heating $NbBr_5$ + NH_4Br or $NbCl_5$ + NH_4Br to 210° then to 230° *in vacuo*. Dark-brick-red solid which slowly hydrol. in air.

Smirnova, S.M. et al, Russ. J. Inorg. Chem. (Engl. Transl.), 1977, 22, 402 (synth, ir, thermal anal)

Br_2NORu IC-001845

Dibromo(nitrosyl)ruthenium

$[Ru(NO)Br_2]_n$ ($n \geq 2$)

M 290.8

Struct. unknown; presumed polymeric. Prepd. by treating $[Ru(CO)_2Br_2]_n$ with NO at 230°. Dark brown solid.

Manchot, W. et al, Z. Anorg. Allg. Chem., 1933, 216, 99 (synth)

$Br_2N_2O_2W$ IC-001846

Dibromodinitrosyltungsten, 11Cl

[44518-81-2]

$[W(NO)_2Br_2]_n$

M 403.6

Polymeric zig-zag-chain struct. with bromine bridges. Synth. from BrNO and $W(CO)_6$ in CH_2Cl_2 or from BrNO and $W_2(CO)_8Br_2$. Good starting material for synth. of $W(NO)_2Br_2L_2$ where L = As, N or P donor. Dark green powder. Thermally stable, dec. > 100°. Stored under N_2. Sol. donor solvs. e.g. MeOH, MeCN, Me_2CO; insol. alkanes, C_6H_6, $CHCl_3$, CH_2Cl_2, CCl_4.

Br_2N_2OP IC-001847

Phosphorazidic dibromide, 10Cl

Azidodibromophosphine oxide.

Azidodibromooxophosphorus(V)

[69715-77-1]

$Br_2P(O)N_3$

M 248.8

Not purif. Synth. from $POBr_3$ + NaN_3/MeCN.

▷ Presumed explosive.

Dillon, K.B. et al, Inorg. Nucl. Chem. Lett., 1978, 14, 511 (synth, P-31 nmr)

Br_2N_3P IC-001848

Phosphorazidium dibromide, 10Cl

Azidodibromophosphine. Azidodibromophosphorus(III)

Phosphorus azide bromide ($P(N_3)Br_2$)

[69715-73-7]

$(N_3)PBr_2$

M 232.8

Not purif. Synth. from PBr_3 + NaN_3/MeCN. Dec. slowly in CH_2Cl_2.

▷ Presumed explosive.

Oxide: see *Phosphorazidic dibromide*, IC-001847.

Sulfide: see *Phosphorazidothioic dibromide*, IC-001849.

Br_2N_3PS IC-001849

Phosphorazidothioic dibromide, 10Cl

Azidodibromophosphine sulfide.

Azidodibromothiooxophosphorus(V)

[69715-75-9]

$Br_2PS(N_3)$

M 264.8

Not purif. Synth. from $PSBr_3$ + NaN_3/MeCN.

▷ Presumed explosive.

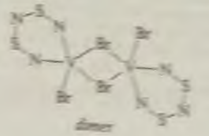
Dillon, K.B. et al, Inorg. Nucl. Chem. Lett., 1978, 14, 511 (synth, P-31 nmr)

$Br_2N_3S_2V$ IC-001850

[(Aminothio)sulfur diimidato(3−)-*N*,*N*′*]dibromovanadium(*V*), 11Cl

Cyclo-[(Disulfurtetraimide)dibromovanadium(V)]

[100286-36-0]



dimer

M 316.9

Dimeric.

Dimer:

$Br_4N_6S_4V_2$ M 633.8

Black solid. Mp 168° Subl$_{0.001}$ 130°.

Hanisch, J. et al, Z. Naturforsch., B, 1985, 40, 1457 (synth, cryst struct)
Roesky, H.W. et al, Z. Naturforsch., B, 1986, 41, 393 (synth, ir, V-51 nmr)

Br_2N_4Ti IC-001851

Diazidodibromotitanium(*IV*), 11Cl

Titanium azide bromide ($Ti(N_3)_2Br_2$)

[44800-45-5]

$TiBr_2(N_3)_2$

M 291.7

Synth. by adding IN_3 in CCl_4 to soln. of $TiBr_4$ in CCl_4. A similar reaction of $TiBr_4$ and Me_3SiN_3 in CH_2Cl_2 yields the product and a silyl polymer. Red-orange solid.

▷ V, explosive.

Br_2O_3W IC-001868

Tungsten(*VI*) bromide oxide (WBr_2O_2)
Tungsten dibromide dioxide
[13520-75-7]

WO_2Br_2

M 375.6
Synth. from Br_2-O_2 mixt. and W, or by bromination of WO_3 with Br_2 or CBr_4. Red cryst. Disproportionates to WO_3 and $WOBr_4$ at 200-300°.

Pascal, P., *Nouveau Traité de Chimie Minérale*, Masson, Paris, 1959, **XIV**, 822.

Br_2O_3 IC-001869

Bromine oxide (Br_2O_3)
Dibromine trioxide
[53809-75-9]

OBrOBrO or $BrOBrO_2$

M 207.8
Formed by thermolysis of Br_2O_4 at 10^{-2} mmHg. Unstable, not fully characterised.

Mellor Compr. Treat. Inorg. Theor. Chem., 1922, **2**, 285; *Suppl II, Part 1*, 1956, 747
Pascal, J.L., *Compt. Rend. Hebd. Seances Acad. Sci. Sect. C*, 1974, **279**, 43 (*synth, ir, raman*)

Br_2O_4 IC-001870

Bromine oxide (Br_2O_4)
Dibromine tetraoxide. Bromine dioxide dimer
[53723-86-7]

$O_2Br—BrO_2$

M 223.8
Dimer of the BrO_2 radical. Synth. from Br_2 + O_3 in freon at −50°. Orange-yellow solid, dec. at 0°.

Schmeisser, M. *et al*, *Angew. Chem.*, 1959, **71**, 523 (*synth*)
Buxton, G.V. *et al*, *Proc. R. Soc. London, A*, 1968, **304**, 427 (*kinetics of dec*)
Kirk-Othmer Encycl. Chem. Technol., 3rd Ed., Wiley, N.Y., 1978-1984, **4**, 247.

Br_2O_6Pb IC-001871

Lead(*II*) bromate(*V*) ($Pb(BrO_3)_2$)
[34018-28-5]

$Pb(BrO_3)_2$

M 463.0
Colourless monoclinic cryst. + $1H_2O$. Sl. sol. cold H_2O (1.38 g per 100 cm^3). Dec. at 180°; (165° *in vacuo*); dehydrates at 95°.
▷ Toxic; may be explosive when impure, esp. during synth.

Br_2O_6Zn IC-001872

Zinc bromate ($Zn(BrO_3)_2$)
[14519-07-4]

$Zn(BrO_3)_2$

M 321.1
Cryst. V. sol. H_2O.
Hexahydrate: [13517-27-6]. *Hexaaquazinc(2+) bromate*
Synth. from $Ba(BrO_3)_2$ and $ZnSO_4$. Cryst. (H_2O). Mp *ca.* 100°. Cubic. struct. comprises discrete $[Zn(OH_2)_6]^{2\oplus}$ and $BrO_3^{\ominus}$ ions. Dehydration occurs at 200°.

Br_2O_8U IC-001873

Uranyl bromate

$UO_2(BrO_3)_2$

M 525.8
Obt. as monohydrate.
Monohydrate:
$Br_2H_2O_9U$ M 543.8
Hygroscopic fluorescent green-yellow powder. Ir $\nu_{U=O}$ 937, 954 cm^{-1} (ν_{sym} 878 cm^{-1}). Dec. at 203°.

Rammelsberg, C., *Pogg. Ann.*, 1842, **55**, 69 (*synth*)
Wergel, F. *et al*, *J. Less-Common Met.*, 1983, **91**, 359 (*synth, ir, dta*)

$Br_2O_{11}Sb_2$ IC-001874

Antimony bromide oxide ($Sb_2Br_2O_{11}$), 8Cl
[12323-33-0]

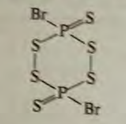
$Sb_2Br_2O_{11}$

M 1309.8
Synth. from $SbBr_3$ + Sb_2O_3. Monoclinic cryst.

Nurgaliev, B.Z. *et al*, *Zh. Neorg. Khim.*, 1981, **26**, 1043; *Russ. J. Inorg. Chem. (Engl. Transl.)*, 1981, **26**, 564 (*synth, cryst struct*)

$Br_2P_2S_6$ IC-001875

Phosphorus bromide sulfide ($P_2Br_2S_6$)
3,6-Dibromo-1,2,4,5,3,6-tetrathiadiphosphorinane 3,6-disulfide. Diphosphorus dibromide hexasulfide



M 414.1
Interatomic distances: P—Br 207, P—S 210, S—S 203, P=S 198 pm. Synth. from P_4S_7 + Br_2 in CS_2. Tetragonal large opaque yellow needles. Mp 118° dec.

Andrews, J.M. *et al*, *J. Inorg. Nucl. Chem.*, 1963, **25**, 829 (*synth, ir*)

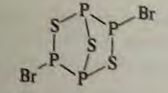
Mellor Compr. Treat. Inorg. Theor. Chem., Longman, London, 1971, **8/III**, 1168 (*rev*)

$Br_2P_4S_3$ IC-001876

Phosphorus bromide sulfide ($P_4Br_2S_3$)
3,6-Dibromo-2,5,7-trithia-1,3,4,6-tetraphosphabicyclo[2.2.1]heptane, 9Cl
[58878-07-2]



M 379.9
Synth. from corresp. diiodide + AgBr. Solid. Mp 55-58°.

Fluck, E. *et al*, *Z. Anorg. Allg. Chem.*, 1976, **420**, 247 (*synth, P-31 nmr*)
Tattershall, B.W., *J. Chem. Soc., Dalton Trans.*, 1987, 1515 (*P-31 nmr*)

Br_2Pb IC-001877

Lead(*II*) bromide ($PbBr_2$), 9Cl
Lead dibromide
[10031-22-8]

$PbBr_2$

M 367.0
$PbCl_2$ type struct. Synth. from PbO or $PbCO_3$ + HBr. Can also be formed directly from Pb + Br_2. Used as a photopolym. catalyst, a welding flux, in photoduplication processes, and in ir-transmitting glasses. White cryst. Sol. H_2O. Insol. EtOH. Mp 373°, Bp 916°.
▷ Toxic.
[30913-92-9]

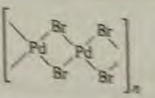
Br_2Pd IC-001878

Palladium(*II*) bromide ($PdBr_2$), 8Cl
Palladium dibromide
[13444-94-5]



M 266.2
Polymeric struct. (α-$PdCl_2$ type) with square planar Pd. Synth. from Palladium, IC-021791 + Br_2. Commercially available. Red-black solid. Sol. HBr (aq.); insol. H_2O.

Wells, A.F., *Structural Inorg. Chem.*, 5th Ed., Oxford, 414 (*struct*)

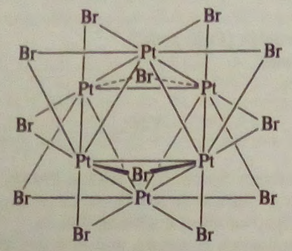
Br_2Pt IC-001880

Platinum(*II*) bromide ($PtBr_2$), 9CI

Dodeca-μ-bromohexaplatinum(II). *Platinum dibromide*

[13455-12-4]



M 354.8

Struct. comprises Pt_6Br_{12} units. Synth. from H_2PtBr_4 or H_2PtBr_6 heated. Starting material for other $Pt^{(II)}$ Br compds. Commercially available. Brown solid. Sol. $Br^{\ominus}$ aq. Dec. at 230°.

Sidgwick, N.V., *The Chemical Elements and their Compds.*, Oxford, 1950, 1582.

Wells, A.F., *Structural Inorg. Chem.*, 5th Ed., Oxford, 1984, 414 (*struct*)

Br_2Rh IC-001881

Rhodium bromide ($RhBr_2$), 8CI

Rhodium dibromide

[19166-82-6]

$RhBr_2$

M 262.7

The gaseous molecule is said to have an angular struct. No recent studies; may not be genuine. Sol. H_2O.

Dwyer, F.P. *et al*, *J. Proc. R. Soc. N.S.W.*, 1941, **75**, 421 (*synth, props*)

Charkin, O.P. *et al*, *J. Struct. Chem. USSR* (*Engl. Transl.*), 1965, **6**, 550 (*struct*)

Br_2S IC-001882

Sulfur(*II*) bromide (SBr_2)

Sulfur dibromide. Dibromosulfane. Sulfurous bromide

[14312-20-0]

SBr_2

M 191.8

Formed by heating $[SBr_3]^{\oplus}[AsF_6]^{\ominus}$. Unstable compd., not fully characterised.

Gmelin Handbook Inorg. Chem., Syst. No. 9, 1978, **B2**, 293 (*bibl*)

Minkowitz, R. *et al*, *Z. Naturforsch., B*, 1986, **41**, 784 (*ms*)

Br_2SSi IC-001883

Dibromothioxosilane

Silicon dibromide sulfide

[13520-74-6]

$SSiBr_2$

M 219.9

Colourless plates. Sol. CS_2, C_6H_6; dec. in H_2O. Mp 93°. $Bp_{18.3}$ 150°.

Kirilenko, V.V. *et al*, *Fiz. Khim. Steckla*, 1975, **1**, 230 (*synth*)

Br_2SW IC-001884

Tungsten(*IV*) bromide sulfide (WBr_2S), 9CI

[54760-65-5]

$WSBr_2$

M 375.7

Struct. not detd. Synth. from Sb_2S_3 and WBr_5 at 140°. Brown solid.

Britnell, D. *et al*, *J. Chem. Soc., Dalton Trans.*, 1974, 2191 (*synth*)

Br_2S_2 IC-001885

Sulfur bromide (S_2Br_2), 11CI, 10CI, 9CI

Disulfur dibromide. Dibromodisulfane

[13172-31-1]

BrS—SBr

M 223.9

Interatomic distances: S—S 198, S—Br 224 pm; angle: BrSS 105°. Synth. by reaction of S + Br_2 or S_2Cl_2 + HBr. Red solid or dark red liq., dissociates on heating. Hydrol. to HBr + SO_2 + S. Sol. CCl_4, C_6H_6, CS_2. Mp −46°. With HBr gives sulfur chains S_xBr_2.

▷ Violent reaction with K, Na, Al and Sb, also with Fe at 650°. When moist, reacts violently with oxidants.

Hirota, E., *Bull. Chem. Soc. Jpn.*, 1958, **31**, 130 (*struct*)

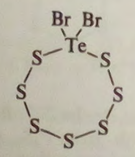
Br_2S_7Te IC-001886

8,8-Dibromocycloheptathiatellurium

8,8-Dibromo-8,8-dihydroheptathiatellurocane, 10CI

[39943-94-7]



M 511.8

Formed from $TeBr_4$ + H_2S_n. Brown air-sensitive cryst.

Weiss, J. *et al*, *Acta Crystallogr., Sect. B*, 1972, **28**, 3653 (*synth, cryst struct*)

Br_2Se IC-001887

Selenium(*II*) bromide ($SeBr_2$)

Selenium dibromide. Dibromoselane

[22987-45-7]

$SeBr_2$

M 238.7

Not isol. but present in the vapour of Se_2Br_2 and $SeBr_4$. Interatomic distance: Br—Se 232 pm; angle: 100°.

Gmelin Handbook Inorg. Chem., Syst. No. 10, 1949, 149; 1984, **B2**, 234 (*complexes*)

Br_2SeW IC-001888

Tungsten(*IV*) bromide selenide (WBr_2Se)

[54760-66-6]

$WSeBr_2$

M 422.6

Synth. by disproportionation of $WSeBr_3$ at 220°.

Britnell, D. *et al*, *J. Chem. Soc., Dalton Trans.*, 1974, 2191 (*synth*)

Br_2Se_2 IC-001889

Selenium bromide (Se_2Br_2), 11CI, 10CI, 9CI

Diselenium dibromide. Dibromodiselane. Selenous bromide

[7789-52-8]

BrSe—SeBr

M 317.7

Exists in 2 cryst. forms as solid. Ionises in solvs. such as MeCN. Synth. from Se + Br_2 in CS_2. Commercially available. Dark-red oily liq. Dec. slowly by H_2O to SeO_2 + Se + HBr. Readily disproportionates to Se + $SeBr_4$. Sol. disulfuric acid, CCl_4, CS_2. d^{15} 3.604. Bp 225-230° dec.

α-form

Interatomic distances: Se—Se 194.8, Br—Se 223.7 pm; angle: BrSeSe 109.2°. Mp 5°.

β-form

Interatomic distances: Se—Se 224.1, Br—Se 236.6 pm; angle: BrSeSe 103.9°. Brown-black solid. Mp 5°.

Br_2Sr IC-001892

Strontium bromide ($SrBr_2$), 8CI

[10476-81-0]

$SrBr_2$

M 247.4

Struct. type $SrBr_2$ characterised by 7- and 8-coord. Sr atoms and trigonally and tetrahedrally coord. Br atoms. May be considered a hybrid of $SrCl_2$ and SrI_2 struct. Synth. in high purity from Sr + $[NH_4]Br$ in liq. NH_3. Cryst. from aq. soln. yields the hexahydrate which is fully dehyd. at 180°. Hygroscopic white tetragonal cryst. V. sol. H_2O (100 g per 100 cm^3 at 20°; 223 g per 100 cm^3 at 100°); sol. EtOH. Mp 657°. ΔH_f° −718 kJ mol^{-1}; ΔG_f° −699 kJ mol^{-1}; S° 143 J K^{-1} mol^{-1}.

▷ WK8050000.

Monohydrate: [33429-50-4].

Br_2H_2OSr M 265.4

Formed during thermal dec. of hexahydrate.

Hexahydrate: [7789-53-9].

$Br_2H_{12}O_6Sr$ M 355.5

Colourless hexagonal cryst., dec. on heating with H_2O loss (−5 H_2O at 89°; −6H_2O at 180°). V. sol. H_2O (204 g per 100 cm^3 at 0°). ΔH_f° −2531 kJ mol^{-1}; ΔG_f° −2175 kJ mol^{-1}; S° 406 J K^{-1} mol^{-1}.

▷ WK8225000.

Br_2Ta IC-001893

Tantalum(*II*) bromide ($TaBr_2$), 11CI

Tantalum dibromide

[13569-48-7]

$TaBr_2$

M 340.7

Struct unknown; possibly exists as Ta_6Br_{12}. Synth. by H_2 reduction of $TaBr_5$ at 245-280°. Reduction with Ta only gives a mixture of $TaCl_3$ and $TaCl_2$. Pale blue solid.

IC-001895

Br_2Ti

Titanium bromide ($TiBr_2$)
Titanium dibromide
[13783-04-5]

$TiBr_2$

M 207.6
CdI_2 struct. Synth. by disproportionation of $TiBr_3$ at ~350° or from $TiBr_4$ and Ti in a sealed tube at 800°. A v. reactive form results from thermol. of Me_2TiBr_2 in Et_2O. Black solid. Disproportionates to Ti and $TiBr_4$ above 400°. Mp > 500° dec. Paramagnetic. μ_{eff} = $1.29\mu_B$ (288K), $0.78\mu_B$ (90K).

IC-001896

Br_2Tm

Thulium bromide ($TmBr_2$)
Thulium dibromide
[64171-87-7]

$TmBr_2$

M 328.7
Has EuI_2 struct. Other polymorphs obt. at high temps. Dark green solid.

Korenistova, A.N., Zh. Neorg. Khim., 1977, **22**, 2130; 1979, **24**, 1139; *Russ. J. Inorg. Chem. (Engl. Transl.)*, 1977, **22**, 1152; 1979, **24**, 633 (*sol-vol*)

IC-001897

Br_2V

Vanadium bromide (VBr_2), 11Cl
Vanadium dibromide
[14896-41-6]

VBr_2

M 210.7
Hexagonal CdI_2 struct. Synth. from VBr_3 + H_2 at 450° in a flow system. Light brown-red solid, thermally stable to at least 900°. Paramagnetic. μ_{eff} = $2.86\mu_B$ (293K), $1.45\mu_B$ (90K). ΔH_f° −347 kJ mol^{-1}.

IC-001898

Br_2Y_3

Yttrium bromide (Y_2Br_3)
Yttrium sesquibromide
[73728-20-8]

Y_2Br_3

M 426.5
Has Gd_2Cl_3 struct. in which metal octahedra share edges forming infinite chains. Synth. in low yield by heating YBr_3 and excess Y at 907°, cryst. at 747°. Fine needles.

Mattausch, H. *et al*, *Inorg. Chem.*, 1980, **19**, 2128 (*synth, cryst struct*)

IC-001899

Br_2Yb

Ytterbium bromide ($YbBr_2$)
Ytterbium dibromide
[25502-05-0]

$YbBr_2$

M 332.8
Exhibits several cryst. forms including SrI_2 and $CaCl_2$ structs. Can be synth. from Yb + 1,2-dibromoethane. Yellow or grey green solid. Sl. sol. THF; sol. H_2O. Mp 677° (673°). Bp 1800°. Dec. by H_2O. Exhibits red fluorescence in uv light.

IC-001900

Br_2Zn

Zinc bromide ($ZnBr_2$)
[7699-45-8]

$ZnBr_2$

M 225.1
Tetragonal in solid state: Br in fcc array with Zn in ¼ of tetrahedral holes; isotypic with ZnI_2. Linear in gas phase. V. hygroscopic colourless cryst.; anhydrous (H_2O, > 37°), dihydrate (H_2O < 35°). Sol. H_2O (388 g per 100 cm^3). Mp 394°. Bp 650°.

Br_2Zr

Zirconium bromide ($ZrBr_2$), 11Cl
Zirconium dibromide
[24621-17-8]

$ZrBr_2$

M 251.0
Isostructural with $ZrCl_2$. Synth. by disproportionation of $ZrBr_3$ between 320° and 500°. Used as an absorber in artificial kidneys, (see also Zirconium bromide ($ZrBr_3$), IC-002003 and Zirconium bromide ($ZrBr_4$), IC-002090) and as anode in H_2/O_2 fuel cells. Blue-black solid which disproportionates to Zr + $ZrBr_4$ above 400°. ΔH_f −410kJ mol^{-1}.

$Br_3^{\ominus}$

Tribromide(1 −)
[14522-80-6]

$[Br—Br—Br]^{\ominus}$

M 239.7 (ion)
Linear, may or may not be symmetrical depending on counter cation. Used on polymer support as brominating agent. Forms red salts. Dissociates in H_2O. Linear symmetrical in $Me_3NH^{\oplus}$ salt. Br—Br 253 pm.
Cs salt: Synth. from conc. aq. CsBr and Br_2. Unsymmetrical anion, isostructural with CsI_3.
Tetrabromiphosphonium salt:
Br_9P M 590.3
Synth. from Cs_3, PBr_3 and Br_2. V. hygroscopic flat red needles. Loses bromine readily unless kept in soln. or sealed glass tube. Unsymmetrical anion: Br—Br 290, 230, angle BrBrBr 177.3°.
Me_4N salt: [15625-56-6].
Synth. from Me_4NBr and Br_2 in HOAc. Red-orange cryst. Mp 118-118.5°. Symmetrical anion: Br—Br 253 pm.
Et_4N salt: [6726-55-3].
Tetrabutylammonium salt: [38932-80-8].
Synth. from Bu_4NBr and Br_2. Light orange cryst. Mp 71-73°.
Benzyltrimethylammonium salt: [111865-47-5].
Brominating agent for org. compds.

Aldrich Chem. Co. Inc., Aldrich Catalog Handbook of Fine Chemicals, 1997, 167.

$Br_3^{\ominus}$

Tribromine(1 +)
[33105-86-1]

$[Br—Br—Br]^{\oplus}$

M 239.7 (ion)
Bent cation. Used as a brominating agent. Red cation. Dissociates in H_2O.
Hexafluoroarsenate: [12429-01-5].
$AsBr_3F_6$ M 428.6
Synth. from O_2AsF_3 and Br_2 or from Br_2, BrF_3 and AsF_3. Chocolate brown solid at r.t., carmine red at −195°. Subl. 30-50°. Dec. under N_2 at 70°.
Fluorosulfate: [58722-89-7].
Br_3FO_3S M 338.7
Synth. from Br_2 and $BrOSO_2F$ at low temp. Ir ν_{as} 288 cm^{-1}.
Tetrakis(fluorosulfato-O)aurate(1 −): [72030-47-0].
$AuBr_3F_4O_{12}S_4$ M 852.9
Synth. from Au and $BrSO_3F$. Dark brown hygroscopic polycryst. Dec. at 105°.
Bis(tetrafluorosulfato-O)platinate(2 −) (2:1): [90846-22-3].
$Br_6F_8O_{16}PtS_4$ M 1268.8
Synth. from Pt, excess $BrSO_3F$ and Br_2. Hygroscopic dark brown solid. Dec. on standing in air, dec. under N_2 at 90°.

Br_3Cf
Californium(*III*) bromide ($CfBr_3$)
Californium tribromide
[20758-68-3]

$CfBr_3$

M 491.7
Dimorphic. Synth. from Cf_2O_3/HBr at 675°. Green solid (dark amber at Mp.). Subl. 785°. Appears to dissociate reversibly to $CfBr_2$ + Br_2 at 675°.
Low temp.-form
Approximates to BiI_3 struct.
High temp.-form
Approximates to high-$CrCl_3$ struct. Stable >500°. Under pressure, transforms to $PuBr_3$ type struct.

$Br_3Cr^{\ominus}$
Tribromochromate(*II*)(1−), 11Cl, 10Cl, 9Cl
[21910-39-4]

$[CrBr_3]_n^{n\ominus}$ chains

M 291.7 (ion)
Struct. analogous to Trichlorochromate(*II*)(1−), IC-016810. Salts obt. from melt or HOAc.
Antiferromagnetic.
K salt:
Br_3CrK M 330.8
Rb salt: [67303-59-9]. *Rubidium tribromochromate(II)* (*$RbCrBr_3$*)
Br_3CrRb M 377.1
Cs salt: [29794-91-0]. *Caesium tribromochromate(II)* (*$RbCrBr_3$*). *Caesium chromium bromide ($CsCrBr_3$)*
Br_3CrCs M 424.8
Brown, oxidises slowly in air.
Me_4N salt: [29794-92-1].
Yellow needles (HOAc). Antiferromagnetic.

IC-001916

Br_3Cr
Chromium(*III*) bromide ($CrBr_3$)
Chromium tribromide. Chromic bromide
[10031-25-1]

$CrBr_3$

M 291.7
BiI_3-type layer struct. Interatomic distance Cr—Br 257 pm. Can be synth. electrochemically using Cr anode and liq. Br_2. Dark green cryst. Easily oxidised in air; easily reduced by H_2. Insol. cold H_2O; sol. C_5H_5N. Mp 812° (1130° est.). μ_{eff} = 3.94μ_B (θ −51, 298K). Ferromagnetic. Begins to dissoc. at 700°.
Chromium(III) bromide hexahydrate [13478-06-3]
$Br_3CrH_{12}O_6$ M 399.7
Violet form: Hexaaquachromium(3+) tribromide
Blue-grey-violet cryst. V. sol. H_2O; insol. EtOH.
Green form: [82676-67-3]. *Tetraaquadibromochromium(1+) bromide dihydrate*
Synth. from CrO_3 and excess 50% HBr. Green deliquescent cryst.; stable in solid state. Sol. H_2O, EtOH; insol. Et_2O. On warming in soln., converts to violet form.

IC-001917

Br_3CsPb
Caesium lead bromide ($CsPbBr_3$)
Caesium tribromoplumbate(II)
[15243-48-8]

$CsPbBr_3$

M 579.8
Perovskite struct. Synth. from $PbBr_2$ and CsBr. Pale orange prisms or needles. Phase transitions occur at 88° and 130°.

Wells, H.L., *Z. Anorg. Allg. Chem.*, 1893, **3**, 195 (*synth*)

$Br_3Cu^{\ominus}$ IC-001919

Tribromocuprate(*II*)(1−)

[31415-59-5]

$[CuBr_3]^{\ominus}$

M 303.2 (ion)

Anion may be variously associated into eg. infinite $CuBr_4$ chains or dimers depending on counter-cation.

Cs salt: [16594-89-1]. *Caesium tribromocuprate*(II)
Br_3CsCu M 436.1

Isopropylammonium salt: Cryst. (EtOH). Three phase known: r.t. phase (III) contains chains of $[Cu_2Br_6]^{2\ominus}$ dimers; phase (II) contains $[CuBr_3]^{\ominus}$ and highest temp. phase (I) contains monobridged $[CuBr_4]^{2\ominus}$ tetrahedra.

Ph_4P salt: [88005-81-6].

Br_3Dy IC-001920

Dysprosium(*III*) bromide ($DyBr_3$)

Dysprosium tribromide

[14456-48-5]

$DyBr_3$

M 402.2

White solid. Sol. H_2O. Mp 881° (879°). Bp 1480°.

Hexahydrate: [14890-43-8].
Hexaaquadibromodysprosium(1+) bromide
$Br_3DyH_{12}O_6$ M 510.3
White cryst. Sol. H_2O. Loses H_2O on controlled heating *in vacuo*. Formulated as $[DyBr_2(OH_2)_6]^{\oplus}Br^{\ominus}$.

Br_3Eu IC-001923

Europium(*III*) bromide ($EuBr_3$)

Europium tribromide

[13759-88-1]

$EuBr_3$

M 391.6

Has $PuBr_3$ struct. Light grey solid. Sol. H_2O. Mp 702°. Tends to dec. to $EuBr_2$ on heating.

Hexahydrate: [16021-75-3].
$Br_3EuH_{12}O_6$ M 499.7
Colourless monoclinic cryst. Sol. H_2O. Loses H_2O on controlled heating with formn. of EuOBr and some reduction to $Eu^{2\oplus}$.

Br_3Fe IC-001928

Iron(*III*) bromide ($FeBr_3$)

Ferric bromide

[10031-26-2]

$FeBr_3$

M 295.5

Near octahedral in solid state. Similar struct. to $FeCl_3$. Fe_2Br_6 dimer in gas phase. Synth. from $FeBr_2$ + Br_2 at elevated temp. or from Fe + Br_2. Forms adducts with a wide range of ligands. Lewis acid catalyst similar to Iron(*III*) chloride ($FeCl_3$), IC-016843. Bromination catalyst, e.g. in Friedel Crafts reactions. Red-brown cryst. Deliquescent. Dec. to iron(*II*) with ease at >120°. Sol. H_2O, EtOH, Et_2O, AcOH. Subl. with dec. on heating.

Hexahydrate: Ferric bromide hexahydrate
Obt. by recryst. of $FeBr_3$ from H_2O <49°. Dark green cryst. V. sol. H_2O, EtOH, Et_2O. Mp 27°.

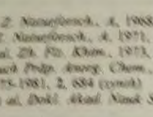
Dinitrosyltribromomolybdate(1−) monohydrate



M 413.6 (ion)
Approx. *mer*-octahedral anion.
Ph_4P salt: [85361-41-7].
Synth. from $MoBr_4$ + Br_3CNO + $[Ph_4P]Br$. Light green cryst. (CH_2Br_2). Sol. CH_2Br_2.
Schumacher, C. *et al.*, *Z. Anorg. Allg. Chem.*, 1982, **495**, 133 (cryst struct, synth, ir)

$Br_3H_2OZn^{\ominus}$ IC-001834
Aquatribromozincate(1−)
[18921-14-7]

$[ZnBr_3(OH_2)]^{\ominus}$

M 323.1 (ion)
X salt, monohydrate: [31371-00-3]. *Potassium zinc tribromide dihydrate*
Cryst. Mp 75°. Dimorphic: α-form, obtained from KBr and $ZnBr_2$ (1.75:1) in H_2O; β-form, obtained from KBr and $ZnBr_2$ (1:1) in H_2O.
[15279-57-9]

Br_3H_2NZr IC-001835
Aminetribromodizirconium(III), 11Cl
Zirconium(III) bromide amine
[97459-08-0]

$(H_2N)Zr_2Br_3$

M 347.9
Synth. by heating $ZrBr_3.6NH_3$ to 100°. Dark grey solid. Paramagnetic. μ_{eff} = 0.85μ_B.
Boyle, E. *et al.*, *Inorg. Chim. Acta*, 1985, **100**, 281 (synth, magnetism, ir)

$Br_3H_2MnO_3^{\ominus}$ IC-001836
Diaquatribromomanganate(II)(1−)

$[MnBr_3(OH_2)_2]^{\ominus}$

M 330.6 (ion)
Synth. from 1:1 mixt. of aq. $MnBr_2$ and either CsBr or Me_3NHBr.
Cs salt: [59700-00-7]. *Caesium tribromomanganate(III) dihydrate*
$Br_3CsH_4MnO_2$ M 463.5
Struct. contains corner sharing chains of *cis*-$MnBr_4(H_2O)_2$ as in $CsNiCl_3.2H_2O$.

$Br_3H_2NO_3Ru$ IC-001837
Diaquatribromo(nitrosyl)ruthenium

$Ru(NO)Br_3(OH_2)_2$

M 408.8
Struct. presumably *pseudo*-octahedral; isomeric form unknown. Prepd. by dissolving RuO_4 in an aq. HBr:HNO_3 mixt. Potentially v. valuable synth. reagent for complexes containing the $Ru(NO)Br_3$ moiety (cf. Diaquatrichloro(nitrosyl)ruthenium, IC-016865).
Joly, A., *Compt. Rend. Hebd. Seances Acad. Sci.*, 1959, **108**, 854 (synth)

$Br_3H_9N_3Ru$ IC-001838
Triamminetribromoruthenium(III), 9CI
Ruthenium(III) bromide triammine
[50216-73-8]

$Ru(NH_3)_3Br_3$

M 391.9
Only the *fac*-isomer known. Prepd. by aerial oxidation of $[Ru_2(NH_3)_6Br_6]Br_2$ or boiling *cis*-$[Ru(NH_3)_4Br_2]Br$ in conc. HBr. Sol. HBr. Thermal dec. → $2RuBr_3$ + 3NH$_3$ + $2NH_4Br$ + N_2 + H_2. D t_{max} 220, 310 (dta)

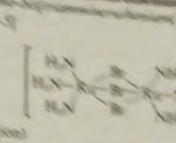
$Br_3H_{18}N_9Ru_2^{3\oplus}$ IC-001839
Hexaammine-tri-μ-bromodiruthenium(2+), 9CI
Tris-μ-bromo-bis[pentaamineruthenium(III)]
[58320-17-5]



M 544.0 (ion)
Originally incorrectly formulated as $[Ru_2(NH_3)_6Br_3(OH)_3]$ (μ-Br)Br. Sol. H_2O.
Tribromide
$Br_3H_{18}N_9Ru_2$ M 703.8
Prepd. by treating Hexaammineruthenium(2+), IC-020000 with conc. HBr. Blue-green cryst. μ_{eff} = 2.80 μ_B per dimeric unit.
Bottomley, F. *et al.*, *Can. J. Chem.*, 1971, **49**, 3778 (synth, reactions, magnetism)

Br_3Hf IC-001840
Hafnium(III) bromide ($HfBr_3$), 11Cl
Hafnium tribromide
[13782-98-2]

$HfBr_3$

M 418.2
Struct. unknown. Synth. from $HfBr_4$ and Al at 430° and 80 atm. or from $HfBr_4$ and Hf at 460-530°and 40 atm. Blue-black solid which disproportionates above 330° to $HfBr_2$ and $HfBr_4$.

Marek, G.S. *et al.*, *Russ. J. Inorg. Chem. (Engl. Transl.)*, 1979, **24**, 1303 (synth)

$Br_3Hg_2O_3$ IC-001841
Mercury bromide oxide ($Hg_2Br_3O_3$)
[11129-20-5.5]

$Hg_2Br_3O_3$

M 1008.4

Mixed Hg(*I*)/Hg(*II*) compd. Struct. contains interlinked 12 membered rings of (Hg—Hg—O)$_4$ with $Br^\ominus$ in cavities. Synth. from Hg_2Br_2 and yellow HgO. Dark red-brown cryst.

Stalhandske, C., *Acta Chem. Scand., Ser. A*, 1987, **41**, 576 (*synth, cryst struct*)

IC-001942

Br_3Ho
Holmium(*III*) bromide ($HoBr_3$)
Holmium tribromide
[13825-76-8]

$HoBr_3$

M 404.6
Has YCl_3 struct. changing to $PuBr_3$ struct. under pressure. Yellow solid. Sol. H_2O, THF. Mp 914°. ~ 1470°°.
Hexahydrate: [15162-88-6]. *Hexaaquadibromoholmium(1+) bromide*
$Br_3H_{12}HoO_6$ M 512.7
Pale yellow cryst. Sol. H_2O. Loses H_2O on controlled heating *in vacuo*. Formulated as $[Ho(OH_2)_6Br_2]^\oplus Br$.

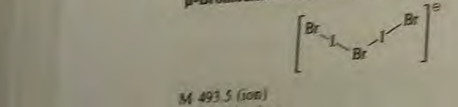
IC-001943

$Br_3I_2^\ominus$
μ-Bromodibromodiiodate(1−)



M 493.5 (ion)
V-shaped anion.
2,2'-Bipyridinium salt: [95547-80-1].
Synth. from 2,2'-bipyridinium bromide and BrI. Orange yellow solid.

Parlow, A. *et al, Z. Naturforsch., B*, 1985, **40**, 45 (*synth*)

IC-001944

$Br_3In^{2\ominus}$
Tribromoindate(*I*)(2−)
[38387-08-5]

$[InBr_3]^{2\ominus}$ (C_{3v})

M 354.5 (ion)
Synth. from $Me_2bipyBr_2$ and InBr in MeOH. Ir ν_{In-Br} 177, 149, 74, 46 cm^{-1}.
N,N'-Dimethyl-4,4'-bipyridinium(2+) salt: [35163-54-3].
Pale yellow solid (MeOH). Becomes blue on standing.

IC-001946

Br_3Ir
Iridium(*III*) bromide ($IrBr_3$), 8Cl
Iridium tribromide
[10049-24-8]

$IrBr_3$

M 431.9
insol.-form
Has $CrCl_3$ type struct. Mustard grey solid. Insol. alcohols, H_2O, acids.
sol.-form
Formed when $IrO_2.nH_2O$ is repeatedly evaporated to dryness with HBr. Sol. alcohols.

Angoletta, M. *et al, Gazz. Chim. Ital.*, 1962, **92**, 811 (*synth*)

IC-001947

Br_3La
Lanthanum(*III*) bromide ($LaBr_3$)
Lanthanum tribromide
[13536-79-3]

$LaBr_3$

M 378.6
Has the UCl_3 struct. in solid state, pyramidal in gas phase. White solid. Sol. H_2O, Py, DMF; sl. sol. THF, MeCN. Mp 783°.
Heptahydrate: [13465-19-5].
$Br_3H_{14}LaO_7$ M 504.7
Colourless cryst. Sol. H_2O, EtOH. Prob. isostructural with corresp. chloride.

$Br_3Mn^\ominus$ IC-001949
Tribromomanganate(*II*)(1−)
$[MnBr_3]^\ominus$

M 294.6 (ion)
K salt: Potassium tribromomanganate(III) (*$KMnBr_3$*). *Manganese*(III) *potassium bromide* (*$MnKBr_3$*)
Br_3KMn M 333.7
Synth. by heating a 1:1 mixt. of KBr and $MnBr_2$. Hygroscopic cryst. μ_{eff} = 5.67μ_B(293K). Struct. contains double chain -edge sharing $MnBr_6$ octahedra of NH_4CdCl_3 type.
Rb salt: [38669-02-2]. *Rubidium tribromomanganate*(II) (*$RbMnBr_3$*). *Manganese*(II) *rubidium bromide* (*$MnRbBr_3$*)
Br_3MnRb M 380.1
Synth. from $MnCO_3$ and aq. HBr and heating the product in an atm. of dry HBr gas. Mp 452°. Antiferromagnetic at low temps. Struct. contains face sharing $MnBr_6$ chains of $CsNiCl_3$ type.
Cs salt: [36482-50-5]. *Caesium tribromomanganate*(II) (*$CsMnBr_3$*). *Caesium manganese*(II) *bromide* (*$CsMnBr_3$*)
Br_3CsMn M 427.5
Synth. from Cs_2CO_3 and $MnCO_3$ and aq. HBr and heating the product in thepresence of dry HBr gas. Hygroscopic cryst. Mp 554° (565°). μ_{eff} = 4.90μ_B (293K). Antiferromagnetic at low temp.. Struct. contains facesharing $MnBr_6$ chains of $CsNiCl_3$ type.
Me_3NH salt: Synth. by heating a 1:1 mixt. of $[Me_3NH]Br$ and $MnBr_2$. Pink needles.
Me_4N salt: [51139-56-1].
Synth. by heating 1:1 mixt. of $[Me_4N]Br$ and $MnBr_2$. Pink needles. Struct. contains face sharing $MnBr_6$ chains of $CsNiCl_3$ type.
Et_4N salt: [51139-57-2].
Synth. by heating 1:1 mixt. of $[Et_4N]Br$ and $MnBr_2$.

Br_3Mo IC-001950
Molybdenum bromide ($MoBr_3$), 9Cl
Molybdenum tribromide. Molybdic bromide
[13446-57-6]

$MoBr_3$

M 335.6
Prepd. by heating Mo in a stream of Br_2 at 350°. Dark green or black needles. Deliquescent. Insol. H_2O, EtOH.

Inorg. Synth., 1967, **10**, 40 (*synth*)
Boyd, P.D.W. *et al, Aust. J. Chem.*, 1969, **22**, 2595 (*str*)
Druce, P.M. *et al, J. Chem. Soc. A*, 1971, 3595 (*synth, anhyd*)
Babel, D., *J. Solid State Chem.*, 1972, **4**, 403 (*cryst struct*)
Oppermann, H., *Z. Anorg. Allg. Chem.*, 1973, **395**, 249 (*thermodyn*)

Br_3MoN IC-001951
Molybdenum(*VI*) bromide nitride ($MoBr_3N$), 9Cl
[68926-06-2]

$MoBr_3N$

M 349.6
Prepd. from $MoBr_4$ + IN_3 in CCl_4 suspension. V. hygroscopic brown powder. Ir spectrum agrees with an Mo—N triple bond.

Dehnicke, K. *et al, Z. Naturforsch., B*, 1978, **33**, 1242 (*synth, ir*)

Br_3MoN_3 IC-001952
Molybdenum(*IV*) azide bromide ($Mo(N_3)Br_3$), 9Cl
Molybdenum(IV) *bromide nitride* (*$MoBr_3N_3$*)
[68825-98-9]

$Mo(N_3)Br_3$

M 377.6
Prepd. from $MoBr_4$ + IN_3. Dark brown, hygroscopic powder.
▷ Explosive in the dry state.

Dehnicke, K. *et al, Z. Naturforsch., B*, 1978, **33**, 1242 (*synth, ir*)

Br_3MoO IC-001953
Molybdenum(*V*) bromide oxide ($MoBr_3O$), 9Cl
Molybdenum(V) *oxytribromide*
[13596-04-8]

$MoOBr_3$

M 351.6
Prepd. from MoO_2Br_2 + PBr_5 or from 'moist' $MoBr_3$ + Br_2 under reflux. Grey-black solid. Insol. H_2O.

Colton, R. *et al, Aust. J. Chem.*, 1965, **18**, 447 (*synth*)
Crouch, P.C. *et al, J. Chem. Soc. A*, 1968, 1061 (*synth, ir*)
Drew, M.G.B. *et al, Acta Crystallogr., Sect. B*, 1970, **26**, 1161 (*cryst struct*)

Br_3N IC-001954

Nitrogen tribromide

Tribromoamine. Nitrogen bromide (NBr_3)

[15162-90-0]

NBr_3

M 253.7

Synth. from Br_2 + NH_3 at −70°. Fairly stable in dil. aq. solns. if excess Br_2 is present. Sol. H_2O. v. sol. $CHCl_3$. λ_{max} 260 nm.

▷ Explosive even at −100°.

Jander, J. *et al*, *Z. Anorg. Allg. Chem.*, 1966, **349**, 57 (*synth*)
Jander, J., *Adv. Inorg. Chem. Radiochem.*, 1976, **19**, 2 (*rev*)

Br_3NW IC-001955

Tungsten(*V*) bromide nitride (WBr_3N)

[76537-91-2]

$N{\equiv}WBr_3$

M 437.5

The *ir* spectrum indicates the presence of a W≡N triple bond. Synth. from IN_3 + WBr_5 or WBr_6 + $[Hg_2N]Br$ in CH_2Cl_2 at 80°. Moisture-sensitive black powder.

Ruschke, P. *et al*, *Z. Naturforsch., B*, 1980, **35**, 1589 (*synth, ir*)
Godemeyer, T. *et al*, *Z. Anorg. Allg. Chem.*, 1988, **566**, 77 (*synth*)

Br_3Nb IC-001956

Niobium bromide ($NbBr_3$), 11CI

Niobium tribromide

[15752-41-7]

$NbBr_3$

M 332.6

Homogeneous phases exist with Br:Nb ratio between 2.67 and 3.03:1. See also Niobium bromide (Nb_3Br_8), IC-002214. Synth. from $NbBr_5$ and Nb at 400-500° or by H_2 reduction of $NbBr_5$. Dark brown solid. Subl. 400 *in vacuo*. Paramagnetic, μ_{eff} = $1.14\mu_B$, θ −140K.

Br_3NbO IC-001957

Niobium(*V*) bromide oxide ($NbBr_3O$), 11CI

Niobium tribromide oxide

[14459-75-7]

$NbOBr_3$

M 348.6

Synth. by heating $NbBr_5$ with Nb_2O_5 or O_2 above 250°; or from Nb_2O_5 and BBr_3 at 280°. Yellow solid. Subl. $_{0.05}$ 190°.

Br_3NbS IC-001958

Niobium(*V*) bromide sulfide ($NbBr_3S$), 11CI

Niobium tribromide sulfide

[60994-02-7]

$NbSBr_3$

M 364.6

Synth. from $NbBr_3$ and Sb_2S_3 in CS_2. Red solid.

Fowles, G.W.A. *et al*, *J. Chem. Soc., Chem. Commun.*, 1976, 552 (*synth*)
bin Baba, I., *Sains Malays.*, 1981, **10**, 69 (*synth*)

Br_3NbSe IC-001959

Niobium(*V*) bromide selenide ($NbBr_3Se$), 11CI

Niobium tribromide selenide

[60994-04-9]

$NbSeBr_3$

M 411.5

Synth. from $NbBr_5$ and Sb_2Se_3 in CS_2 or in the solid state. Dark brown solid.

Fowles, G.W.A. *et al*, *J. Chem. Soc., Chem. Commun.*, 1976, 552 (*synth*)
bin Baba, I., *Sains Malays.*, 1981, **10**, 69 (*synth*)
Drew, M.G.B. *et al*, *J. Chem. Soc., Dalton Trans.*, 1984, 1087 (*synth, reactions*)

$Br_3Nb_3Se_{10}$ IC-001960

Niobium bromide diselenide ($Nb_3Br_3(Se_2)_6$), 11CI

Niobium bromide selenide ($Nb_6Br_6Se_{20}$)

[102402-06-2]

$Nb_3Br_3(Se_2)_5$

M 1308.0

Chain struct. in which one Nb is in sq. antiprismatic coordination by four Se_2 groups forming a bridge between two other Nb with 1 terminal Br and 1 bridging Se_2. Formed as a by-product in the synthesis of $NbSe_3Br$ from Nb + Se + Br_2 in a sealed SiO_2 tube at 600-700°. Black solid.

Meerschaut, A. *et al*, *J. Solid State Chem.*, 1986, **61**, 90 (*synth, cryst struct*)

Br_3Nd IC-001961

Neodymium(*III*) bromide ($NdBr_3$)

Neodymium tribromide

[13536-80-6]

$NdBr_3$

M 383.9

Has $PuBr_3$ struct. Green cryst. Sol. H_2O. Mp 684° (671°). Bp 1540°.

Hexahydrate: [29843-90-1].
$Br_3H_{12}NdO_6$ M 492.0
Blue cryst. Sol. H_2O. Loses H_2O on controlled heating *in vacuo*. Isostructural with corresp. chloride.

Zachariasen, W.H., *Acta Crystallogr.*, 1948, **1**, 265.

Br_3NdO_9 IC-001962

Neodymium(*III*) bromate ($Nd(BrO_3)_3$)

Neodymium tribromate

$Nd(BrO_3)_3$

M 527.9

Nonahydrate: Nonaaquaneodymium(3+) tris(bromate)
$Br_3H_{18}NdO_{18}$ M 690.0
Red cryst. Insol. H_2O. Mp 66-67°. Contains tricapped trigonal prismatic $Nd(OH_2)_9^{3\oplus}$ ions. Loses H_2O at 150°.

Helmholz, L., *J. Am. Chem. Soc.*, 1939, **61**, 1544.

$Br_3Ni^{\ominus}$ IC-001963

Tribromonickelate(*II*)(1−), 8CI

$[NiBr_3]^{\ominus}$

M 298.4 (ion)

Octahedral polymer. Antiferromagnetic. Many studies of magnetism, uv-vis spectra etc at low temps. particularly of Cs salt.

Cs salt: [15455-70-6]. *Caesium nickel bromide ($CsNiBr_3$)*
Br_3CsNi M 431.3
Brown cryst.

Me_4N salt: [15455-68-2].
Red brown needles.

Br_3Np IC-001964

Neptunium(*III*) bromide ($NpBr_3$)

Neptunium tribromide

[20730-39-6]

$NpBr_3$

M 476.7

Exists in α (hexagonal) and β (orthorhombic)forms. α-form has UCl_3 structure (9-coordinate). β-form has $PuBr_3$ structure (8-coordinate). Green solid. Sol. H_2O. Subl. 800°. μ_{eff} = $3.26\mu_B$ (50-125K).

Br_3PSe IC-001977

Selenophosphoryl bromide, 10CI

Tribromophosphine selenide. Tribromoselenoxophosphorus(V). *Phosphorus*(V) *bromide selenide* (*PBr_3Se*)

[62565-69-9]

$P(Se)Br_3$

M 349.6

Not isol. Synth. from PBr_3 + Se or from $MeSePBr_2$ + Br_2. Phys. props. not recorded.

Baudler, M. *et al*, *Z. Naturforsch., B*, 1977, **32**, 347 (*synth, P-31 nmr*)

Br_3Pm IC-001978

Promethium(*III*) bromide ($PmBr_3$)

Promethium tribromide

[14325-78-1]

$PmBr_3$

M 384.6

8-Coord.; adopts the $PuBr_3$ struct. Coral-red cryst. Sol. H_2O. Mp 660° (est.), (625°).

[116797-91-2]

Weigel, F. *et al*, *Radiochim. Acta*, 1967, **7**, 40 (*synth, cryst struct*)

Br_3Pr IC-001979

Praseodymium(*III*) bromide ($PrBr_3$)

Praseodymium tribromide

[13536-53-3]

$PrBr_3$

M 380.6

Has UCl_3 struct. Green cryst. Sol. H_2O, THF. Mp 693° (691°). Bp 1547°.

Heptahydrate: [20736-90-7].
$Br_3H_{14}O_7Pr$ M 506.7
Green cryst. Sol. H_2O. Loses H_2O on controlled heating *in vacuo*. Prob. isostructural with corresp. chloride.

Zachariasen, W.H., *Acta Crystallogr.*, 1948, **1**, 265 (*struct*)

Br_3Pt IC-001980

Platinum(*III*) bromide ($PtBr_3$), 9CI
Platinum tribromide
[25985-07-3]

$PtBr_3$

M 434.7
Struct. contains Pt_6Br_{12} octahedra (see Platinum(*II*) bromide ($PtBr_2$), IC-001880) and chains of $PtBr_6$ octahedra. Synth. from Platinum(*IV*) bromide ($PtBr_4$), IC-002067 heated in Br_2 (g). Green-black solid.

Br_3Pu IC-001981

Plutonium(*III*) bromide ($PuBr_3$)
Plutonium tribromide
[15752-46-2]

$PuBr_3$

M 478.7
Structural prototype. 8-Coord. Pu in layer struct. with layer packing unusually close for contact between non-bonded Br atoms. Light green solid. Sol. H_2O. Mp 681°. Reacts with water to form hexahydrate.

Hexahydrate: [20737-00-2].
Hexaaquadibromoplutonium(1+) bromide
Blue cryst. Sol. H_2O. Can be dehydrated to $PuBr_3$ on careful heating *in vacuo* at 70-120°. Probably best formulated as $PuBr_2(OH_2)_6^{\oplus}Br^{\ominus}$.

Br_3Rh IC-001983

Rhodium(*III*) bromide ($RhBr_3$), 8CI
Rhodium tribromide. Tribromorhodium
[15608-29-4]

$RhBr_3$

M 342.6
Prepared by heating Rh metal in a 45% HBr-Br_2 mixture, then treating the product in a Br_2 stream at 400°. Commercially available. Dark brown plates. Insol. acids, org. solvs. Thermally stable up to 805° at which temp. dec. commences. Insolubility restricts synthetic use.

Thiele, G., *Fortschr. Chem. Forsch.*, 1968, **10**, 631, 644.

Br_3Ru IC-001984

Ruthenium(*III*) bromide ($RuBr_3$)
Ruthenium tribromide
[14014-88-1]

$RuBr_3$

M 340.7
Exists as chains of $(Ru_2Br_3)Br_{\frac{6}{2}}$ groups, with the metal in approx. octahedral coordination. The short Ru—Ru distance between discrete Ru_2 pairs is 273 pm; the Ru_2 units are separated by 312 pm. Ru—Br 246 (within dimeric units); Ru—Br 253 pm (between units). Prepd. by direct combination of the elements at 450-500°/20 atm. Black rhombic cryst. Insol. H_2O, acid, EtOH and other common solvs. Dec. >500° to give Ru + Br_2. Shows weak temp.-independent paramagnetism. ΔG_f° −126 kJ mol^{-1}. ΔH_f° −184 kJ mol,$^{-1}$. ΔS° −205 J K^{-1} mol^{-1}.

Hydrated-form
Ruthenium(III) *bromide* (*hydrated*). *Soluble ruthenium*(III) *bromide*
$RuBr_3.xH_2O$. Like commercial ruthenium(*III*) chloride, this material is prob. a heterogenous mixt. of bromide, oxide bromide and aquabromo complexes. Prepd. by adding RuO_4 to aq. HBr or by dissolving 'ruthenium(*III*) hydroxide' in aq. HBr. V. useful starting material for the synth. of bromide complexes. Red-brown solid. V. sol. H_2O, HBr.

Br_3STa IC-001985

Tantalum(*V*) bromide sulfide ($TaBr_3S$), 11CI
[60994-05-0]

$TaBr_3S$

M 452.7
Synth. from $TaBr_5$ and Sb_2S_3 in CS_2 in the absence of O_2 or from $TaBr_5$ and Sb_2S_3 at 110° for 10 days. Red-orange solid. Forms adducts $TaBr_3SL_2$(L = MeCN, tetrahydrothiophene, Me_2S).

Br_3Sb IC-001986

Antimony(*III*) bromide ($SbBr_3$), 8CI
Tribromostibine, 9CI. Tribromoantimony(III). *Antimonous bromide*
[7789-61-9]

$SbBr_3$

M 361.4
Synth. from Sb + Br_2; $SbCl_3$ or Sb_2O_3 + BBr_3. White cryst. becoming amber yellow when fused. Hygroscopic. Sol. H_2O. Sol. dil. HCl, HBr, CS_2, Me_2CO, C_6H_6, $CHCl_3$. Mp 96°. Bp 288°, Bp_2 135°. A Lewis acid, forming adducts with Lewis bases e.g. aromatic hydrocarbons; NH_3, amines. Reactive to O, N and S nucleophilic reagents, as well as carbanionic reagents e.g. alkyl(aryl)lithiums and Grignard reagents. ΔH_f° −259 kJ mol^{-1}. Forms complex bromides with bromides of other metals e.g. those of Group I. Dec. in H_2O, light, EtOH.

▷ Poison. Corrosive, can cause severe burns. CC4400000.

Benzene complex (*2:1*): (*Benzene*)*bis*[*tribromoantimony*(III)]

Br_5Tl

Titanium bromide ($TiBr_5$), 11Cl IC-001994

Titanium tribromide

[13135-31-4]

$TiBr_5$

M 287.5
Struct. resembles a-$TiCl_3$. Synth. by vapour phase transport from Ti, Br_2 and Al_2Br_6; by reaction of $TiCl_3$ with BBr_3 or by reducing $TiBr_4$ with Al at 250° or with Ti at 550°. Can be used in removal of basic N from lubricating oil. Catalyst component. Grey-black solid. Disproportionates to $TiBr_4$ and $TiBr_2$ above 350°. Mp 39°. Bp 230°. Weakly paramagnetic.

Br_5Tl

Thallium(*III*) bromide ($TlBr_3$) IC-001995

Thallium tribromide

[13701-90-1]

$TlBr_3$

M 444.0
Highly unstable. Synth. by adding Br_2 to suspension of $TlBr_2$ in inert solv. Used in synth. of organothallium compds., in oxidation of org. compds., eg. ethylene → ethylene glycol.

▷ Toxic.

Tetrahydrate: Obt. from the anhydr. compd. in aq. soln. Orthorhombic pale yellow needles. Dec. to $Tl_2Br_6.H_2O$, Br_2 at 30°. Sol. H_2O (yellow soln.). Trigonal bipyramidal at Tl (2 axial O and 3 equatorial Br).

Br_3Tm

Thulium(*III*) bromide ($TmBr_3$) IC-001996

Thulium tribromide

[14456-51-0]

$TmBr_3$

M 408.6
White solid. Sol. H_2O. Mp 952°. ~ 1440°°.

Hexahydrate: [15163-00-5].
$Br_3H_{12}O_6Tm$ M 516.7
Colourless cryst. Sol. H_2O. Loses H_2O on controlled heating *in vacuo*. Isostructural with corresp. chloride.

Br_3U

Uranium(*III*) bromide (UBr_3) IC-001997

Uranium tribromide

[13470-19-4]

UBr_3

M 477.7
Possesses the UCl_3 struct. Synth. from UH_3 + HBr or U/Br_2. Hygroscopic red needles. Sol. H_2O. Mp 730° (?27°). Bp 1537°.

▷ Reportedly attacks glass at high temps.

$Br_3V^{\oplus}$

Tribromovanadate(*II*)(1−), 11Cl IC-001998

$[VBr_3]^{\oplus}$

M 290.6 (ion)
Salts have $CsNiCl_3$ struct. All salts are weakly antiferromagnetic with Néel temps. in the range 13-23K. Other alkali metal, and $NH_4^{\oplus}$ salts are known. The NaBr/VBr_3 system is purely eutectic, others show compd. formation.

K salt: [66752-78-1].
Br_3KV M 329.7
Synth. like the Cs salt. Brown solid.

Cs salt: [43645-25-6].
Br_3CsV M 423.5
Synth. by melting CsBr and VBr_2 or by electrolytic reduction of V(*V*) in aq. HBr with addn. of CsBr. Brown solid. Paramagnetic: μ_{eff} = 2.39μ_B (298K); 1.64μ_B (100K). *T*, 20.4K.

Cs salt, trihydrate: [38832-64-3].
Synth. by mixing CsBr and VBr_2 in aq. HBr. Green solid. A violet hexahydrate is also known (see Hexaaquavanadium(*II*)(2+), IC-019904).

Tl salt: [66752-76-9]. *Thallium(I) tribromovanadate(II)*
Br_3TlV M 495.0
Synth. by melting TlBr and VBr_2.

IC-002000

Br_3Y

Yttrium(*III*) bromide (YBr_3)

Yttrium tribromide

[13469-98-2]

YBr_3

M 328.6

Can be synth. from YH_2 or YH_3 and Br_2 at 450°; or by heating $(NH_4)_3YBr_6$ *in vacuo* at 350-400°. Deliquescent white cryst. Sol. H_2O, EtOH. Mp 904° (912°).

Hexahydrate: [15163-02-7].

$Br_3H_{12}O_6Y$ M 436.7

Deliquescent colourless cryst. V. sol. H_2O. Loses H_2O on controlled heating *in vacuo* at 60-170°/0.002 mm. Prob. isostructural with corresp. chloride.

IC-002003

Br_3Zr

Zirconium bromide ($ZrBr_3$), 11Cl

Zirconium tribromide

[24621-18-9]

$ZrBr_3$

M 330.9

Struct. comprises chains of face-sharing octahedra with equally spaced Zr atoms. Non-stoichiometric in the range 2.8 ⩽ Zr:Br ⩽ 3.32 (435°), 2.83 (775°) with lattice constants decreasing smoothly as Br content increases. Synth. by reducing $ZrBr_4$ with Zr or Al. Absorbent in artificial kidneys (see also Zirconium bromide ($ZrBr_2$), IC-001901 and Zirconium bromide ($ZrBr_4$), IC-002090). Blue-black solid if synth. above 485° otherwise a dark green polymorph is formed. Both disproportionate at 500° → $ZrCl_2$ and $ZrCl_4$.

$Br_4Cr^{3\ominus}$

Tetrabromochromate(*II*)(2−), 11Cl, 10Cl, 9Cl IC-002008

$[CrBr_4]_n^{2n\ominus}$ sheets

M 371.6 (ion)

Salts are ferromagnetic. Struct. and props. prob. as Tetrachlorochromate(*II*)(2−), IC-016988.

Di-Cs salt: [51159-52-5]. *Caesium tetrabromochromate* (*Cs_2CrBr_4*)

Br_4CrCs_2 M 637.4

Air-sensitive dark green powder. Ferromagnetic.

Di-NH_4 salt: [51181-52-3].

Air-sensitive orange-brown powder. Antiferromagnetic; struct. unknown.

Bis-$MeNH_3$ salt: [77135-52-5].

Air-sensitive greenish-yellow cryst. Ferromagnetic, other monoalkylammonium salts also known.

Bis-Me_2NH_2 salt: [77135-51-4].

Light-green air-sensitive cryst. Antiferromagnetic; struct. unknown.

Bis-pyridinium salt: [51159-54-7].

Air-sensitive yellow solid. Antiferromagnetic; struct. unknown.

Bis-$PhCH_2NH_3$ salt: [102629-61-8].

Yellow air-sensitive cryst. Ferromagnetic.

Br_4Cr

Chromium(*IV*) bromide ($CrBr_4$) IC-002009

Chromium tetrabromide. Tetrabromochromium(IV)

[23098-84-2]

$CrBr_4$

M 371.6

Tetrahedral struct. proposed. Synth. from $CrBr_3$ and excess Br_2 at high temp. Gas at high temp.

Ciuni, B. *et al*, *Spectrochim. Acta, Part A*, 1978, **34**, 247 (*synth, raman*)

$Br_4CrH_4O_2^{1\ominus}$

Diaquatetrabromochromate(*II*)(2−), 11Cl, 10Cl, 9Cl IC-002010

$[CrBr_4(OH_2)_2]^{\ominus}$

M 407.6 (ion)

Distorted octahedral anion; see also Diaquadibromochromium(*II*), IC-001783. Salts crystallise from halides in HBr aq. Salts are high spin; thermal dehydration gives salts of Tetrabromochromate(*II*)(2−), IC-002008.

Di-Rb salt: [50774-41-9]. *Rubidium diaquatetrabromochromate*(II). *Rubidium tetrabromochromate*(II) *dihydrate*

$Br_4CrH_4O_2Rb_2$ M 578.5

Light blue air-sensitive cryst. (HBr).

Di-Cs salt: [50937-51-4]. *Caesium diaquatetrabromochromate*(II). *Caesium tetrabromochromate*(II) *dihydrate*

$Br_4CrCs_2H_4O_2$ M 673.4

Light blue air-sensitive cryst. (HBr).

Di-NH_4 salt: [77209-50-8].

Light turquoise air-sensitive cryst. (HBr).

Bis-pyridinium salt: see Diaquadibromochromium(II), IC-001783

[50774-42-0]

IC-002012

Br_4F_2Mo

Molybdenum bromide fluoride ($MoBr_4F_2$), 9CI

Molybdenum tetrabromide difluoride

$MoBr_4F_2$

M 453.5
The ir spectrum suggests both *cis*- and *trans*-isomers present. Formed in low yield (<1%) in the reaction of $Mo(CO)_6$, Br_2 and MoF_6. Dark red, volatile material.

[25029-60-1, 25029-61-2]

Mercer, M. *et al, J. Chem. Soc. A*, 1969, 2532 (*synth*)

IC-002013

$Br_4Fe^{2\ominus}$

Tetrabromoferrate(*II*)(2−), 11Cl

[33914-62-4]

$[FeBr_4]^{2\ominus}$ (T_d)

M 375.4 (ion)
Characterised by ir absorp. ≃ 220 cm^{-1}.
Bis-Et_4N salt: Synth. from $FeBr_2.2H_2O$ + $[Et_4N]Br$ in EtOH. Cream-coloured needles (stable to oxidn when dry) or pale brown cryst. (EtOH).

$Br_4Fe^{\ominus}$

Tetrabromoferrate(*III*)(1−), 11Cl

[20519-31-7]

$[FeBr_4]^{\ominus}$ (T_d)

M 375.4 (ion)
Catalyst. Useful large anion for precipitation of salts. Has been used in extraction of Fe. Readily hydrol.
Cs salt: [83779-08-2]. *Caesium iron(III) bromide ($CsFeBr_4$)*
Br_4CsFe M 508.3
Ph_4P salt: Golden-brown leaflets. Mp 105-106°. On melting, evolves HBr.
Et_4N salt: [21279-19-6].
Synth. from $FeBr_3$ + $[Et_4N]Br$. Cryst. (hot EtOH). Sol. Me_2CO. μ_{eff} = 1.52 (1.4K), 6.02μ_B (298K).

Sheldon, J.C. *et al, J. Am. Chem. Soc.*, 1958, **80**, 2117 (*synth, Ph_3PH salt*)
Ginsberg, A.P. *et al, Inorg. Chem.*, 1963, **2**, 817 (*synth, magnetism, Et_4N salt*)

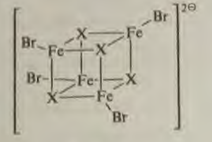
Rodriguez, F. *et al, Transition Met. Chem.*, 1985, **10**, 351 (*esr*)
Muraoka, T. *et al, Inorg. Chim. Acta*, 1986, **124**, 49 (*mcd*)

$Br_4Fe_4S_4^{2\ominus}$ IC-002015

Tetrabromotetra-μ_3-thioxotetraferrate(2−), 11Cl

Tetrabromotetra-μ_3-sulfidotetraferrate(2−)

[65107-38-2]



X = S

M 671.2 (ion)
Mixed oxidation state 2Fe(*III*)2Fe(*II*) compd. Synthetic model for ferredoxins. Precursor to higher nuclearity clusters.
Bis-Et_4N salt: [65208-04-0].
Obt. by reaction of $FeBr_3$ + NaSPh + $[Et_4N]Br$ in MeCN with S. Black cryst. Insol. Et_2O; sol. MeCN. Iodo analogue similarly prepd.
Bis-Ph_4P salt: [97225-95-1].
Obt. by bubbling H_2S through $FeSO_4.7H_2O$ in DMF containing $[Ph_4P]Br$ in presence of O_2.

Wong, G.B. *et al, Inorg. Chem.*, 1978, **17**, 578 (*synth, magnetism, spectra, electrochem*)
Mueller, A. *et al, Chimia*, 1985, **39**, 23, 24 (*synth, cryst struct*)
Mueller, A. *et al, Naturwissenschaften*, 1986, **73**, 669 (*synth*)
Rutchik, S. *et al, Inorg. Chem.*, 1988, **27**, 1513 (*synth, cryst struct*)
Coucouvanis, D. *et al, Inorg. Chem.*, 1988, **27**, 4066 (*synth*)

$Br_4Fe_4Se_4^{2\ominus}$ IC-002016

Tetrabromotetra-μ_3-selenotetraferrate(2−)

As Tetrabromotetra-μ_3-thioxotetraferrate(2−), IC-002015 with

X = Se

M 858.8 (ion)
Bis-Et_4N salt: [113748-21-3].
Synth. from $FeBr_3$, Na_2Se, $[Et_4N]Br$ in DMF. Black cryst. μ_{eff} = 2.19μ_B (302K).

Rutchik, S. *et al, Inorg. Chem.*, 1988, **27**, 1513 (*struct, synth*)

$Br_4Ga^{\ominus}$ IC-002017

Tetrabromogallate(*III*)(1−)

[17611-23-3]

$[GaBr_4]^{\ominus}$

M 389.3 (ion)
λ 103.1 Ω^{-1} cm^2 mol^{-1}.
Na salt: [30487-88-8].
Br_4GaNa M 412.3
Synth. from NaBr + $GaBr_3$. Colourless moisture sensitive cryst. (melt). Mp 190°.
K salt: [50328-30-8].

Br_4GaK M 428.4
Synth. from KBr + $GaBr_3$. Colourless moisture-sensitive cryst. (melt). Mp 196°.
Rb salt: [52582-08-8].
Synth. from RbBr + $GaBr_3$. Colourless moisture-sensitive cryst. (melt). Mp 252°.
Cs salt: [52582-09-9].
Synth. from CsBr + $GaBr_3$. Colourless moisture-sensitive cryst. (melt). Mp 320°.
Et_4N salt: [33896-84-3].
$C_8H_{20}Br_4GaN$ M 519.5
Electrochemical synth. from Ga, Br_2 and $[Et_4N]Br$ in MeOH-C_6H_6 (1:4). Yellow cryst. Spar. sol. C_6H_6, MeOH, Et_2O.
Tetrabutylammonium salt: [34249-07-5].
Electrochemical synth. Cream-coloured cryst. ($CHCl_3/Et_2O$). Sol. $CHCl_3$; spar. sol. Et_2O.
Tl salt: [52582-10-2].
Br_4GaTl M 593.7
Colourless moisture-sensitive cryst. Mp 184°.

Br_4GaIn IC-002018

Gallium indium bromide ($GaInBr_4$)

$Br_2Ga—InBr_2$

M 504.1
Isol. as complexes. Synth. from fused Ga, $GaBr_3$, In, $InBr_3$ mixture.
Bis-THF complex: [81182-68-5].
Dibromo[dibromo(tetrahydrofuran)gallium](tetrahydrofuran)indium, 10CI
$C_8H_{16}Br_4GaInO_2$ M 648.3
White solid.
Bis-tetrahydropyran complex: [81182-66-3].
Dibromo[dibromo(tetrahydro-2H-pyran)gallium](tetrahydro-2H-pyran)indium, 10CI
$C_{10}H_{20}Br_4GaInO_2$ M 676.4
White solid.
Bis-dioxan complex: [81182-64-1]. *Dibromo[dibromo(1,4-dioxane-O^1)gallium](1,4-dioxane-O^1)indium, 10CI*
$C_8H_{16}Br_4GaInO_4$ M 680.3
White solid.
Piperazine complex: [81182-60-7].
White solid.

Sinclair, I. *et al, Inorg. Nucl. Chem. Lett.*, 1981, **17**, 279 (*synth, complexes*)

Br_4Ga_2 IC-002019

Gallium(*I*) tetrabromogallate(*III*)

[18897-61-5]

$Ga[GaBr_4]$

M 459.0
Formerly described as Gallium(*II*) bromide. From Ga + $GaBr_3$ at 180°. White moisture-sensitive solid. Mp 167°. Many complexes descr. See e.g. Tetrabromobis(1,4-dioxane-O^1)digallium, IC-006067.
Tetrabromobis(pyridine)digallium, IC-006782.
Conductivity 15.5 Ω^{-1} m^{-1} at 170°.
'Monomer':
Br_3Ga M 229.5

Woodward, L.A. *et al, J. Chem. Soc.*, 1958, 1505 (*synth, raman*)

Br_4Ge IC-002020

Germanium bromide ($GeBr_4$)

Germanium tetrabromide. Tetrabromogermane

[13450-92-5]

$GeBr_4$

M 392.2
Grey-white octahedral cryst. Dec. in H_2O; sol. EtOH, Et_2O, C_6H_6. d^{30} 2.1. Mp 26°. Bp 186°.
▷ LY5220000.

Andrews, S.P. *et al, J. Chem. Res. (S)*, 1978, 94 (*ir, raman*)

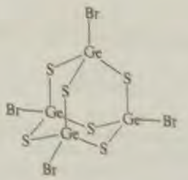
$Br_4Ge_4S_6$ IC-002021

Germanium bromide sulfide ($Ge_4Br_4S_6$)

1,3,5,7-Tetrabromo-2,4,6,8,9,10-hexathia-1,3,5,7-tetragermatricyclo[3.3.1.1^{3,7}]decane, 9CI. Tetragermanium tetrabromide hexasulfide

[58356-00-6]



M 802.4
Adamantane-like struct. Synth. by adding H_2S to a boiling soln. of $GeBr_4$ in CS_2. Cryst. Mp 305° dec.

Pohl, S., *Angew. Chem., Int. Ed. Engl.*, 1976, **15**, 162 (*synth, cryst struct, raman*)
Pohl, S. *et al, Z. Naturforsch., B*, 1981, **36**, 1432 (*cryst struct, raman*)

$Br_4HIOPt^{2\ominus}$ IC-002022

Tetrabromohydroxyiodoplatinate(*IV*)(2−), 9CI

[54374-98-0]

$[Pt(OH)Br_4I]^{2\ominus}$

M 658.6 (ion)

Not isol. One product formed from reaction of $I^{\ominus}$ with $[PtBr_4]^{2\ominus}$ in H_2O at high pH. Isomerism not investigated.

Johnson, D.W. et al, Can. J. Chem., 1974, 52, 3083.

IC-002023

Br_4HSb

Hydrogen tetrabromoantimonate(*III*)(1−), 8CI

Tetrabromoantimonic(III) acid

$H[SbBr_4]$

M 442.3

Salts synth. from $SbBr_3$ + amine in HBr aq.

Et_2NH salt: [59450-14-5].
Solid. Mp 120-126°.

Et_3N salt: [38333-03-8].
Solid. Mp 192°.

Aniline salt: [54205-54-8].
Solid. Mp 128°.

Py salt: [52279-30-8]
$C_5H_6Br_4NSb$ M 521.4
Pale yellow needles or yellow plates (MeCN). Mp 126° (216-217.5°). Octahedrally coordinated anion. Interatomic distance: Sb—Br 256.4-282.2 pm.

Quinoline salt: [52279-33-1].
Light yellow needles. Mp 245°.

Isoquinoline salt: [52279-34-2].
Mp 260-263°.

IC-002024

$Br_4H_2IOPt^{\ominus}$

Aquatetrabromoiodoplatinate(*IV*)(1−), 9CI

[54374-97-9]

$[(H_2O)PtBr_4I]^{\ominus}$

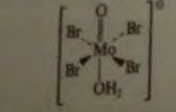
M 659.6 (ion)
Not isol. One product from reaction of $I^{\ominus}$ with $[PtBr_4]^{2\ominus}$ in H_2O. Isomerism not investigated.

Johnson, D.W. et al, Can. J. Chem., 1974, 52, 3083 (synth)

IC-002025

$Br_4H_2MoO_3^{\ominus}$

Aquatetrabromooxomolybdate(*V*)(1−), 10CI, 9CI



M 449.5 (ion)
trans-Octahedral anion, interatomic distances (av.): Mo=O 162, Mo—Br 253, Mo—OH_2 232 pm. Isomorphous with $[MoOCl_4(OH_2)]^{\ominus}$.

Et_4N salt: [52729-41-6].
Synth. from $[Et_4N]Cl$ and $Mo_2(OAc)_4$ in HBr. Yellow cryst.

Ph_4As salt: [35772-28-2].
Brown tetragonal prisms.

Pyridinium salt: [71096-99-6].
Air-stable yellow cryst. + HBr (HBr). Formulated as $(PyH)_4[MoOBr_4(OH_2)]_2Br_2$.

Seane, J.G., *Acta Crystallogr., Sect. B*, 1967, **23**, 85 (*cryst struct*)

IC-002026

$Br_4H_2NOOs^{\ominus}$

Aquatetrabromonitridoosmate(*VI*)(1−)

[59187-89-2]

$[N{\equiv}OsBr_4(OH_2)]^{\ominus}$ (C_{4v})

M 541.8 (ion)

K salt: [62121-43-1].
Orthorhombic cryst. + $1H_2O$.

Tetrapropylammonium salt: [59187-90-5].
Synth. from $[Pr_4N]Cl$ and $K[OsO_3N]$ in HBr.

Cleare, M.J. *et al, J. Chem. Soc. A*, 1970, 1117 (*use*)
Griffith, W.P. *et al, J. Chem. Soc., Dalton Trans.*, 1973, 1315 (*use*)

IC-002027

$Br_4H_2O_2Re^{\ominus}$

Aquatetrabromooxorhenate(*V*)(1−)

$[O{=}ReBr_4(H_2O)]^{\ominus}$

M 539.8 (ion)
Aqua complex of Tetrabromorhenate(*V*)(1−). IC-002051. Octahedral.

trans-form
Interatomic distances: Re=O ~ 171, Re—OH_2 ~ 232, Re—Br ~ 251 pm.

Et_4N salt: [35788-72-8].
Synth. from $ReBr_3$ and Et_4NBr in 48% HBr in air. Ruby-red cryst.

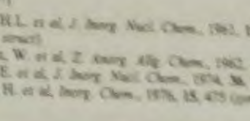
Cotton, F.A. *et al, Inorg. Chem.*, 1965, **4**, 1627; 1966, **5**, 9 (*synth, cryst struct, ir, uv, props*)
Shusterovich, E.M. *et al, Zh. Strukt. Khim.*, 1972, **13**, 111 (*struct*)

IC-002028

$Br_4H_2O_2Tc^{\ominus}$

Tetrabromoaquaoxotechnetate(*V*)(1−)

[128642-51-3]



M 452.5 (ion)
trans-Octahedral anion. Prep. by HBr reduction of $TcO_4^{\ominus}$ at −5°.

Et_4N salt: [128642-52-4].
Dichroic green-orange solid. Sol. MeCN, $CHCl_3$, EtOAc. Insol. Et_2O, hydrocarbons. Dec. in alcohols.

Mantegazzi, D. *et al, Inorg. Chim. Acta*, 1989, **167**, 195 (*synth, uv, ir, cryst struct*)

$Br_4H_4InO_2^{\ominus}$

Diaquatetrabromoindate(*III*)(1−) **IC-002029**

$[InBr_4(OH_2)_2]^{\ominus}$

M 470.4 (ion)
trans-Octahedral anion.

K salt: [73515-96-5].
$Br_4H_4InKO_2$ M 509.5
Obt. by slow evaporation of an aq. soln. of $InBr_3$ and KCl. Hygroscopic white cryst. (H_2O).

Wignacourt, J.-P. *et al, Acta Crystallogr., Sect. B*, 1980, **36**, 669 (*synth, cryst struct*)

$Br_4H_4O_2Pt$

Diaquatetrabromoplatinum(*IV*), 9CI **IC-002030**

Platinum(IV) *bromide dihydrate. Platinum tetrabromide dihydrate*

[35902-35-3]

$(H_2O)_2PtBr_4$

M 550.7
Not isol. but both isomers formed in aq. solns. containing $Br^{\ominus}$ and $Pt^{2\oplus}$.

[63357-74-4, 63357-75-5]

Elding, L.I. *et al, Inorg. Chim. Acta*, 1971, **5**, 643; 1977, **22**, 201 (*uv, reactions*)

$Br_4H_4O_2Ru^{\ominus}$

Diaquatetrabromoruthenate(*III*)(1−) **IC-002031**

$[Ru(OH_2)_2Br_4]^{\ominus}$

M 456.7 (ion)
Geometry unknown. All the salts are poorly characterised. Sol. H_2O.

Bulvidaite, M., *Z. Anorg. Allg. Chem.*, 1937, **230**, 285 (*synth*)

$Br_4H_4O_2Tc$

Diaquatetrabromotechnetium(*IV*) **IC-002032**

Technetium(IV) *bromide dihydrate*

[113488-89-4]

$TcBr_4(OH_2)_2$

M 454.5
Rare example of H_2O coordinated to technetium (though cf. e.g. (Aqua)pentachlorotechnetate(*IV*)(1−), IC-017173).

Mirch, J.G. *et al, J. Radioanal. Nucl. Chem.*, 1989, **132**, 293.

Br_4Hf

Hafnium bromide ($HfBr_4$), 11CI **IC-002033**

Hafnium tetrabromide

[13777-22-5]

$HfBr_4$

M 498.1
Prob. has SnI_4 struct. in the solid state. Tetrahedral molecule in gas phase. Synth. from HfO_2, Br_2 and C at 400°, by reaction of Hf with molten $PbBr_2$, or $HfCl_4$ with BBr_3, or from Hf and Br_2 at 400°. Colourless to yellow solid. Mp 425°. Subl. 420° in vacuo. ΔH_f° −840 kJ mol^{-1}.

Berdonosov, S.S. *et al, Russ. J. Inorg. Chem. (Engl. Transl.)*, 1963, **8**, 277 (*synth, cryst struct*)

$Br_4I_6Mo_6$

Octaiodohexamolybdenum tetrabromide **IC-002034**

Molybdenum bromide iodide ($Mo_6Br_4I_6$)

$Mo_6I_6Br_4$

M 1910.4
Presumed to contain clusters of Mo_6 octahedra. Prepd. by addition of HBr to alk. MoI_2 solns.

Sheldon, J.C., *J. Chem. Soc.*, 1962, 410 (*remark*)

$Br_4In^{\ominus}$

Tetrabromoindate(1−) **IC-002035**

[17611-24-4]

$[InBr_4]^{\ominus}$ (T_d)

M 434.4 (ion)
$[InBr_3X]^{\ominus}$ and $[InBr_2X_2]^{\ominus}$ where X = Cl or I are also known.

Me_4N salt: [21288-93-7].
Synth. from aq. $InBr_3$ and $[Me_4N]Br$. Colourless cryst. (4*M* HBr). Mp 236-238°. Other R_4N salts also descr.

Butyltriphenylphosphonium salt: [33751-02-9].
Synth. from aq. $InBr_3$ and $[BuPh_3P]Br$. Colourless cryst. (EtOH). Mp 71°.

Ekeley, J.B. *et al, J. Am. Chem. Soc.*, 1936, **58**, 907 (*synth*)

Br_4In_3

Indium(*I*) tetrabromoindate(*III*) **IC-002036**

[33939-40-1]

$In[InBr_4]$

M 549.2
Formerly descr. as $InBr_2$. Synth. from $InBr_3$ and In in hot xylene. Colourless moisture sensitive needles (xylene). Mp 200°.

'Monomer': Indium dibromide (incorr.)
Br_2In M 274.6
Not isol.

[14226-34-7]

Walter, P.H.L. *et al, J. Inorg. Nucl. Chem.*, 1961, **19**, 223 (*synth, powder struct*)

$Br_4Mn^{2\ominus}$

Tetrabromomanganate(*II*)(2−) **IC-002037**

$[MnBr_4]^{2\ominus}$ (T_d)

M 374.5 (ion)

Di-Li salt: [78528-06-0]. *Lithium tetrabromomanganate(II)* (Li_2MnBr_4)
Br_4Li_2Mn M 388.4

Synth. from LiBr, Mn and Br_2 in Et_2O. Reacts with $LiAlH_4$ in Et_2O at −80° to give $Mn(AlH_4)_2$.

Di-Cs salt:
Br_4Cs_2Mn M 640.3
Synth. from CsBr and $MnBr_2$ at 650° *in vacuo*. Greenish-yellow hygroscopic cryst. Mp 518°. Rhombic isotype of Cs_2ZnBr_4 and Cs_2CuBr_4.

Bis-Me_2NH_2 salt: Synth. from $[Me_2NH_2]Br$ and $MnBr_2$ in EtOH. Green-yellow needles. Sol. H_2O, MeOH, EtOH, MeCN.

Bis-Et_4N salt: [2536-14-3].
Synth. from $[Et_4N]Br$ and $MnBr_2$ in H_2O, EtOH or $SOBr_2$. Green-yellow needles. Sol. CH_2Cl_2. Mp 300°. $\mu_{eff} = 5.97\mu_B$.

Br_4Mo

Molybdenum(*IV*) bromide ($MoBr_4$)
Molybdenum tetrabromide
[13520-59-7]

$MoBr_4$

M 415.5
Isomorphous with $MoCl_4$, containing $MoBr_6$ octahedra. Synth. by the bromination of $MoBr_3$ or $Mo(CO)_6$. Additive for special radiation-resistant lubricants. Black needles. V. sol. H_2O. Easily oxidised and hydrolysed. Disproportionates on heating to $MoBr_3$ and Br_2.

Inorg. Synth., 1967, **10**, 49 (*synth*)

$Br_4MoN^{\ominus}$

Tetrabromonitridomolybdate(*VI*)(1−), 10Cl
Tetrabromonitridomolybdate(VI)(*1−*)

$[N{\equiv}MoBr_4]^{\ominus}$

M 429.5 (ion)
Square pyramidal with apical N, Mo—N 163 pm, compatible with triple bond, BrMoN angle 103°. Synth. from $MoNBr_3$ + PPh_4Br in CH_2Br_2 soln.

Ph_4P salt: [76565-24-7].
Hygroscopic brown cryst.

Dehnicke, K. *et al*, *Z. Kristallogr.*, 1980, **153**, 181 (*cryst struct, synth, ir*)

IC-002040

Br_4MoO

Molybdenum(*VI*) bromide oxide ($MoBr_4O$), 9Cl
Molybdenum(VI) *oxytetrabromide*
[21846-56-0]

$MoOBr_4$

M 431.5
Generated using a fused mixt. of an alkali metal bromide with MoO_3 at >250°. Dark brown sublimate.

Ward, B.G. *et al*, *Inorg. Chem.*, 1968, **7**, 2569 (*synth, ir*)

IC-002041

$Br_4NOTc^{\ominus}$

Tetrabromonitrosyltechnetate(1−)

$[TcBr_4(NO)]^{\ominus}$

M 448.5 (ion)
Square pyramidal with axial NO. Formally and operationally Tc(*II*); esr consistent with low-spin d^5 config. Synth. from reaction of $TcO_2{\cdot}xH_2O$ with NO in 4*M* HBr. Starting material for prep. of complexes with $TcNO^{3\oplus}$ core; reacts with $NCS^{\ominus}$ to give $[Tc(NO)(NCS)_5]^{2\ominus}$ and $[Tc(NO)(NCS)_6]^{3\ominus}$.

Tetrabutylammonium salt: [90386-75-7].
Red cryst. Sol. Me_2CO. Paramagnetic (low-spin d^5); molar conductivity in MeCN is that of a 1:1 salt.

Orvig, C. *et al*, *J. Labelled Compd. Radiopharm.*, 1981, **18**, 148 (*synth, ir, conductivity*)

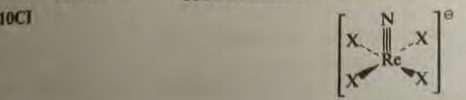
IC-002043

$Br_4NRe^{\ominus}$

Tetrabromonitridorhenate(*VI*)(1−)



X = Br

M 519.8 (ion)
Distorted sq. pyramid. Interatomic distances: Re≡N 162.0, Re—Br 247.7 pm. Ir $\nu_{Re{\equiv}N}$ 1099 cm^{-1}. For BBr_3 adduct, see (Boron tribromide) tetrabromonitridorhenate(*VI*)(1−), IC-000784.

Ph_4As salt: [83533-88-4].
Synth. from $AsPh_4[ReNCl_4]$ and BBr_3, followed by thermal cleavage of the resulting $AsPh_4[Br_4ReN(BBr_3)]$. Red-orange cryst. (CH_2Br_2).

Kaßitz, W. *et al*, *Z. Anorg. Allg. Chem.*, 1982, **490**, 175 (*synth, ir, cryst struct*)

$Br_4NRu^{\ominus}$

IC-002044

Tetrabromonitridoruthenate(*VI*)(1−), 9Cl
[53149-54-5]

$[N{\equiv}RuBr_4]^{\ominus}$ (C_{4v})

M 434.6 (ion)
Prepd. by treating $[RuO_3Br_4]^{2\ominus}$ with $Na[N_3]$ in aq. HBr. Sol. MeCN, aq. HBr. Along with $[RuNCl_4]^{\ominus}$, $[RuNBr_4]^{\ominus}$ shows the largest quadrupole splittings yet obsd. for ^{99}Ru: the *six* component lines are almost resolved.

Tetrabutylammonium salt: Brown cryst.; diamagnetic.
Ph_4As salt: [42718-63-8].
Pink cryst.; diamagnetic. Ru≡N 158, Ru—Br 245.3 pm; angle: NRuBr 104.25°. Ir $\nu_{Ru{\equiv}N}$ 1088; ν_{Ru-Br} 304 cm^{-1}.

IC-002045

$Br_4NTc^{\ominus}$

Tetrabromonitridotechnetate(*VI*)(1−)
[105059-13-0]

$[N{\equiv}TcBr_4]^{\ominus}$

M 432.5 (ion)
Square pyramidal with axial N≡Tc. Synth. by N_2H_4 reduction of $TcO_4^{\ominus}/Br^{\ominus}$; by $N_3^{\ominus}$ reduction of $TcO_4^{\ominus}$ in conc. HBr; or from $TcNCl_4^{\ominus}$ + LiBr in Me_2CO. Starting material for synth. of complexes with $[Tc^{VI}{\equiv}N]^{3\oplus}$ core. Air-stable.

Tetrabutylammonium salt: [95012-29-6].
Brilliant blue cryst. (MeCN). Mp 202-203°.
Ph_4As salt: [95012-28-5].
Intense blue-black cryst. (MeCN). Sol. CH_2Cl_2. Mp 293-295° dec.

IC-002046

$Br_4N_2O_2Re^{\ominus}$

Tetrabromodinitrosylrhenate(1−), 11Cl

$[Re(NO)_2Br_4]^{\ominus}$

M 565.8 (ion)
Octahedral.

cis-form
Re—Br 251-254, Re—N 180, 184 pm.

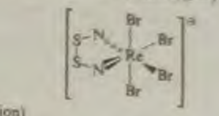
Ph_4P salt: Synth. from $PPh_4[Re(NO)_2Cl_4]$ and BBr_3. Dark red-brown powder.
Ph_4P salt, $2CCl_4$ solvate: [84151-08-6].
Dark red-brown cryst.

Mronga, V.N. *et al*, *Z. Anorg. Allg. Chem.*, 1982, **491**, 237 (*synth, ir, cryst struct, props*)

IC-002047

$Br_4N_2ReS_2^{\ominus}$

Tetrabromo(disulfur diamidato(4−)-*N,N'*)rhenate(1−), 11Cl
Tetrabromo(disulfur dinitrido)rhenate(1−)



M 597.9 (ion)
Ph_4P salt: [105034-14-8].
Synth. from $PPh_4[ReCl_4(NSCl)_2]$ and $BrSiMe_3$. Black cryst. (CH_2Br_2).

Conradi, E. *et al*, *Z. Anorg. Allg. Chem.*, 1988, **559**, 39 (*synth, ir, cryst struct, props*)

IC-002048

Br_4Nb

Niobium bromide ($NbBr_4$), 11Cl
Niobium tetrabromide
[13842-75-6]

$NbBr_4$

M 412.5
Struct. not known. Synth. by reduction of $NbBr_5$ with Nb in a temp. gradient of 410-350° or by heating $NbBr_3$ and $NbBr_5$ in a sealed tube. Dark brown solid, readily oxidised in air. Disprop. to $NbBr_3$ + $NbBr_5$. Diamagnetic.

IC-002049

$Br_4Ni^{2\ominus}$

Tetrabromonickelate(*II*)(2−), 9Cl, 8Cl
[15954-87-7]

$[NiBr_4]^{2\ominus}$

M 378.3 (ion)
Tetrahedral struct. Many salts known, most stable being those with large cations. Paramagnetic.

Bis-Et_4N salt: [1185-60-0].
Blue deliquescent needles. Sol. MeCN, $MeNO_2$.
Bis-tetrabutylammonium salt: [7270-22-6].
Blue solid.

[35063-90-2]

Br_4Np

Neptunium(*IV*) bromide ($NpBr_4$)
Neptunium tetrabromide
[15608-32-9]

$NpBr_4$

M 556.6
Isostructural with UBr_4 with 8-coord. Np. Synth. from Np + Br_2 (*in vacuo* at 425°) or from NpO_2 + $AlBr_3$ (350°). Moisture-sensitive red-brown solid. Sol. Me_2CO, $MeNO_2$, EtOH. Mp 464°. Bp 400° *in vacuo*.

Fried, S. *et al*, *J. Am. Chem. Soc.*, 1948, **20**, 3539 (*synth*)
U.S. Pat., 2 578 410, (1952); *CA*, **46**, 3716 (*synth*)

$Br_4ORe^{\ominus}$ IC-002051

Tetrabromorhenate(*V*)(1 –)
Oxotetrabromorhenate(V)(*1* –)

$[O{=}ReBr_4]^{\ominus}$ (C_{4v})

M 521.8 (ion)
Probably square pyramidal with apical oxygen. Salts hydrol. instantly in H_2O and slowly in moist air. Ion readily adds neutral ligands eg. MeCN, Ph_3P and Py.

Cs salt:
Br_4CsORe M 654.7
Synth. analogously to Ph_4As salt. Red-orange platelets (conc. HBr); dried at 80° *in vacuo*. Sl. sol. 48% HBr.
Et_4N salt: Synth. from $KReO_4$ by treatment with Zn in conc. H_2SO_4, followed by 48% HBr aq. and Et_4NBr. Red cryst. + H_2O (Me_2CO). Sol. Me_2CO, MeCN. Insol. hydrocarbons, alcohols, ethers and $CHCl_3$.
Ph_4As salt: [14853-12-4].
Synth. from $KReO_4$ by treatment with Zn in conc. H_2SO_4/MeOH, followed by 48% HBr and Ph_4AsBr. Coral-red cryst. (MeCN); dried at 80° *in vacuo*. Sol. Me_2CO, alcohols, MeCN, $CHCl_3$, THF. Insol. hydrocarbons, Et_2O and 48% HBr.

Cotton, F.A. *et al*, *Inorg. Chem.*, 1966, **5**, 9 (*synth, ir, uv, struct, props*)

$Br_4OTa^{\ominus}$ IC-002053

Tetrabromooxotantalate(*V*)(1 –), 11Cl

$[TaOBr_4]^{\ominus}$

M 516.5 (ion)
Nitrosyl salt: [87808-69-3].
Br_4NO_2Ta M 546.5
Synth. from NO[$TaOCl_4$] and BBr_3 at r.t. Red solid.

Dehnicke, K. *et al*, *Chem.-Ztg.*, 1983, **107**, 247 (*synth*)

$Br_4OTc^{\ominus}$ IC-002054

Tetrabromooxotechnetate(*V*)(1 –)
[73953-02-3]

$[O{=}TcBr_4]^{\ominus}$ (C_{4v})

M 434.5 (ion)
Synth. by reaction of $KTcO_4$ with 48% HBr at r.t. Valuable synthetic starting material for complexes with $TcO^{3\oplus}$ core. Water-sensitive (gives TcO_2 aq. + $TcO_4^{\ominus}$); also reacts with other donor solvs. May crystallise in the hydrated form $[TcOBr_4(OH_2)]^{\ominus}$ e.g. in $Et_4N^{\oplus}$ salt.
Tetrabutylammonium salt: [73953-03-4].
Green-yellow plates (CH_2Cl_2/hexane). Sol. CH_2Cl_2, MeCN, Me_2CO.

[92622-23-6]

Tetrabromooxovanadate(*V*)(1 –), 11Cl
Oxotetrabromovanadate(V)(*1* –)

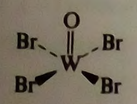
$[O{=}VBr_4]^{\ominus}$ (C_{4v})

M 386.5 (ion)
Square pyramidal. Interatomic distance: V–O 155 pm.
Ph_4P salt: [83343-82-2].
Synth. from Ph_4PBr and $VOBr_3$ in CH_2Br_2. Dark violet solid.

Müller, U. *et al*, *Z. Naturforsch., B*, 1982, **37**, 699 (*synth, cryst struct, ir*)

Br_4OW IC-002056

Tungsten(*VI*) bromide oxide (WBr_4O)
Tungsten tetrabromide oxide. Tetrabromooxotungsten(VI)
[13520-77-9]



M 519.4
Square pyramidal struct. Synth. e.g. from WO_3 + CBr_4; WO_3-carbon mixt. + Br_2; WO_2—W mixt. with Br_2; WBr_6 + SO_2(l), WBr_6 + WO_3 at 100-150°; WO_3 + BBr_3. V. hygroscopic. dark purple-black or dark brown needles, or black lustrous solid. Rapidly dec. in air or H_2O. Sol. dioxan (→ yellow soln.), Me_2CO (→ green soln.); sol. RCN, R_2O, R_2S. Mp 277° (273-276°). $Subl._{0.5}$ 168-172°, Bp 327° (322°).

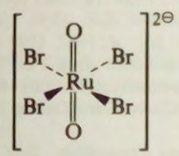
$Br_4O_2Ru^{2\ominus}$ IC-002058

Tetrabromodioxoruthenate(*VI*)(2 –)



M 452.6 (ion)
trans-Octahedral anion.
Di-Cs salt: [31453-70-0].
Prepd. by treating a soln. of RuO_4 in CCl_4 with a soln. of CsBr in aq. HBr at 0°. Brown crystalline diamagnetic salt. Ir ν_{RuO_2} 825, 821 cm^{-1}.
[40580-97-0]

Griffith, W.P. *et al*, *J. Chem. Soc., Dalton Trans.*, 1973, 1315 (*synth, ir*)

$Br_4O_2U^{2\ominus}$ IC-002059

Tetrabromodioxouranate(*VI*)(2 –)
[18701-97-8]

$[UO_2Br_4]^{2\ominus}$

M 589.6 (ion)
trans-Octahedral anion.
Di-K salt: [64175-10-6].
$Br_4K_2O_2U$ M 667.8
Orange cryst. Sol. H_2O, HBr (aq.).
Di-Rb salt: [89189-90-2].
$Br_4O_2Rb_2U$ M 760.5
Orange cryst. + H_2O.
Di-Cs salt: [18324-47-5].
$Br_4Cs_2O_2U$ M 855.4
Pale orange hygroscopic prisms. Ir ν_{U-O} 925, 917 cm^{-1} (mull); raman ν_{U-O} 834 cm^{-1}.
Di-NH_4 salt: [65484-90-4].
$Br_4H_8N_2O_2U$ M 625.7
Orange cryst. + $2H_2O$. Sol. $MeNO_2$.
Bis-Me_4N salt: [52441-82-4].
Cryst. Raman ν_{U-O} 869 (soln); 832 cm^{-1} (solid).
Bis-tetrapropylammonium salt: [53140-36-6].
Brown cryst.
Bis-tetrabutylammonium salt: [65209-35-0].
Brown cryst.
Bis-Ph_4P complex: [57902-98-4].
Yellow cryst. + $2CH_2Cl_2$.
Bis(4,6-dimethyl-3-thioxo-3H-1,2-dithiolo[4,5-c]pyridinium) salt: [102539-11-7].
$C_{16}H_{10}Br_4N_2O_2S_6U$ M 1012.3
Orange-brown cryst. (plates). Sol. MeCN.

Br_4Os IC-002060

Osmium(*IV*) bromide ($OsBr_4$)
Osmium tetrabromide
[59201-52-4]

$OsBr_4$

M 509.8
It is not known whether Form I and Form II are identical. Osmium octahedrally coord. Form I synth. by reaction of the elements at 20 atm. of bromine at 450-470°; Form II by reaction of HBr and EtOH on OsO_4 under reflux followed by intensive drying. Black cryst. (Form I); black solid (Form II). Insol. in H_2O, mineral acids. Mp 350° dec. Dec. at 350° to $OsBr_3$ and Br_2.

$Br_4P^{\oplus}$ IC-002061

Tetrabromophosphonium
Tetrabromophosphorus(1+), 9Cl
[15099-42-0]

$[PBr_4]^{\oplus}$ (T_d)

M 350.5 (ion)
Chloride: [39118-22-4]. *Tetrabromophosphonium chloride*
Br_4ClP M 386.0
Yellow powder. Orthorhombic.
Bromide: see *Phosphorus bromide (PBr_5)*, IC-002118
Tribromide: see *Tetrabromophosphonium tribromide*, IC-002205
Tetrabromoborate: [51826-56-3].

BBr_4P M 681.0
Synth. from PBr_5 + BBr_3 in EtBr. Yellow solid. Tetrahedral anion.
Dibromoiodate: [17978-65-3].
Br_4IP M 637.3
Wine red cryst.
Hexafluorophosphate. [12514-48-6].
Tetrabromiphosphonium hexafluorophosphate
$Br_4F_6P_2$ M 495.5
White, unstable, cryst. powder. Dec. in soln. in non-polar solvs. → PBr_3, Br_2PF_3. Subl. 135° dec.
Trichloride: [118968-32-4].
Br_4Cl_3P M 456.9
Synth. from PCl_3 + Br_2 or PCl_3 + PBr_3. Orange cryst. (CCl_4). Non-conductor in solid state or in soln. in C_6H_6, CCl_4 or CS_2. Conductor when molten, or in soln. in $PhNO_2$ or MeCN.

IC-002063

Br_4Pa
Protactinium(*IV*) bromide ($PaBr_4$)
Protactinium tetrabromide
[13867-42-0]

$PaBr_4$

M 550.6
Possesses the UCl_4 struct. with 8-coord. Pa. Synth. from $PaBr_5$ + H_2 or Al at 400°. Orange-red solid. Sol. MeCN, EtOH, Me_2CO.

Brown, D. *et al, J. Chem. Soc. A*, 1967, **719**; 1971, 908 (*synth, cryst struct*)

IC-002064

$Br_4Pd^{2\ominus}$
Tetrabromopalladate(*II*)(2−)
[14127-70-9]

$[PdBr_4]^{2\ominus}$ (D_{4h})

M 426.0 (ion)
Dark red-brown ion.
Di-K salt: [13826-93-2]. *Potassium tetrabromopalladate* (K_2PdBr_4)
Br_4K_2Pd M 504.2
Dark red cryst. (HBr). Sol. H_2O. Isomorphous with K_2PtCl_4.
▷ RT3358000.
Di-Rb salt: [15654-53-2].
Br_4PdRb_2 M 596.9
Brown solid.
Di-Cs salt: [15654-54-3].
Br_4Cs_2Pd M 691.8
Brown solid.
Tetraamminepalladium(2+) salt: [15278-85-0].
$Br_4H_{12}N_4Pd_2$ M 600.5
Dichroic red-brown solid. Magnus-type struct.; Isom. to $Pd(NH_3)_2Br_2$ on heating to 190°.
Bis-Et_4N salt: [70468-65-4].
Exhibits antitumour activity in mice. Red cryst. Sol. MeCN, Ac_2O, $PhNO_2$, $MeNO_2$, MeOH, Me_2CO.
Bis-tetrabutylammonium salt: [54189-55-8].
Formed on fusion of $[Pd_2Br_6]^{2\ominus}$ with excess $[Bu_4N]Br$. Brown solid.

IC-002066

$Br_4Pt^{2\ominus}$
Tetrabromoplatinate(*II*)(2−), 8CI
[14493-01-7]

$[PtBr_4]^{2\ominus}$

M 514.6 (ion)

Probable square planar struct. Many other salts with organic or complex cations known. Many studies of reaction mechanisms. Synth. from Tetrachloroplatinate(*II*)(2−), IC-017117 + $Br^{\ominus}$ or Hexabromoplatinate(*IV*)(2−), IC-002173 + N_2H_4. Useful starting material.
Di-Na salt: [21246-31-1]. *Sodium tetrabromoplatinate*(II) (Na_2PtBr_4)
Br_4Na_2Pt M 560.6
Probably brown solid. Probably sol. H_2O.
Di-K salt: [13826-94-3]. *Potassium tetrabromoplatinate*(II) (K_2PtBr_4)
Br_4K_2Pt M 592.8
Commercially available. Brown solid. Sol. H_2O. The dihydrate is probably identical.
▷ TP1830000.

IC-002067

Br_4Pt
Platinum(*IV*) bromide ($PtBr_4$), 9CI
Platinum tetrabromide
[68938-92-1]

$PtBr_4$

M 514.6
Struct. not determined, prob. contains polymeric chains of $PtBr_6$ units. Synth. from Platinum, IC-021805 + HBr (aq.) + Br_2. Dark red solid. Sol. EtOH, Et_2O; sl. sol. H_2O. Dec. at 180°.

Sidgwick, N.V., *The Chemical Elements and their Compds.*, Oxford, 1950, 1615.
Brauer, G., *Handbuch Präp. Anorg. Chem.*, 3rd Ed., Ferdinand Enke Verlag, 1975-1981, **3**, 1713 (*synth*)

IC-002068

Br_4Re
Rhenium(*IV*) bromide ($ReBr_4$), 9CI
Rhenium tetrabromide
[36753-03-4]

$ReBr_4$

M 505.8
Believed to be isostructural with γ-$ReCl_4$. Synth. from $ReCl_5$ and BBr_3. Black powder.

Colton, R. *et al, Chem. Ind. (London)*, 1959, 1314.
Müller, H. *et al, Inorg. Nucl. Chem. Lett.*, 1972, **8**, 413 (*synth, struct*)

IC-002069

Br_4Ru
Ruthenium(*IV*) bromide ($RuBr_4$)

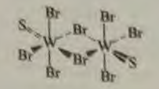
$RuBr_4$

M 420.6
Unknown at present.

Seddon, E.A. *et al, The Chemistry of Ruthenium*, Elsevier, Amsterdam, 1984, 92.

IC-002070

Br_4SW
Tungsten(*VI*) bromide sulfide ($WSBr_4$)
[27388-80-3]



dimer

M 535.5
Square pyramidal units weakly associated to give dimer in solid state. Monomeric in gas phase. Synth. from Sb_2S_3 and WBr_6 at 140°.
Dimer: Di-μ-bromohexabromodithioxoditungsten(VI)
$Br_4S_2W_2$ M 1071.0
V. air-sensitive dark green cryst. Subl. *in vacuo*. Ir *v* 555, 395, 346, 250 cm^{-1}.

Drew, M.G.B. *et al, J. Chem. Soc. A*, 1970, 2815 (*struct*)

$Br_4Tc^{2\ominus}$ IC-002077

Tetrabromotechnetate(*II*)(2−)

$[TcBr_4]^{2\ominus}$ (T_d)

M 418.5 (ion)
cis-Bis(2,2'-bipyridine-N,N')bromonitridotechnetium(V)(1+) salt: [121827-71-2].
$C_{40}H_{32}Br_4N_{10}Tc_2$ M 1428.9
Synth. by reaction of $[TcNBr_4]^{\ominus}$ with bipy in EtOH. Deep red solid + 0.5 MeOH (MeOH). Octahedral cation.

Archer, C.M. *et al, J. Chem. Soc., Chem. Commun.*, 1989, 375 (*cryst struct*)
Archer, C.M. *et al, Polyhedron*, 1989, **8**, 1879 (*synth*)

Br_4Tc IC-002078

Technetium(*IV*) bromide ($TcBr_4$)

Technetium tetrabromide. Tetrabromotechnetium(IV)

[74078-05-0]

$TcBr_4$

M 418.5
Synth. by successive evapn. of $HTcO_4$ in 40% HBr to dryness. Unstable red-brown solid; moisture-sensitive. Sol. Me_2CO.

Fergusson, J.E. *et al, Aust. J. Chem.*, 1970, **23**, 453 (*synth*)

Br_4Te IC-002079

Tellurium(*IV*) bromide ($TeBr_4$)

Tellurium tetrabromide

[10031-27-3]

$[TeBr_3]^{\oplus}Br^{\ominus}$ (solid state struct.)

M 447.2
Synth. from Te + Br_2. Yellow solid. Hygroscopic and readily hydrol. Dissociates as vap. to Br_2 + $TeBr_2$. Sol. $CHCl_3$, Et_2O, insol. CCl_4. Mp 363° (in Br_2 vap.). Bp 414-427°.

Schoemaker, C.B., *Acta Crystallogr.*, 1965, **18**, 296 (*cryst struct*)
Brauer, G., *Handbuch Präp. Anorg. Chem.*, 3rd Ed., Ferdinand Enke Verlag, 1975-1981, **1**, 434 (*synth*)

Br_4Th IC-002080

Thorium(*IV*) bromide ($ThBr_4$)

Thorium tetrabromide

[13453-49-1]

$ThBr_4$

M 551.6
Exists in α- and β-forms. Synth. from e.g. Th + Br_2 or Br_2 + ThO_2/C. Forms complexes with a range of donor ligands. Forms hydrates $ThBr_4.nH_2O$ (n = 7, 8, 10, 12). Hygroscopic white solid. Sol. H_2O. Mp 679° (610°). Bp 857° (725°). Can be sublimed *in vacuo* >600°.

α-form

Possesses the α-$TiCl_4$ struct. Dodecahedral about Ti.

β-form

Possesses the UCl_4 struct. Dodecahedral about Th.

Br_4Ti IC-002081

Titanium bromide ($TiBr_4$), 11Cl

Titanium tetrabromide

[7789-68-6]

$TiBr_4$

M 367.4
Tetrahedral in vapour phase and in the solid state (SnI_4 struct.). Ir of liq. also indicates a tetrahedral struct. Best synth. from Ti + Br_2 in a flow system at 300-600°. TiO_2 and C can be brominated at 600° or $TiCl_4$ caused to react with BBr_3. Ti also reacts with molten $PbBr_2$. Has been used extensively in catalysts, esp. for olefin polym. Amber yellow, readily hydrol. solid. There is a phase change at −15°. Sol. $CHCl_3$, CCl_4, Et_2O, EtOH. Mp 39°. Bp 230-238°. $\Delta H_f°$ −618 kJ mol^{-1}.

$Br_4Tl^{3\ominus}$ IC-002082

Tetrabromothallate(*I*)(3−)

$[TlBr_4]^{3\ominus}$

M 523.9 (ion)
Synth. from TlBr and corresp. bromide salt of supporting cation in soln. Luminescent.

▷ V. toxic.

Scott, A.B. *et al, Inorg. Chem.*, 1962, **1**, 313 (*dissoc const*)

$Br_4Tl^{\ominus}$ IC-002083

Tetrabromothallate(*III*)(1−)

[15905-99-4]

$[TlBr_4]^{\ominus}$ (T_d)

M 523.9 (ion)
$TlBr_4^{\ominus}$ are arranged to form tunnels in which alkali metal ions and H_2O molecules located (c.f. zeolites). Obt. by slow evap. of aq. $TlBr_3$ and excess alkali metal bromide; or reaction of R_4NBr or R_4AsBr with $TlBr_3$ in non-aq. soln.

▷ Toxic.

K salt: [61129-43-9].

Br_4K_2Tl M 563.0
Synth. from $TlBr_3$ and KBr in aq. soln. Yellow cryst. + $2H_2O$.

[15698-65-7, 15698-88-5, 86593-30-8]

Br_4Tl_2 IC-002084

Thallium(*I*) tetrabromothallate(*III*)

Thallium bromide (Tl_2Br_4). Thallium dibromide (mixed-)

[13453-28-6]

$Tl[TlBr_4]$

M 728.3
Synth. from TlBr + Br_2 in EtOH. Light beige orthorhombic cryst. Sol. HCl, sol. with dec. in oxidising acids, hydroxides; insol. H_2O, org. solvs. Forms solid solns. with Thallium(*I*) tetrachlorothallate(*III*), IC-017141 including compd. of composition TlClBr whose struct. resembles NiAs.

▷ Highly toxic.

Br_4U IC-002085

Uranium(*IV*) bromide (UBr_4)

Uranium tetrabromide

[13470-20-7]

UBr_4

M 557.6
Possesses layer struct. with pentagonal bipyramidal U. Synth. from U + Br_2/He at 650°, or from UO_3 + CBr_4 at 165°. V. air and moisture-sensitive brown monoclinic cryst. Sol. Me_2CO, EtOH. Mp 519° (516°). Bp 791° (761°). Reacts with O_2 → Uranium bromide oxide (UBr_2O_2). IC-001867 at 150°. With H_2 forms UBr_3 at 470°. Paramagnetic, μ_{eff} = 3.12μ_B (72-569K). Ir ν_{U-Br} 233 cm^{-1} (vapour).

$Br_4V^{\ominus}$ IC-002086

Tetrabromovanadate(*III*)(1−), 8Cl

[15051-00-0]

$[VBr_4]^{\ominus}$

M 370.5 (ion)
May be tetrahedral based on uv-vis spectra but the low magnetic moment suggests an octahedral polymer.

Et_4N salt: [15636-55-2].

Synth. by adding $[Et_4N]Br$ to VBr_3 in MeCN and heating the product to remove MeCN. Brown-green solid. Paramagnetic, $\mu_{eff} = 2.41\mu_B$ (indep. of temp.).

Clark, R.J.H. *et al*, *J. Chem. Soc. A*, 1966, 1296 (*synth, ir, uv-vis*)

IC-002087

Br_4V^-

Vanadium(*IV*) bromide (VBr_4), 11Cl

Vanadium tetrabromide

[13595-30-7]

VBr_4 (T_d)

M 370.5
Tetrahedral in vapour according to electron diffraction data. Synth. by reaction of $VBr_3 + Br_2$ at 325°. Catalyst for graft copolymers. Purple solid, unstable above −23° slowly forming $VBr_3 + Br_2$.

McCarley, R.E. *et al*, *Inorg. Chem.*, 1964, **3**, 54 (*synth*)

Br_4Zr IC-002090

Zirconium bromide ($ZrBr_4$), 11Cl

Zirconium tetrabromide

[13777-25-8]

$ZrBr_4$

M 410.8
Tetrahedral in the gas phase but octahedral zig-zag chains in the solid state. Synth. by bromination of ZrO_2 + C at 560°, or by reaction of $ZrCl_4$ with BBr_3. Used as an absorber in artificial kidneys. Commercially available. Mp 450°. Subl. 250°. ΔH_f −760 kJ mol^{-1}.

Ammoniate: [97549-60-5].
Diamminetetrabromozirconium(IV).
Hexaamminetetrabromozirconium(IV)

At −30°, $ZrBr_4$ forms three adducts in liq. NH_3. At 20°, $ZrBr_4(NH_3)_6$ is stable but $ZrBr_4(NH_3)_2$ is stable at 200°. Four compositions known, $ZrBr_4(NH_3)_n$ where n = 2, 6, 12 or 17.

Br_2H_2Sb IC-002103

Dihydrogen pentabromoantimonate(*III*)(2−), 8CI
Pentabromoantimonic(III) acid

$H_2[SbBr_5]$

M 523.2
Salts prep. from Sb_2O_3 or $SbBr_3$ in HBr aq., + amine, HBr.
Bis-Me_2NH salt: [54205-68-4].
Yellow cryst. Mp 258-260°.
Bis-$EtNH_3$ salt: Yellow solid. Mp 249-250°.
Bis(2-chloropyridine) salt: [60362-47-2].
Orange cryst. Mp 121-130°. Struct. contains discrete $SbBr_5^{\ominus}$ anions (with tetragonal pyramidal geometry).
Bis-piperidine salt: Pale yellow solid. Stable in air. Insol. non-polar solvs. Mp 283° dec. Polymeric anion with zig-zag chains of $SbBr_6$ units.
Bis-aniline salt: [59450-19-0].
Yellow solid. Mp 180-181°.
Bis-benzylamine salt: [54331-35-0].
Yellow solid. Mp 170°.
Di-NH_3 salt: see *Diammonium pentafluoroantimonate(III) (2−), IC-018496*

$Br_5NOOs^{2\ominus}$ IC-002106

Pentabromonitrosylosmate(2−)
[55031-52-2]

$[OsBr_5NO]^{2\ominus}$

M 619.7 (ion)
Synth. by heating $Na_2[OsNO(NO_2)_4OH]$ in HBr with subsequent treatment with MBr (M = NH_4, K, Rb, Cs, R_4N).
Di-K salt: [39554-00-2].
Opaque red-brown cryst.
Di-Rb salt: Brown-red powder. Spar. sol. H_2O. Dec. at 440°.
Di-NH_4 salt: [39609-01-3].
Brownish red cryst. (HBr). Dec. at 400°.

$Br_5NORe^{2\ominus}$ IC-002107

Pentabromonitrosylrhenate(2−), 9CI
[44627-93-2]

$[Re(NO)Br_5]^{2\ominus}$

M 615.7 (ion)
Ir ν_{NO} 1715 cm^{-1}.
Di-Cs salt: [31332-83-9].
Synth. from Ag_2ReBr_6 and NO at 300° followed by EtOH extraction and treatment with HBr conc. and CsBr. Brown cryst.
Bis-Et_4N salt: [37549-21-6].

Synth. (i) from $Re(OEt)(PPh_3)_2Br_2$, NO and Me_4NBr in EtOH, (ii) from K_2ReBr_6, Et_4NBr, HBr and NO in EtOH. Pale green cryst. (EtOH). Mp 250° dec.

$Br_5NTc^{2\ominus}$ IC-002110

Pentabromonitridotechnetate(*VI*)(2−)

$[N{\equiv}TcBr_5]^{2\ominus}$ (C_{4v})

M 512.4 (ion)
Octahedral anion. Synth. from $TcO_4^{\ominus}$, $N_3^{\ominus}$, and conc. HBr. Dissociates completely to $[TcNBr_4]^{\ominus}$ + $Br^{\ominus}$ on dissolution.
Di-Cs salt: [110303-55-4].
Br_5Cs_2NTc M 778.2
Blue-black solid. Mp > 360°.

Baldas, J. *et al*, *J. Chem. Soc., Dalton Trans.*, 1987, 1721 (*synth, ir, reactions*)

$Br_5N_3ReS_2^{2\ominus}$ IC-002111

Tetrabromo(monothiazyl monobromide-*N*)(thionitrosyl)rhenate(2−), 11CI

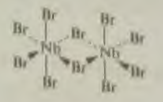
$[ReBr_4(NS)(NSBr)]^{2\ominus}$

M 677.8 (ion)
cis-form
Bis-Ph_4P salt: [105034-11-5].
Synth. from $ReBr_4(N_2S_2)^{\ominus}$ and PPh_4Br in CH_2Br_2. Red, needle-like cryst. +CH_2Br_2 (CH_2Br_2/hexane)

Hauck, H.G. *et al*, *Z. Anorg. Allg. Chem.*, 1986, **534**, 77.
Hauck, H.G. *et al*, *Z. Naturforsch., B*, 1986, **41**, 825 (*synth, ir, cryst struct*)

Br_5Nb IC-002112

Niobium(*V*) bromide ($NbBr_5$), 11CI
Niobium pentabromide
[13478-45-0]



dimer

M 492.4
Bioctahedral dimer in solid state, tbp monomer in gas phase. Synth. from Nb or Nb_2O_5 and Br_2 or from $NbCl_5$ and BBr_3. Yellow-red volatile solid. Mp 254-268°. Bp 365°. Readily hydrol. Forms solid solns. with $NbCl_5$.
Dimer: Di-μ-bromooctabromadiniobium(V)
$Br_{10}Nb_2$ M 984.8

IC-002119

Br_5Pa

Protactinium(*V*) bromide ($PaBr_5$)

Protactinium pentabromide

[15608-38-5]

$PaBr_5$

M 630.5
Synth. from PaC + Br_2 (350°); or from Pa_2O_5 + C + Br_2 (600-700°). V. moisture-sensitive red or orange-brown cryst. Sol. MeCN. Subl. 300° *in vacuo*, Bp 428° (extrap.).

α-form

β-form

Possesses the α-UCl_5 struct. with six-coordinate Pa.

γ-form

Isostructural with β-UCl_5.

Br_5Sb

Antimony(*V*) bromide ($SbBr_5$), 9CI, 8CI

Pentabromoantimony(V). *Antimony pentabromide*

[29702-86-1]

$SbBr_5$

M 521.2
Evidently unknown in the free state. An etherate has been reported, and complexes derived from $SbBr_5$ are also known.

Et_2O complex: Pentabromo(diethyl ether)antimony
$C_4H_{10}Br_5OSb$ M 595.3
Solid. Loses Et_2O and Br_2 at sl. above r.t.

Holmes, R.R., *J. Inorg. Nucl. Chem.*, 1961, **19**, 363 (*attempted synth*)
Adams, C.J. *et al*, *J. Inorg. Nucl. Chem.*, 1972, **34**, 1829 (*complexes*)

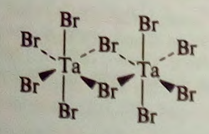
IC-002123

Br_5Ta

Tantalum(*V*) bromide ($TaBr_5$), 11CI

Tantalum pentabromide

[13451-11-1]



dimer

M 580.4
Bioctahedral dimer in solid state, tbp monomer in gas phase. Synth. from Ta, Ta_2O_5 or $TaCl_5$ and various brominating agents. Volatile yellow-red solid. Mp 256-280°. Bp 344-348°. Readily hydrol.
Dimer: Di-μ-bromooctabromoditantalum(V)

$Br_{10}Ta_2$ M 1160.9

$Br_5Tl^{2\ominus}$

Pentabromothallate(*III*)(2−)

$[TlBr_5]^{2\ominus}$

M 603.9 (ion)
Solid does not contain discrete $[TlBr_5]^{2\ominus}$ units.
▷ Toxic.
Di-Cs salt:
Br_5Cs_2Tl M 869.7
Synth. from aq. $TlBr_3$/CsBr mixt. Cryst; dec. to $Cs_3Tl_2Br_9$/CsBr at 260°. Struct. related to Scheelite with both tetrahedral $[TlBr_4]^{\ominus}$ and octahedral $[TlBr_6]^{3\ominus}$ units.

Zimmermann, K. *et al*, *Z. Anorg. Allg. Chem.*, 1987, **553**, 280.

IC-002125

$Br_5U^{2\ominus}$

Pentabromouranate(*III*)(2−)

$UBr_5^{2\ominus}$

M 637.5 (ion)
Di-K salt: [53513-84-1].
Br_5K_2U M 715.7
Dark violet solid. Mp 580°. 6-Coord., isotypic with Cs_2DyCl_5. Ir ν_{U-Br} 145, 124, 110 cm^{-1}.
Di-Rb salt: [53513-86-3].
Br_5Rb_2U M 808.4
Dark violet solid. Mp 532° dec. 6-Coord., isotypic with Cs_2DyCl_5. Ir ν_{U-Br} 144, 124, 111 cm^{-1}.
Di-Cs salt: [53513-88-5].
Br_5Cs_2U M 903.3
Dark violet solid. Mp 420° dec. 6-Coord., isotypic with Cs_2DyCl_5. Ir ν_{U-Br} 140, 124, 110 cm^{-1}.

IC-002127

Br_5W
Tungsten bromide (WBr_6)
Tungsten pentabromide
[13470-11-6]

WBr_5

M 583.3
Prepd. from W + Br_2 at 650°. Hygroscopic dark-brown needles. Hydrol. by water. Mp 276°. Bp 333°.

Mellor Compr. Treat. Inorg. Theor. Chem., Longman, London, 1931, **11**, 853.
Brown, T.M. *et al*, *Inorg. Chem.*, 1967, **6**, 1335 (*synth*)

IC-002128

$Br_5Zn^{3\ominus}$
Pentabromozincate(3−)
$[ZnBr_5]^{3\ominus}$

M 464.9 (ion)
Salts probably all contain anions $[ZnBr_4]^{2\ominus}$ and $Br^{\ominus}$.
Tri-Rb salt: [38257-07-7].
Br_5Rb_3Zn M 721.3
Air-stable white cryst. Compd. consists of $Rb^{\oplus}$, $Br^{\ominus}$ and $[ZnBr_4]^{2\ominus}$ ions. Isomorphouswith $(NH_4)_3ZnCl_5$.
Cs salt: [59273-13-1].
Br_5Cs_3Zn M 863.6
Cryst.
Tri-NH_4 salt: [38257-08-8].
Cryst.
[59273-13-1]

Asker, W.J. *et al*, *Austr. J. Chem.*, 1972, **25**, 2301 (*synth, nqr*)

IC-002129

$Br_5Zn_2^{\ominus}$
μ-Bromotetrabromodizincate(1−)
$[Br_3Zn{-}Br{-}ZnBr_3]^{\ominus}$

M 530.3 (ion)
Cs salt: [117504-89-9]. *Caesium zinc bromide ($CsZn_2Br_5$)*
$Br_5Cs_1Zn_2$ M 663.2
Cryst. Mp 225°. Two polymorph. forms, transition at 215°.

Kuznetsova, I.Ya. et al, Russ. J. Inorg. Chem. (Engl. Transl.), 1988, 33, 1202 (phase diagram, $ZnBr_2/CsBr$ powder struct)

IC-002130

$Br_6C4^{4\ominus}$
Hexabromocadmiate(4−)
[65338-12-7]

$[CdBr_6]^{4\ominus}$

M 591.8 (ion)
Formed from $CdBr_2$ + AsBr in AcOH soln.
[7789-70-0, 10326-41-2, 12318-97-9]

Goubeau, M. et al, CA, 1967, 66, 69833a (synth, cryst struct)
Hieth, H.G. et al, Z. Anorg. Allg. Chem., 1971, 380, 56 (synth)

IC-002131

$Br_6Ce^{2\ominus}$
Hexabromocerate(*IV*)(2−)
$[CeBr_6]^{2\ominus}$

M 619.5 (ion)
Bis-Et_4N salt: [17116-11-9].
Moisture-sensitive deep violet solid.
Bis-Ph_3PH salt: [54595-33-4].
Moisture-sensitive deep violet solid.

Ryan, J.L. *et al*, *J. Phys. Chem.*, 1966, **70**, 2845 (*synth*)
Ryan, J.L., *Inorg. Chem.*, 1969, **8**, 2053 (*synth*)
Inorg. Synth., 1974, **15**, 231 (*synth*)

IC-002132

$Br_6Cl^{\ominus}$
Hexabromochlorate
Chlorohexabromate

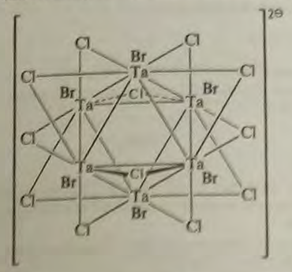
Struct. unknown

M 514.8 (ion)
Et_4N salt: Synth. from $[Et_4N]Cl$ and Br_2 in a desiccator. Dark red cryst. powder. Mp 53°. Exists at r.t. only under Br_2.

Chattaway, F.D., *J. Chem. Soc.*, 1923, **123**, 654 (*synth*)

IC-002133

$Br_6Cl_{12}Ta_6^{2\ominus}$
Hexabromododeca-μ-chlorohexatantalate(2−), 11Cl



M 1990.5 (ion)
Bis-Et_4N salt: [12555-91-8].
Synth. by oxidising $[Ta_6Cl_{12}]^{2\oplus}$ in EtOH with Br_2, adding $[Et_4N]Br$ and saturating with HBr. Red solid (EtOH).
Bis-tetrabutylammonium salt: [68758-52-1].
Synth. by saturating a soln. of $[Ta_6Cl_{12}]Cl_2{\cdot}8H_2O$ in EtOH with HBr, adding $[Bu_4N]Br$ and further HBr. Dark red solid.
Bis-pyridinium salt: [11127-28-9].
Red solid.

Spreckelmeyer, B., *Z. Anorg. Allg. Chem.*, 1969, **368**, 18 (*synth*)
Hughes, B.G. *et al*, *Inorg. Chem.*, 1970, **9**, 1343 (*synth*)

Best, S.A. *et al*, *Inorg. Chem.*, 1979, **18**, 684 (*synth, pe*)

IC-002134

$Br_6Cr^{4\ominus}$
Hexabromochromate(*II*)(4−), 9Cl

$[CrBr_6]^{4\ominus}$

M 531.4 (ion)
Bis-piperazinedium salt: [77152-47-7].
Light green.
Bis-piperazinedium salt dihydrate: [77152-48-8].

Prepd. from $CrBr_2{\cdot}H_2O$ and piperazine.2HBr in HBr. Light blue cryst.

Babar, M.A. *et al*, *J. Chem. Soc., Dalton Trans.*, 1981, 27 (*synth, uv, magnetism*)

IC-002135

$Br_6Cr^{3\ominus}$
Hexabromochromate(*III*)(3−)
[36830-79-2]

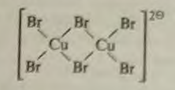
$[CrBr_6]^{3\ominus}$

M 531.4 (ion)
Di-Cs, mono-Li salt: [69275-98-5].
Br_6CrCs_2Li M 804.1
Prepd. from CsBr, Li_2CO_3 and Cr_2O_3 in HBr solns.

Meyer, G. *et al*, *Z. Naturforsch., B*, 1978, **33**, 1476 (*synth, cryst struct*)

IC-002136

$Br_6Cu_2^{2\ominus}$
Di-μ-bromotetrabromodicuprate(*II*)(2−), 8Cl
Hexabromodicuprate(2−). Tribromocuprate(1−) dimer



M 606.5 (ion)
Antiferromagnetically coupled dimer.
Di-K salt: [17568-01-3].
$Br_6Cu_2K_2$ M 684.7
Dark-brown needle-like cryst.
Di-Cs salt:
$Br_6Cs_2Cu_2$ M 872.3
Dark-brown prismatic cryst.
Di-NH_4 salt: [77489-89-5].
Bis-Ph_4As salt: [52873-77-5].

Inoue, M. *et al*, *Inorg. Chem.*, 1967, **6**, 900 (*synth, magnetism*)
Willett, R.D. *et al*, *J. Inorg. Nucl. Chem.*, 1967, **29**, 2482 (*uv*)

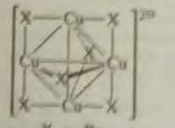
O'Bannon, G. *et al*, *Inorg. Chim. Acta*, 1981, **53**, L131 (*magnetism*)

IC-002137

$Br_6Cu_4^{2\ominus}$
Hexa-μ-bromo-*tetrahedro*-tetracuprate(2−)



X = Br

M 733.6 (ion)
Tetrahedron of Cu atoms within octahedron of bromide ligands. Cu—Cu distances 271.8-275.0 pm.
Bis-tetrapropylammonium salt: [94118-31-7].
Cryst. (EtOH).
Bis-butyltriphenylphosphonium salt: [105011-13-0].
Colourless octahedra (EtOH). Mp 123-124°.

Asplund, M. *et al*, *Acta Chem. Scand., Ser. A*, 1984, **38**, 725 (*synth, cryst struct*)
Andersson, S. *et al*, *Acta Chem. Scand., Ser. A*, 1986, **40**, 210 (*cryst struct, $BuPh_3P$ salt*)

IC-002138

$Br_6Eu^{3\ominus}$
Hexabromoeuropate(*III*)(3−)
[52637-58-8]

$[EuBr_6]^{3\ominus}$ (O_h)

M 631.3 (ion)
Di-Cs, Na salt: [69207-90-5].
Br_6Cs_2EuNa M 920.1
Yellow cryst. Possesses elpasolite struct.
Tris-pyridinium salt: [31869-50-8].
Cryst. ν_1 156, ν_5 164 cm^{-1}.
Tris-Ph_3PH salt: Deliquescent orange-yellow cryst. + $1Ph_3PHBr$. ν_1 155, ν_5 164 cm^{-1}.

Ryan, M. *et al*, *J. Phys. Chem.*, 1966, **70**, 2845 (*synth, uv-vis*)
Choca, M. *et al*, *J. Inorg. Nucl. Chem.*, 1975, **37**, 1425 (*synth, ir, raman*)
Meyer, G. *et al*, *Z. Naturforsch., B*, 1978, **33**, 1476 (*synth, struct*)

IC-002139

$Br_6GaIn^{2\ominus}$
Tribromo(tribromogallate)indate(2−), 10Cl
Hexabromogallateindate(2−)

$[Br_3Ga{-}InBr_3]^{2\ominus}$

M 663.9 (ion)
Bis-tetrabutylammonium salt: [81182-74-3].
Synth. from Gallium indium bromide ($GaInBr_6$), IC-002018 and $[Bu_4N]Br$. White moisture-sensitive solid.

Sinclair, I. *et al*, *Inorg. Nucl. Chem. Lett.*, 1981, **17**, 279 (*synth, raman*)

IC-002140

$Br_6Ga_2^{2\ominus}$
Hexabromodigallate(2−)
[25395-73-7]

$[Br_2Ga{-}GaBr_2]^{2\ominus}$ (D_{3d})

M 618.8 (ion)
Raman ν_{Ga-Ga} 164 cm^{-1}.
Di-Ga(1) salt: [53817-19-7]. *Gallium bromide ($GaBr_{1.5}$)*
Br_6Ga_4 M 758.3
Synth. from $GaBr_3$ and Ga at 180°. White solid.
Bis-Me_4N salt: [41618-77-5].
Synth. by anodic oxidation of Ga in 6M HBr and precipitation with $[Me_4N]Br$. Colourless cryst. (Me_4NO_3). Spar. sol. EtOH. Other R_4N salts also exist.
Bis-Ph_3PH salt: [77187-71-6].
Colourless cryst. Mp 166-162°.
Bis-Ph_4P salt: Colourless cryst. (Me_2NO_3). Sol. Me_2NO_3. Mp 215°.

Evans, C.A. *et al*, *J. Chem. Soc., Dalton Trans.*, 1973, 988 (*synth, ir, raman*)
Wilkinson, M. *et al*, *Inorg. Nucl. Chem. Lett.*, 1974, **10**, 747 (*synth, $GaBr_{1.5}$*)
Klaui, M. *et al*, *Inorg. Nucl. Chem. Lett.*, 1980, **16**, 469 (*synth*)
Inorg. Synth., 1983, **22**, 110 (*synth*)

IC-002141

Br_6HSb
Hydrogen hexabromoantimonate(*V*)(1−), 9Cl, 8Cl

$H[SbBr_6]$

M 602.1
Known derivs. have struct. more complex than molecular formula suggests.
Trihydrate: [117565-24-9].

Structure contains octahedral $TcBr_6^{2-}$ ions and water-bridged dimers of $(H_2O)_5Tc(\mu\text{-}OH_2)Tc(OH_2)_5$. Synth. from $TcBr_3$, Br_2 + HBr aq. Reactive, irregular hexagonal deliquescent black plates. Mp dec. 120°.

Pt- salt: see Hexahydrogen

tetrakis(carbonato-tetraoxomanganate(III,V)) IC-002/300

Gmelin Handbook Inorg. Chem., Syst. No. 10, 1940, 483 (rev.)

Hieber, H. et al. Z. Anorganikgr., 1967, **101**, 113 (synth, crystal struct)

IC-002142

Br_6H_2Tc

Hexabromotechnetic acid

Dihydrogen hexabromotechnetate(2−), 2HCl

[115435-07-9]

H_2TcBr_6

M 580.5

By-product of technetium-bromide cluster synth.

Diacetate: [118435-08-6]. *Bis-hydronium hexabromotechnetate. Diammonium hexabromotechnetate* Red crystal. Mod. sol. HBr, polar org. solvs. Distorted K_2PtCl_6 struct.

Kryuchkov, S.V. *et al. Zh. Neorg. Khim.*, 1987, **32**, 2933; *Russ. J. Inorg. Chem. (Engl. Transl.)*, 1987, **32**, 1714 (*synth, cryst struct, ir, pmr*)

IC-002143

Br_6H_2Te

Hexabromotelluric acid

H_2TeBr_6

M 609.0

Free acid H_2TeBr_6 unknown.

Di-NH_4 salt: Ammonium hexabromotellurate(IV)

(Diammonium hexabromotellurate(2−))

$Br_6H_8N_2Te$ M 643.1

From TeO_2 + NH_4Br in hot conc. aq. HBr. Bright red cryst. O_h geometry around Te. Interatomic distance Te—Br 270 pm.

Das, A.K. *et al. Can. J. Chem.*, 1966, **44**, 939 (*deriv. synth, cryst struct*)

Gmelin Handbook Inorg. Chem., Syst. No. 11, 1978, **B3**, 40 (*bibl*)

IC-002144

Br_3H_3Sb

Trihydrogen hexabromoantimonate(*III*)(3−), 9Cl, 8Cl

Hexabromoantimonic(III) acid

$H_3[SbBr_6]$

M 604.1

Salts synth. from $SbBr_3$ + HBr aq. + amine

Tris-$EtNH_2$ salt: Solid. Mp 218°.

Tris-Et_2NH salt: [38333-00-5].

Pale yellow cryst. Mp 161°. Hexagonal.

Tris-diprop ylamine salt: Mp 128-130°. Monoclinic.

Tris-tripropylamine salt: [38333-05-0].

Solid. Mp 180°.

Tris-butylamine salt: [38415-23-5].

Cryst. Mp 194-196°. Orthorhombic.

Tris-aniline salt: [59450-18-9].

Solid. Mp 188°

$Br_6H_4Mo_2O_2^{2-}$

Diaquahexabromodimolybdate(*II*)(2−), HCl, 10Cl, 9Cl

Bis(tribromodiaquadimolybdate(II)(2−))

M 707.3 (ion)

Eclipsed config. about quadruple Mo—Mo bond; interatomic distance Mo—Mo 213.0 pm. Isostructural with Diaquahexachlorodimolybdate(*II*)(2−), IC-01727.

Bis-pyridinium salt: [68780-18-7].

Synth. from $(NH_4)_4Mo_2Cl_8H_2O$ + [PyH]Br in aq. HBr. Cryst. (aq. HBr/[PyH]Br). Sol. H_2O dec. Formulated as $(PyH)_2[Mo_2Br_6(OH_2)_2]Br$.

Bis-4-methylpyridinium salt: [59949-43-8].

Cryst. Stable in dry air. Sol. H_2O; sl. sol. MeOH, MeCN. Diamagnetic.

Bis-morpholinium salt: [81445-62-7].

Synth. from $[NH_4]_4Mo_2Cl_8H_2O$ in HBr and morphinium hydrobromide at 0°. Cryst. + HBr. Dec. at 87°

Bis-piperidium salt: [73745-07-0].

$Br_6Hf^{2\ominus}$

Hexabromohafnate(*IV*)(2−), HCl

[33751-30-3]

$[HfBr_6]^{2\ominus}$

M 657.9 (ion)

Octahedral. Synth. by melting $HfBr_4$ and $2MBr_x$ in an evacuated silica tube. ΔH_f° −1793 kJ mol^{-1}.

Di-K salt: [91631-06-0]. *Potassium hexabromohafnate(IV)*

Br_6HfK_2 M 736.1

White solid.

Di-Cs salt: [66169-92-4]. *Caesium hexabromohafnate(IV)*

White solid. Proposed as a phosphor.

Bis-Et_4N salt: [21868-89-5].

Synth. by electrochemical oxidation of Hf in Br_2/THF soln. followed by addn. of Et_4NBr. Also by reaction of $HfBr_4$ and Et_4NBr in $SOBr_2$. White solid.

van Bronswyk, W. *et al, Inorg. Chem.*, 1969, **8**, 1395 (*synth, ir, raman*)

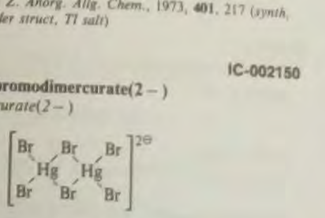
IC-002150

$Br_6Hg_2^{2\ominus}$

Di-μ-bromotetrabromodimercurate(2−)

Hexabromodimercurate(2−)



M 880.6 (ion)

Hexaaquamagnesium(2+) salt:

$Br_6H_{12}Hg_2MgO_4$ M 1013.0

Yellow-gold needles. Mp 221° (closed tube), Mp 113° dec. (open tube).

Bis[[N,N-bis(2-aminoethyl)-1,2-ethanediamine-N,N',N'',N''']bromomercury(1+)] salt: [52654-51-0].

Cryst. (MeOH/2-propanol).

Di-M compd., tetrakis(triphenylarsine oxide) complex:

Synth. from Pb_3AsO_3HBr and $HgBr_2$. White cryst. Mp 146-147°. Ionic compd. made up of $[(Pb_3AsO_3)_4H]^{\oplus}$ cations and $[Hg_2Br_6]^{2\ominus}$ anions.

Bis-Et_4N salt: [61037-50-0].

Cryst.

Bis-tetrabutylammonium salt: [82861-65-2].

Cryst. Mp 100-102°.

Tris(tetrathiotetracene)(2+) salt: [85715-85-1]. *Salt with naphthacene(5,6-c,d:11,12-c',d')bis[1,2]dithiole (1:1)*

Cryst. Formulated as $[(TTT)_3]^{2\oplus}[Hg_2Br_6]^{2\ominus}$. Cation-radical chains stacked parallel to *c*-axis.

Tris(tetraselenotetracene)(2+) salt: [85715-87-3]. *Salt with naphthacene(5,6-c,d:11,12-c',d')bis[1,2]diselenole (1:1)*

Cryst. Formulated as $[(TSeT)_3]^{2\oplus}[Hg_2Br_6]^{2\ominus}$. Cation-radical chains stacked parallel to *c*-axis.

IC-002151

$Br_6In^{3\ominus}$

Hexabromoindate(3−)

$[InBr_6]^{3\ominus}$ (O_h)

M 594.2 (ion)

Tri-Li salt: [41333-37-3]. *Lithium hexabromoindate (Li_3InBr_6)*

Br_6InLi_3 M 615.0

Synth. from LiBr—$InBr_3$ melt. White moisture sensitive solid. Mp 237°

Tri-Na salt: [33248-58-7].

Br_6InNa_3 M 663.2

Synth. from NaBr—$InBr_3$ melt. White moisture sensitive solid.

Tri-K salt: [41333-38-4].

Br_6InK_3 M 711.5

Synth. from KBr—$InBr_3$ melt. White moisture sensitive solid. Mp 320°

Tri-Rb salt: [72860-03-8].

Br_6InRb_3 M 850.6

White moisture sensitive solid.

Tri-Cs salt: [73556-95-3].

Br_6Cs_3In M 992.9

Synth. from CsBr, In_2O_3 and aq. HBr or from CsBr—$InBr_3$ melt. White moisture sensitive solid. Cs_2Li and Cs_2Na salts also descr.

IC-002152

$Br_6In_2^{2\ominus}$
Hexabromodiindate(2−)
$[Br_3In\text{-}InBr_3]^{2\ominus}$

M 709.0 (ion)
An 'ethane-like' anion.
Bis-tetrabutylammonium salt: [59643-24-2].
Synth. from In_2Br_4 + $[Bu_4N]Br$ in xylene. White powder. Spar. sol. Et_2O.
N,N'-Dimethyl-4,4'-bipyridinium(2+) salt: [59643-28-6].
(N,N'-Dimethyl-4,4'-bipyridinium) tetrabromoindate(1−) dibromoindate(1−)
Synth. from $[MebipyH_2][InBr_4]$ + $InBr_3$ in EtOH. Colourless solid. Spar. sol. MeOH, sol. MeCN. Shown to be $[Me_2bipyH_2][InBr_4][InBr_2]$.

Davies, J.E. *et al., J. Inorg. Nucl. Chem.*, 1974, **36**, 805 (*raman*)

IC-002153

$Br_6Ir^{3\ominus}$
Hexabromoiridate(*III*)(3−), 9CI
[18400-15-2]

$[IrBr_6]^{3\ominus}$ (O_h)

M 671.6 (ion)
Synth. from $Ir^{3\oplus}$(aq.) + excess $Br^{\ominus}$
Tri-K salt: [56604-59-2]. *Potassium hexabromoiridate(III)*
Br_6IrK_3 M 788.9
Spar. sol. H_2O. Obt. as hydrate.

Dwyer, F.P. *et al., J. Proc. R. Soc. N.S.W.*, 1947, **81**, 216 (*synth*)
Botiger, G.L. *et al., Spectrochim. Acta, Part A*, 1972, **28**, 925 (*raman, ir*)

IC-002154

Br_6K_2Tc
Potassium hexabromotechnetate(*IV*) (K_2TcBr_6)
[16903-71-2]

K_2TcBr_6

M 656.5
Synth. by reduction of $TcO_4^{\ominus}$ by HBr/KBr, or by treatment of K_2TcCl_6 with conc. HBr. Dark red cryst. Dec. at 730°. Spar. sol. HBr.

[98478-41-5]

$Br_6Mn^{4\ominus}$ IC-002155
Hexabromomanganate(*II*)(4−), 11CI
[34401-68-8]

$[MnBr_6]^{4\ominus}$ (O_h)

M 534.3 (ion)
Tetra-K salt: [38669-04-4]. *Potassium hexabromomanganate(II)* ($K_4(MnBr_6)$)
Br_6K_4Mn M 690.7
Synth. by melting stoichiometric amounts of KBr and $MnBr_2$. Hygroscopic pink cryst.
Tetrakis-Me_2NH_2 salt: [70279-46-8].
Synth. from $[Me_2NH_2]Br$ and $MnBr_2$.

Seifert, H.-J. *et al., Z. Anorg. Allg. Chem.*, 1972, **391**, 302 (*synth, uv, struct*)

$Br_6Mo^{2\ominus}$ IC-002156
Hexabromomolybdate(*IV*)(2−), 9CI
[85192-59-2]

$[MoBr_6]^{2\ominus}$

M 575.3 (ion)
Di-Rb salt: [19639-19-1].
Br_6MoRb_2 M 746.3
Moisture-sensitive olive-green solid.
Di-Cs salt: [19647-78-0].
Br_6Cs_2Mo M 841.1
Prepd. by reaction of $MoBr_4$ or $Mo(CO)_6$ with CsBr in IBr. Moisture-sensitive olive-green solid.
Bis-PPh_3Me salt: [114655-83-3].
Synth. by reaction of $MoBr_4$ with $(PPh_3Me)Br$ in CH_2Br_2. Black-brown cryst. + CH_2Cl_2. Sensitive to hydrolysis.

Edwards, A.J. *et al., J. Chem. Soc.*, 1962, 4643 (*synth*)
Opalovskii, A.A. *et al., Russ. J. Inorg. Chem. (Engl. Transl.)*, 1968, **13**, 196 (*synth*)
Schmidt, I. *et al., Z. Anorg. Allg. Chem.*, 1988, **556**, 57 (*synth, cryst struct*)

$Br_6Mo_2^{2\ominus}$ IC-002157
Hexabromodimolybdate(2−), 11CI
[108456-70-8]

$[Br_3Mo{\equiv}MoBr_3]^{2\ominus}$

M 671.3 (ion)
Tetrabutylammonium salt: [94554-29-7].
Synth. from $(Bu_4N)Br$ + $Mo(CO)_6$. Brown cryst. (CH_2Cl_2/Et_2O). Diamagnetic.

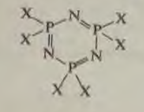
Latorre, J. *et al., Transition Met. Chem.*, 1984, **9**, 447 (*synth*)
Salagre, P.S. *et al., J. Chem. Soc., Dalton Trans.*, 1985, 2263 (*reactions*)

$Br_6Mo_2^{\ominus}$ IC-002158
Hexabromodimolybdate(1−), 11CI
[67954-62-5]

$[Br_3Mo{\equiv}MoBr_3]^{\ominus}$

M 671.3 (ion)
'Ethane-type' struct. proposed with Mo—Mo bond order of 2.5.
Tetrabutylammonium salt: [68024-66-8].
Synth. from $Mo_2(OAc)_4$, Bu_4NBr and HBr. Brown cryst, paramagnetic. Sol. Me_2CO, MeCN, THF. μ_{eff} = 1.5μ_B
Glicksman, H.D. *et al., Inorg. Chem.*, 1978, **17**, 3197 (*synth, uv, ir, esr, pe, deriv*)
Latorre, J. *et al., Transition Met. Chem.*, 1984, **9**, 447.

$Br_6N_3P_3$ IC-002159
2,2,4,4,6,6-Hexabromo-2,2,4,4,6,6-hexahydro-1,3,5,2,4,6-triazatriphosphorine, 9CI, 8CI
Hexabromocyclotriphosphonitrile.
Hexabromocyclotriphosphazene. 2,2,4,4,6,6-Hexabromo-2λ⁵,4λ⁵,6λ⁵-cyclotriphosphaza-1,3,5-triene. 2,2,4,4,6,6-Hexabromo-1,3,5,2λ⁵,4λ⁵,6λ⁵-triazatriphosphinine
[13701-85-4]



X = Br

M 614.3
Slight chair conformation. Interatomic distances (solid): P—N (mean)157.6, P—Br 216.2 pm; angles: PNP 119.3, 122.4°, NPN 118.5°, BrPBr 102.1°. Synth. from NH_4Br + PBr_3 at 150° in a solvent. Orthorhombic cryst. (C_6H_6 or heptane). Readily sol. C_6H_6, CS_2, $CHCl_3$. Less sol. Et_2O, CCl_4, aliphatic hydrocarbons. Mp 192° (188°). When heated in sealed tube at 220° or subjected to γ irradiation at 80°-150° yields homopolymer.
Homopolymer: Tough, rubbery elastomer between −15° and 270°. Mp ~270°.

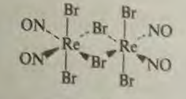
$Br_6N_4O_4Re_2$ IC-002160
Di-μ-bromotetrabromotetranitrosyldirhenium
Bis(tribromodinitrosylrhenium)
[8415]-11-1]



proposed struct.

M 971.8
Dimeric (from ir evidence) with bromo-bridges and *cis*-NO groups. Synth. from $PPh_4[Re(NO)_2Br_4]$ and $AlBr_3$ in CH_2Br_2. Red-brown powder.

Monomer: Tribromodinitrosylrhenium
$Br_3N_2O_2Re$ M 485.9
Unknown.

Mronga, V.N. *et al., Z. Anorg. Allg. Chem.*, 1982, **491**, 237 (*synth, ir, props*)

$Br_6Nb^{\ominus}$ IC-002161
Hexabromoniobate(*V*)(1−), 11CI
[32965-80-3]

$[NbBr_6]^{\ominus}$

M 572.3 (ion)
Octahedral. Many salts known.
Cs salt: [21542-23-4]. *Caesium hexabromoniobate(V)*
Br_6CsNb M 705.2
Synth. by heating CsBr + $NbBr_5$ at 110° for 2 weeks.
Me_4N salt: [21999-78-0].
Synth. from $NbBr_5$ and Me_4NBr in hot MeCN. Dark red solid. Forms a mono-CCl_4 solvate.
Ph_4P salt: [79160-81-9].
Synth. from $NbBr_5$ and Ph_4PBr. Dark red cryst.
[22087-55-4]

$Br_6Os^{2\ominus}$

Hexabromoosmate(*IV*)(2−)

[16920-04-0]

$[OsBr_6]^{2\ominus}$ (O_h)

M 669.6 (ion)
Many salts known, made by reaction of OsO_4 and HBr in the presence of the appropriate cation. Grp. I salts have cubic K_2PtCl_6 struct. Used as a starting material for many other osmium compounds. Ir ν 227, 122 cm^{-1}. Raman 210.6, 169.2, 100 cm^{-1}.

Di-Na salt: Shining brown-black, metallic prisms (deep purple in soln.).
Di-K salt: [16903-69-8].
Brown-black, coppery coloured powder.
Di-H compd.: [48016-85-9].
Synth. from OsO_4 and HBr.
Di-NH_4 salt: [24598-62-7].
Synth. by refluxing OsO_4 and HBr for 2 hr., followed by addition of NH_4Br and EtOH. Minute black cubes. Sol. warm glycerol, ethylene glycol; spar. sol. cold H_2O to give red solns., dec. in hot H_2O; insol. EtOH, MeOH.

$Br_6Rh^{3\ominus}$

Hexabromorhodate(*III*)(3−), 9Cl

$[RhBr_6]^{3\ominus}$

M 582.3 (ion)
2,2',2"-Triammoniotriethylamine salt trihydrate: [56604-58-1].
Red-brown solid. Stable beyond 300°.

Zipp, S.G. *et al, Inorg. Chim. Acta*, 1975, **14**, 83 (*synth, ir, uv*)

IC-002179

$Br_6Ru^{3\ominus}$

Hexabromoruthenate(*III*)(3−), 9Cl

[21159-26-2]

$[RuBr_6]^{3\ominus}$ (O_h)

M 580.4 (ion)
Only isolated in the solid state as two very unusual salts. Easily oxidized in soln. to $[RuBr_6]^{2\ominus}$. V. sol. aq. HBr. The uv spectra reported in the literature strongly resemble those of the oxidized product $[RuBr_6]^{2\ominus}$ and must be treated with suspicion.
Anilinium salt; double salt with anilinium bromide (1:3): [31304-66-2].
Brown monoclinic cryst. Formulated as $[PhNH_3]_3[RuBr_6]Br_3$. Ru—Br 251.4 pm. μ_{eff} = 2.09μ_B. Ir ν_{RuBr} 240, 232 cm^{-1}.
Tris(2-aminoethylammonium(3+) salt: hydrogen bromide complex: [38782-87-5].
Formulated as $[N(CH_2CH_2NH_3)_3][RuBr_6]$·HBr. Ir ν_{RuBr} 240 cm^{-1}; μ_{eff} = 2.01μ_B.

$Br_6Ti^{2\ominus}$

Hexabromotitanate(*IV*)(2−), 11Cl IC-002189
[27709-79-1]

$[TiBr_6]^{2\ominus}$

M 527.3 (ion)
Bis-Et_4N salt: [21336-51-6].
Synth. by mixing CH_2Cl_2 solns. of Et_4NBr and $TiBr_4$ or by electrochemical oxidation of Ti in the presence of bromine. Red solid (CH_2Cl_2).
Bis(thiotrithiazyl) salt: [64094-16-2].
Synth. from $TiBr_4$ and S_4N_3Br in CH_2Cl_2. Orange solid.

Clark, R.J.H. *et al*, *Inorg. Chem.*, 1968, **7**, 1603 (*synth, ir, raman, Et_4N salt*)

$Br_8H_4Mo_6O_4$

Molybdenum bromide hydroxide ($Mo_6Br_8(OH)_4$)

Octabromohexamolybdenum tetrahydroxide

$Mo_6Br_8(OH)_4$

M 1282.9

A Mo_6 octahedral cluster compd. Isol. from alk. solns. of $MoBr_2$. Dark-brown amorphous powder. Forms a tetradecahydrate (yellow cryst.), which is isomorphous with $[(Mo_6Cl_8)(OH)_4(H_2O)_2].12H_2O$.

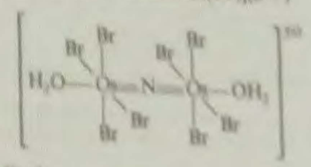
Sheldon, J.C., *J. Chem. Soc.*, 1962, 410 (*synth*)

IC-002211

$Br_8H_4NO_3Os_2^{3\ominus}$

Diaquaoctabromo-μ-nitridodiosmate(*IV*)(3 –)

μ-Nitridobis[aquatetrabromoosmate(IV)](3 –)



M 1069.6 (ion)

Tri-Cs salt: [27119-63-7].

Obt. by reaction of $(NH_4)_2[OsBr_6]$ with Br_2 at 450° in $Y_{Os-N-Os}$ 1070 cm^{-1}.

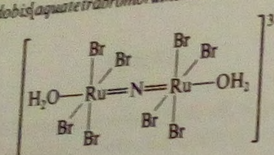
Cleare, M.J. *et al*, *J. Chem. Soc. A*, 1970, 1117 (*synth, ir*)

IC-002212

$Br_6H_4NO_2Ru_2^{3\ominus}$

Diaquaoctabromo-μ-nitridodiruthenate(3−), 9CI

μ-Nitridobis[aquatetrabromoruthenate(IV)]



M 891.4 (ion)

All salts are diamagnetic. Sol. H_2O, aq. HBr. The halide ions are very labile.

Tri-K salt: [21869-69-2].

$Br_6H_4K_3NO_2Ru_2$ M 1008.7

Prepd. by treating $[Ru_2NCl_8(OH_2)_2]^{3\ominus}$ with aq. KOH, followed by aq. HBr. Black cryst. Ir ν_{Ru_2N} 1050; ν_{RuBr} 254, 252 cm^{-1}.

[42735-86-4]

Br_8Nb_3

Niobium bromide (Nb_3Br_8), 11CI

Triniobium octabromide

IC-002214

[12049-24-0]

Nb_3Br_8

M 917.9

Struct. probably analogous to Niobium chloride (Nb_3Cl_8), IC-017416. Synth. by thermal dec. of $NbBr_4$ or by Zn reduction of $NbBr_5$ at 550-600°. Black, moisture-stable solid.

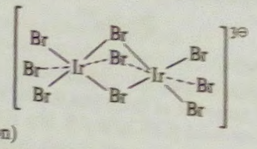
$Br_9Ir_2^{3\ominus}$

Tri-μ-bromohexabromodiiridate(*III*)(3−), 11CI

Nonabromodiiridate(III)(3−)

IC-002221



M 1103.5 (ion)

Tri-Rb salt: [86638-22-4].

$Br_9Ir_2Rb_3$ M 1359.9

Brown solid.

Tri-Cs salt: [86638-23-5].

$Br_9Cs_3Ir_2$ M 1502.2

Fergusson, J.E. *et al, Aust. J. Chem.*, 1983, **36**, 863 (*synth, powder struct*)

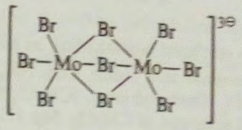
$Br_9Mo_2^{3\ominus}$

Tri-μ-bromohexabromodimolybdate(*III*)(3−), 9CI

Nonabromodimolybdate(III)(3−)

IC-002222

[45976-45-2]



M 911.0 (ion)

Cofacial bioctahedral arrangement around each Mo; Mo—Mo 257-278 pm. $Mo_2Cl_9^{3\ominus}$ and $Mo_2I_9^{3\ominus}$ analogues are also known.

Tri-K salt: [111533-06-3].

$Br_9K_3Mo_2$ M 1028.3

Cryst. Mo—Mo 257 pm.

Tri-Cs: [29013-06-7].

$Br_9Cs_3Mo_2$ M 1309.7

Synth. by reaction between $MoBr_3$ and CsBr at 770°. Air stable deep red cryst. (by subl.). Insol. H_2O. Subl. 770°. Mo—Mo 282 pm; μ_{eff} = 0.8μ_B (293K); temp. dependent.

Tri-rubidium salt: [111533-07-4].

$Br_9Mo_2Rb_3$ M 1167.4

Cryst. Mo—Mo 273 pm.

$Br_9O_4Pb_8Tl$

IC-002223

Lead thallium bromide oxide ($Pb_8TlBr_9O_4$)

[84285-89-2]

$TlPb_8O_4Br_9$

M 2645.1

Consists of isolated $Pb_8O_4^{18\ominus}$ units with 7- and 8-coord. Pb and 8-coordinate Tl. Cryst.

Keller, H.L., *Z. Anorg. Allg. Chem.*, 1982, **491**, 191 (*synth, cryst struct*)

IC-002224

$Br_9Re_2^{2\ominus}$

Nonabromodirhenate(*III,IV*)(2−)

Tri-μ-bromohexabromodirhenate(2−)

$[Re_2Br_9]^{2\ominus}$

M 1091.5 (ion)

Bis-tetrabutylammonium salt: [19584-23-7].
Synth. by reduction of $[Bu_4N]Re_2Br_9$ by Fe in Me_2CO. Rusty-brown solid ($CHCl_3/Et_2O$). Mp 122° dec.

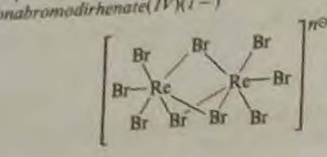
Bonati, F. *et al, Inorg. Chem.*, 1967, **6**, 1353 (*synth, ir, uv, props*)

IC-002225

$Br_9Re_2^{\ominus}$

Tri-μ-bromohexabromodirhenate(1−)

Nonabromodirhenate(IV)(1−)



$n = 1$

M 1091.5 (ion)
Believed to be confacial bioctahedral, as shown.
Tetrabutylammonium salt: Synth. from $(Bu_4N)_4Re_2Br_8$ and Br_2 in CH_2Cl_2. Dark red cryst. ($CH_2Cl_2/CHCl_3$). More sol. than Cl analogue in CH_2Cl_2. Mp 171° dec.

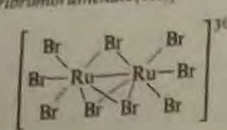
Bonati, F. *et al, Inorg. Chem.*, 1967, **6**, 1353 (*synth, ir, uv, props*)

IC-002226

$Br_9Ru_2^{3\ominus}$

Tri-μ-bromohexabromodiruthenate(*III*)(3−), 10Cl

Nonabromodiruthenate(III). *μ-Tribromobis[tribromoruthenate*(III)]



M 921.2 (ion)
Essentially an ideal confacial bioctahedron, containing a significant metal-metal bond. Formed by dissolving $RuBr_3.xH_2O$ in HBr in the presence of EtOH. Aq. HBr solns. are readily oxidized to $[RuBr_6]^{2\ominus}$ in air. V. sol. aq. HBr. Salts previously reported as containing $[Ru_2OBr_{10}]^{4\ominus}$ are now known to contain $[Ru_2Br_9]^{3\ominus}$, as are salts previously reported to contain $[Ru(OH_2)Br_5]^{2\ominus}$.

Tri-K salt: [66115-10-4].
$Br_9K_3Ru_2$ M 1038.5
Usually contaminated with minor levels of KBr. Purple-black cryst. (hexagonal). ν_{RuBr}, 267, 244 cm^{-1}.

Tri-Rb salt: [66115-11-5].
$Br_9Rb_3Ru_2$ M 1177.6
Purple-black cryst. Ir ν_{RuBr}, 260, 240 cm^{-1}

Tri-Cs salt: [66162-09-2].
$Br_9Cs_3Ru_2$ M 1319.9
Purple-black cryst. Ir ν_{RuBr}, 258, 236 cm^{-1}; μ_{eff} = 1.01μ_B/Ru atom; Ru—Ru 286 pm.

Tris-tetrabutylammonium salt: Purple cryst. Sol. CH_2Cl_2. Ir ν_{RuBr}, 262, 229 cm^{-1}; μ_{eff} = 1.19μ_B/Ru atom.

Benzyltriphenylphosphonium salt: Purple cryst.

1-Ethyl-3-methylimidazolium salt: Purple cryst. Ir ν_{RuBr}, 254, 228 cm^{-1}; Ru—Ru 288, Ru—Br_{term} 251.2, Ru—Br_{br} 250.8 pm.

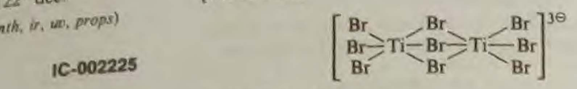
IC-002227

$Br_9Ti_2^{3\ominus}$

Tri-μ-bromohexabromodititanate(*III*)(3−)

[90526-96-8]



M 814.8 (ion)
Contains octahedral Ti.
Tri-Rb salt: [12260-35-4]. *Rubidium nonabromodititanate*(III). *Trirubidium nonabromodititanate(3−). Rubidium titanium bromide* ($Rb_3Ti_2Br_9$)
$Br_9Rb_3Ti_2$ M 1071.2
Orange solid. Mp 647°. Antiferromagnetic, μ_{eff} = 1.34μ_B (300K), 0.71μ_B (80K).

Shchukarev, I.V. *et al, Russ. J. Inorg. Chem. (Engl. Transl.)*, 1963, **8**, 1006 (*phase diagrams, Cs and Rb systems*)
Shchukarev, I.V. *et al, Russ. J. Inorg. Chem. (Engl. Transl.)*, 1964, **9**, 980 (*synth, enthalpy of form*)
Leuenberger, B. *et al, Chem. Phys. Lett.*, 1986, **126**, 255 (*synth, neutron scattering, magnetism, ir, Rb salt*)

IC-002228

$Br_9Tl_2^{3\ominus}$

Tri-μ-bromohexabromodithallate(3−)

Nonabromodithallate(3−). Tetrabromothallate(1−) pentabromothallate(2−), 12Cl

$[Tl_2Br_9]^{3\ominus}$

M 1127.9 (ion)

▷ Toxic.

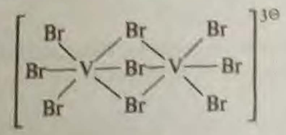
Tri-Cs salt: [79060-94-9].
Synth. from CsBr/TlBr in 3:2 mol. ratio in a closed system at 400° or by heating aq. soln. α→β phase transition occurs at 170°. The β-form is isostructural with $Cs_3Bi_2Br_9$; the α-form contains chains of $TlBr_6$ octahedra and isolated $TlBr_4$ tetrahedra.

Zimmermann, K. *et al, Z. Naturforsch., B*, 1987, **42**, 818 (*synth, struct, raman*)

IC-002229

$Br_9V_2^{3\ominus}$

Tri-μ-bromohexabromodivanadate(*III*)(3−), 11Cl



M 821.0 (ion)
Face-shared octahedra.
Tri-Rb salt: [102682-48-4]. *Rubidium vanadium bromide* ($Rb_3V_2Br_9$)
$Br_9Rb_3V_2$ M 1077.4
Synth. from a melt of RbBr and VBr_3 at 700°. Mag. susc. shows a max. at 12K; J = 5.2 cm^{-1}. Neutron scattering does not show magnetic ordering.

Leuenberger, B. *et al, Inorg. Chem.*, 1986, **25**, 2930 (*synth, neutron scattering, mcd, magnetism*)

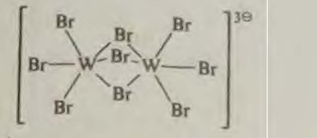
IC-002230

$Br_9W_2^{3\ominus}$

Tri-μ-bromohexabromoditungstate(3−), 9Cl

Nonabromoditungstate(3−)

[72428-80-9]



M 1086.8 (ion)
Prepd. from $[W_2Cl_9]^{3\ominus}$ and $Br^{\ominus}$.
Tri-K salt:
$Br_9K_3W_2$ M 1204.1
Brown, hexagonal plates.

[21732-21-8, 72332-25-3]

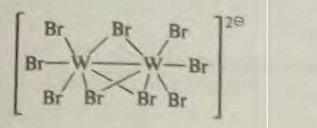
Hayden, J.L. *et al, J. Am. Chem. Soc.*, 1968, **90**, 5291 (*synth, uv*)

IC-002231

$Br_9W_2^{2\ominus}$

Tri-μ-bromohexabromoditungstate(2−), 10Cl, 9Cl

[60267-85-8]



M 1086.8 (ion)
Confacial bioctahedral struct., mixed valence compd. with W—W bond order 2.5; W—W 260.1 pm. μ_{eff} = 1.72μ_B per formula unit (77-300K).
Bis-tetrapropylammonium salt: [60318-96-9].
Black cryst. (MeCN) (dark green when crushed).

McCarley, R.E. *et al, Adv. Chem. Ser.*, 1976, **150**, 318.
Templeton, J.L. *et al, Inorg. Chem.*, 1977, **16**, 3320 (*cryst struct*)
Trogler, W.C., *Inorg. Chem.*, 1980, **19**, 697.

IC-002232

$Br_{10}NNb_2^{3\ominus}$

Decabromo-μ-nitridodiniobate(*V*)(3−), 11Cl

$[Br_5NbNNbBr_5]^{3\ominus}$ (D_{4h})

M 998.8 (ion)
Bioctahedral with linear Nb—N—Nb grouping.
Tri-NH_4 salt: [103111-12-2].
Synth. from $NbBr_5$ and $[NH_4]Br$. Cryst.

Hoerner, M. *et al, Z. Naturforsch., B*, 1986, **41**, 423 (*synth, cryst struct*)

IC-002233

$Br_{10}NTa_2^{3\ominus}$

Decabromo-μ-nitridoditantalate(*V*)(3−), 11Cl

(μ-Nitrido)bis(pentabromotantalate(V))

$[Br_5TaNTaBr_5]^{3\ominus}$

M 1174.9 (ion)
D_{4h}-symmetry with linear Ta-N-Ta bridge. Ta—N 185 pm. Corresp. iodo complex has the same struct.
Tri-NH_4 salt: [73820-91-4].
Synth. by heating $[NH_4]Br$ and $TaBr_5$ to 400° in a sealed glass ampoule. Greenish-yellow, moisture-sensitive solid.

Frank, K. *et al, Z. Naturforsch., B*, 1980, **35**, 300 (*synth, cryst struct*)
Hoerner, M. *et al, Z. Naturforsch., B*, 1986, **41**, 423 (*synth, cryst struct, iodo analogue*)

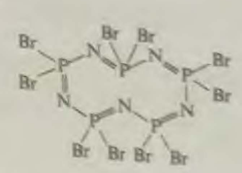
IC-002234

$Br_{10}N_5P_5$

2,2,4,4,6,6,8,8,10,10-Decabromo-2,2,4,4,6,6,8,8,10,10-decahydro-1,3,5,7,9,2,4,6,8,10-pentazapentaphosphecine, 9Cl, 8Cl

Decabromocyclopentaphosphanitrile. Decabromocyclopentaphosphazene. 2,2,4,4,6,6,8,8,10,10-Decabromo-2λ⁵,4λ⁵,6λ⁵,8λ⁵,10λ⁵-cyclopentaphosphazo-1,3,5,7,9-pentaene

[15763-08-3]



M 1023.9
Interatomic distances: P—N 157.1, P—Br 217.5 pm; angles: NPN 114.3, 120.5°, PNP 131.2, 136.6, 143.8°.
Synth. from PBr_5 + NH_4Br. Triclinic cryst. Mp 104.5°.

Coxon, G.E. *et al, J. Chem. Soc. A*, 1967, 1568 (*mi*)
Coxon, G.E. *et al, Spectrochim. Acta, Part A*, 1968, **24**, 2145 (*ir, raman*)

IC-002236

$Br_{10}ORu_2^{4\ominus}$

Decabromo-μ-oxodiruthenate(4−), 9Cl

μ-Oxobis[pentabromoruthenate(IV)]

[48063-50-9]

$[Ru_2OBr_{10}]^{4\ominus}$

M 1017.1 (ion)
Non-existent sp. Despite many claims as to the prepn. and characterization of this species, it is now known not to exist (as yet); salts claimed in the literature to contain $[Ru_2OBr_{10}]^{4\ominus}$ actually contain $[Ru_2Br_9]^{3\ominus}$.

San Filippo, J. *et al, Inorg. Chem.*, 1976, **15**, 2809; 1977, **16**, 1066.
Appleby, D. *et al, J. Chem. Soc., Dalton Trans.*, 1990, 1879.

IC-002237

$Br_{10}O_4Pb_9$

Lead bromide oxide ($Pb_9Br_{10}O_4$)

Basic lead bromide

[85249-97-4]

$Pb_9O_4Br_{10}$

M 2727.8
Struct. contains $[Pb_6O_4]^{2\oplus}$ clusters. Cryst.
Keller, H.L., *Angew. Chem., Int. Ed. Engl.*, 1983, **22**, 324 (*synth, cryst struct*)

IC-002238

$Br_{10}Si_4$
Decabromotetrasilane, 9CI
[81626-34-8]

$Br_3SiSiBr_2SiBr_2SiBr_3$

M 911.3
Synth. by cleavage of octaphenylcyclotetrasilane with Br_2 followed by reaction with $HBr/AlBr_3$. Mp 82-84°.
Hassler, K. *et al*, *Z. Anorg. Allg. Chem.*, 1982, **488**, 27 (*synth, ir, raman, Si-29 nmr*)

IC-002239

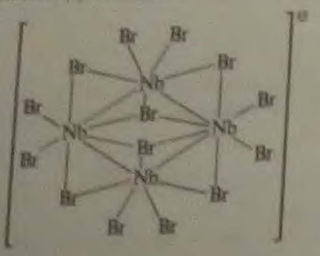
$Br_{11}Hg_3^{\ominus}$
Octa-μ-bromotribromopentamercurate(1−)
Undecabromopentamercurate(1−)

$[Hg_3Br_{11}]^{\ominus}$

M 1881.8 (ion)
Two different mercury environments: Hg(1) has 2 short Hg—Br and 4 long Hg—Br contacts, Hg(2) has 2 short Hg—Br and 5 long Hg—Br contacts.
K salt: [73912-79-5].
$Br_{11}Hg_3K$ M 1920.9
Cryst.
Tl(I) salt: [12049-27-3]. *Mercury thallium bromide* (Hg_3TlBr_{11})
$Br_{11}Hg_3Tl$ M 2086.2
Cryst. Dec. at 210°.
NH_4 salt: [73907-59-2].
Cryst.
Huart, J., *Bull. Soc. Fr. Mineral. Cristallogr.*, 1966, **89**, 23 (*thermal anal*)
Brodersen, K. *et al*, *Z. Naturforsch., B*, 1980, **35**, 253 (*synth, cryst struct*)

IC-002240

$Br_{11}Nb_4^{\ominus}$
Undecabromotetraniobate(1−)
Tetra-μ-bromodi-μ$_3$-bromopentabromotetraniobate(1−), 10CI

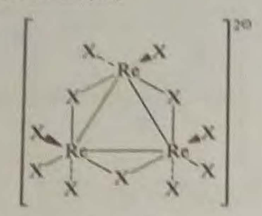


core cluster

M 1250.5 (ion)
Planar arrangement of 4 Nb, bridging Br on each edge and Br bridging 3 Nb. Each Nb is octahedral. Stoichiometry attained by extensive bridging between clusters.
Cs salt:
$Br_{11}CsNb_4$ M 1383.4
Synth. by heating CsCl, Nb_3Cl_8 and Nb in a sealed tube at 730/700°. Solid.
Broll, A. *et al*, *Z. Anorg. Allg. Chem.*, 1969, **367**, 1 (*synth, cryst struct, ir*)

IC-002241

$Br_{11}Re_3^{2\ominus}$
Tri-μ-bromooctabromotrirhenate(*III*)(2−), 8CI
Undecabromotrirhenate(III)

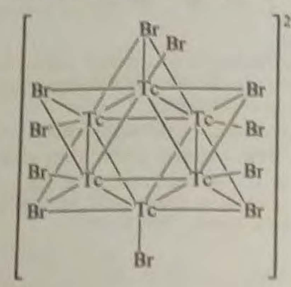


X = Br

M 1437.5 (ion)
Di-Cs salt:
$Br_{11}Cs_2Re_3$ M 1703.3
Synth. from CsBr and $ReBr_3$ in HBr aq. or in HBr/EtOH. Small black needle-shaped cryst.
Fergusson, J.E. *et al*, *Proc. Chem. Soc., London*, 1964, 189 (*synth, props*)
Elder, M. *et al*, *Inorg. Chem.*, 1966, **5**, 1763 (*cryst struct*)

IC-002242

$Br_{11}Tc_6^{2\ominus}$
Undecabromohexatechnetate(2−)
Penta-μ$_3$-bromohexabromotechnetate(2−), 12CI



M 1472.3 (ion)
Octahedron of Tc atoms each with one terminal Br, and 5 Br over faces. This anion, with similar $[Tc_6Br_{12}]^{\ominus}$ and $[Tc_8Br_{13}]^{\ominus}$, is obt. by reaction of $HTcO_4$ or of H_2TcBr_6 with HBr.
Bis-tetrabutylammonium salt: [118674-37-6].
$\mu_{eff} \simeq 1.6\mu_B$.
Bis[$H_3O(OH_2)_3$]$^{\oplus}$ salt: [105857-22-5]. *Bis[triaqua-μ$_3$-oxotrihydrogen(1+)] undecabromohexatechnetate(2−)*
Reddish-black cryst. Sol. EtOH, polar org. solvs.
[106417-98-5]

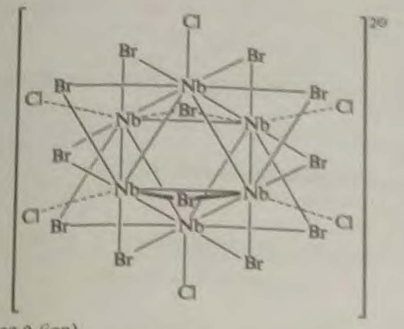
IC-002243

$Br_{12}Cl_6Nb_6^{2\ominus}$
Dodeca-μ-bromohexachlorohexaniobate(2−), 11CI
Hexaniobium dodecabromide hexachloride
[12514-58-8]



M 1729.0 (ion)
Bis-Et_4N salt: [12567-93-0].
Synth. by dissolving $[Nb_6Br_{12}]Br_2.8H_2O$ in EtOH saturated with HCl gas and oxidising with Cl_2, then adding $[Et_4N]Cl$. Black solid.
Bis-pyridinium salt: [11141-41-6].
Synth. by dissolving $[Nb_6Br_{12}]Br_2.8H_2O$ in EtOH, saturating with HCl, oxidising with H_2O_2 followed by Py in EtOH. Black solid. Transforms irreversibly into $[NbBr_6Cl_6]Br_6$ on heating.
Hughes, B.G. *et al*, *Inorg. Chem.*, 1970, **9**, 1343 (*synth*)
Fleming, P.B. *et al*, *Inorg. Chem.*, 1970, **9**, 1769 (*ir*)

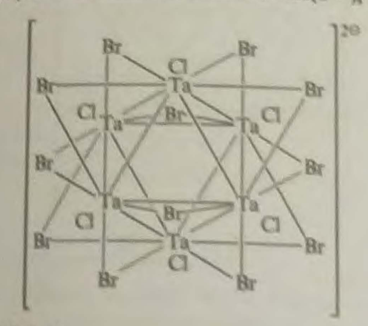
IC-002244

$Br_{12}Cl_6Ta_6^{2\ominus}$
Dodeca-μ-bromohexachlorohexatantalate(2−), 11CI



M 2257.2 (ion)
Presumed struct. shown.
Bis-Et_4N salt: [12555-94-1].
Synth. by Cl_2 oxidation of a soln. of $[Ta_6Br_{12}]^{2\oplus}$ in EtOH followed by $[Et_4N]Cl$. Deep red air-sensitive solid.
Bis-pyridinium salt: [11127-30-3].
Synth. by H_2O_2 oxidation of $Ta_6Br_{12}Cl_2$ in HCl/EtOH and addition of Py. At 200° converts exothermically to $[(Ta_6Br_6Cl_6)Br_6]^{2\ominus}$.
Hughes, B.G. *et al*, *Inorg. Chem.*, 1970, **9**, 1343 (*synth*)
Fleming, P.B. *et al*, *Inorg. Chem.*, 1970, **9**, 1769 (*ir*)

Schaefer, H. *et al*, *Z. Anorg. Allg. Chem.*, 1984, **517**, 185 (*reaction*)

IC-002245

$Br_{12}Mo_6$
Molybdenum bromide (Mo_6Br_{12})
Octa-μ$_3$-bromotetrabromohexamolybdenum, 9CI. Molybdous bromide
[12234-30-9]

$[Mo_6Br_8]Br_4$

M 1534.4
The 6 Mo atoms are arranged in an octahedron with 8 Br-bridges between them. The other 4 Br atoms bridge between clusters. Prepd. from Mo + Br_2 at 600-700°, by fusing $MoCl_2$ with LiBr, or by disproportionation of $MoBr_3$. Yellowish-red amorphous powder. Hygroscopic. Infusible. Dissolves in warm strong bases to give $(Mo_6Br_8)(OH)_4.nH_2O$. Addition of conc. HCl or HI to an alk. soln. gives $(Mo_6Br_8)X_4$ (X = Cl, I). Insol. H_2O, EtOH; sol. boiling DMSO.
'Monomer': Molybdenum bromide ($MoBr_2$). Molybdenum dibromide
Br_2Mo M 255.7
Has no separate existence.
[9018-99-9, 13446-56-5, 43140-50-7]

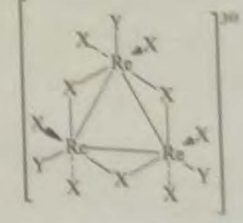
$Br_{12}Re_3^{3\ominus}$
Tri-μ-bromononabromotrirhenate(*III*)(3−), 8CI
Dodecabromotrirhenate(III)(3−)



X = Y = Br

M 1517.4 (ion)
Tri-Cs salt: [24669-21-4].
$Br_{12}Cs_3Re_3$ M 1916.1
Synth. from $ReBr_3$, CsBr and HBr aq. Red cryst.
Fergusson, J.E., *Coord. Chem. Rev.*, 1966, **1**, 459 (*props*)
Elder, M. *et al*, *J. Chem. Soc., Chem. Commun.*, 1968, 731 (*synth, cryst struct*)

IC-002247

$Br_{12}Ru_5^{2\ominus}$
Ruthenium violet

$[Ru_5Br_{12}]^{2\ominus}$

M 1464.1 (ion)
The best (but probably incorrect) description of the chromophore present in ruthenium violet solns. Produced when aq. or alcoholic HBr soln. of $RuBr_3$ is reduced by H_2, Zn or Al. Analogues to Ruthenium blue. IC-017522. Valuable synthetic reagent. Violet-blue soln. Some poorly defined salts have been isol. Sol. H_2O, alcohols.

1,4-Xylylenebis(triphenylphosphonium)(2+) salt: Black solid.

$Br_{24}Ta_8$

Tantalum bromide (Ta_8Br_{24}), 8CI

[12514-63-5]

$[Ta_6Br_{12}][TaBr_6]_2$

M 3365.2
Thought to contain Ta_6Br_{12} octahedra. Synth. by melting $TaBr_4$ or by Al reduction of $TaBr_5$ in a 430-320° temp. gradient. Green solid.

Converse, J.G. *et al, Inorg. Chem.*, 1970, **9**, 1366 (*synth, ir*)

IC-002262

$Br_{42}Ta_{15}$

Tantalum bromide ($Ta_{15}Br_{42}$), 8CI

[12514-64-6]

$2Ta_6Br_{15}{\cdot}3TaBr_4$

M 6070.1
Synth. by heating $TaBr_4$ + $TaBr_5$ to 405-410° in a sealed tube. Brown solid. Paramagnetic μ_{eff} = 2.81 (295K), 2.31μ_B (77K).

Converse, J.G. *et al, Inorg. Chem.*, 1970, **9**, 1366 (*synth, ir, magnetism*)

IC-002263

C

Carbon

[7440-44-0]

C

M 12.0
Atomic No. 6; ground state electron config. $[He]2s^22p^2$. ^{12}C occurs in 98.9% natural abundance with ~1.1% ^{13}C, the latter being an important nmr nucleus. Elemental carbon occurs in cryst. and amorph. forms in the earth's crust. Manufactured forms include activated carbon, carbon black and coke. Carbon is widely distributed in the forms of fossil fuels (coal, gas, oil), as carbonaceous rocks (eg. limestone, dolomite), as atmospheric and dissolved CO_2. At least 6 crystalline forms known. Essential biological role: basis of all life. Abundance: 480 ppm earth's crust.

▷ FF5250100.

Diamond [7782-40-3]
Mineral. Diamond transforms into graphite above 1500° *in vacuo*. Giant molecule. Each C atom covalently bonded to 4 others tetrahedrally. For. C—C 154 pm. Hardest known substance. d 3.52. n_D 2.42. Hardness, Mohs' scale 10.

Graphite [7782-42-5]
Widely distributed in the earth's crust. Diamagnetic. Struct. comprises infinite layers of sp^2 C atoms in the form of hexagons lying in planes. Stacking arrangement ABAB. C—C 141.5 pm. Inter layer spacing 335.4 pm. Graphite also exists in an ABCABC stacking order (rhombohedral). Electrical cond. results from slight overlap of valency and conduction bands. Vast range of electrical and lubricating applications and as a moderator in thermal nuclear reactors. Highly refractory black solid, burns slowly in air above 450°. Forms many intercalation compds. with K, Rb, Cs and with many compds. Subl. 3850°. Triple pt. 3850°/120 atm. Other naturally occurring forms include Chaoite and Lonsdaleite.

Fullerene-C_{60} [99685-96-8]
Footballene. Buckminsterfullerene. Buckyball
C_{60} M 720.6
Truncated icosahedral (soccerball-shaped) struct., all 60 atoms equivalent in a rigid cage struct. formed of 5- and 6- membered rings. Ccp in solid state. Forms spontaneously when C is laser vapourised; in smoke from C arc. Forms metal-containing compds. which are superconductors, e.g. K_3C_{60}. Ultra stable mustard-coloured needles and plates. Sol. org-solvs. (magenta soln.). Mp >280°. ^{13}C nmr δ 143.2 (S) ppm.

Fullerene-C_{70} [115383-22-7]
[5,6]Fullerene-C_{70}
C_{70} M 840.7
Contains 5 different groups of C atoms in ratio 10:10:20:20:10. Elongated molecule with D_{5h} symmetry. Stacks in ccp or hcp from in solid state. Stable reddish brown solid or brown-black cryst. Sol. many org. solvs. esp. aromatic solvs. (port-wine coloured). Mp >280°. Closely related is a cylindral form nick-named Buckytubes. ^{13}C nmr-5 peaks.

CAgN

Silver(*I*) cyanide (AgCN)

IC-002264

Argentous cyanide

[506-64-9]

AgCN

M 133.8
Struct. comprises infinite linear chains of metal atoms linked through CN groups. Prepd. by adding aq. KCN or NaCN to aq. $AgNO_3$. Used in silver plating; formerly used for prep. of dil. HCN by treatment with HCl. White or greyish, odourless powder. Stable in dry air. Darkens on exp. to light. Insol. H_2O, alcohols, dil. acids. Sol. aq. alkali cyanides, boiling conc. HNO_3. Dec. at 320°.

▷ Deadly poison. Skin and severe eye irritant. VW3850000.

[CAlN]

Aluminium carbide nitrides

IC-002267

Aluminium carbonitride

Aluminium carbide nitride (Al_4C_3N) [12180-19-7]
C_3Al_4N M 184.9
Struct. is related to AlN and Al_4C_4 with tetrahedral coordn. of N, tbp or octahedral carbon, and 4-coord. Al. Synth. from AlN in C crucible in N_2 at 2000°.

Aluminium carbide nitride ($Al_6C_3N_2$)
$C_3Al_6N_2$ M 225.9
Other related compds. include $Al_7C_3N_3$ and $Al_8C_3N_4$.

[CAlO]

Aluminium carbide oxide

IC-002268

Aluminium oxycarbide

Aluminium carbide oxide (Al_4CO_4) [12011-53-9]
CAl_4O_4 M 183.9
$Al(O_3C)$ tetrahedra share edges and corners. Synth. from Al_2O_3 + Al_4C_3 at 1800°. Colourless transparent laths.

Aluminium carbide oxide (Al_2CO) [12011-50-6]
CAl_2O M 81.9
May be formulated as $[AlO]_n[Al_2C_2]_n[AlO]_n$ with long-range disorder. Struct. related to wurtzite. Synth. from Al_2O_3 + Al_4C_3 at 2000°. Hexagonal needles.

IC-002270

CAsV$_3$
Vanadium arsenide carbide (V$_3$AsC), 8CI
[12127-23-0]

V_3AsC

M 188.8
Cr_3AlC-like struct. Synth. by heating the elements to 1100°.

Boller, H. *et al, Monatsh. Chem.*, 1966, **97**, 1053.

IC-002271

CAsV$_3$
Vanadium arsenide carbide (V$_3$AsC), 8CI

V_3AsC

M 239.7
C is in octahedral sites of the V_3As lattice (latter related to Re_3B). Synth. by heating the elements to 1100°.

Boller, H. *et al, Monatsh. Chem.*, 1967, **98**, 2127 (*synth, cryst struct*)

IC-002272

CAuClO
Carbonylchlorogold, 9CI
Gold carbonyl chloride
[50960-82-2]

Au(CO)Cl

M 260.4
Useful starting material for synthesising Au(I) compounds. Moisture-sensitive sublimable cryst. Stable to 110°. Sol. C_6H_6, toluene, CH_2Cl_2, CCl_4, $SOCl_2$, THF. Subl. 95°. Extremely reactive to water. CO lost when treated with Py, PPh_3, CNC_6H_{11} etc. Ir ν_{CO} 2153 cm^{-1} (C_6H_6).

[CB]

IC-002274

Boron carbides
Carbon borides
Several phases reported eg. $B_{50}C$, $B_{26}C_2$, $B_{25}C_2$, $B_{22}C_3$, B_4C in addition to B_4C ($B_{12}C_3$) and also BC, BC_2, and B_2C.

Boron carbide (B_4C), 9CI, 8CI [12069-32-8]
Carbon tetraboride
C_4B M 58.8
Rhombohedral cell. Struct. similar to that of rhombohedral B. Each B atom is bonded to 5 others in an icosahedron, as well as to either a C or B atom in an adjacent icosahedron. Synth. from B_2O_3 in a graphite furnace at 1400-1850°; $BCl_3 + CCl_4$ under H_2 at 1200-2000°; $BCl_3 + CH_4$ at 1900°; $B_2O_3 + Mg + C$ at 1000-1200°. An abrasive (hardness approaching that of diamond); fuel element in nuclear reactors; material for lightweight armour; used to manuf. refractory briquettes. Available as a fibre. Dark grey, almost black, needles and plates, with metallic lustre. Mp 2450° (2350°). Low density, high strength material with good thermal and chemical stability. Resistant to most acids. Rapidly attacked by molten alkali. Semiconductor. Attacked by $HNO_3 + H_2SO_4 + HF$. Hydrolysed (H_2O) at 800-950° → $B_2O_3 + C + H_2$. Oxidised in air at 800-1000°.

CBMo$_2$ **IC-002278**
Molybdenum boride carbide (Mo_2BC)
[12179-61-2]

Mo_2BC

M 214.7
Orthorhombic cell, carbon is octahedrally coord. by Mo and B has trigonal prismatic coord. and forms chains as in CrB. Obt. by arc-melting appropriate amounts of Mo metal filings, boron and carbon (as graphite) in a gettered Ar atm. V. hard solid. Insol. Mp ~2800°.

Jeitschko, W. *et al, Monatsh. Chem.*, 1963, **94**, 65 (*struct*)
Smith, S.G. *et al, Acta Crystallogr., Sect. B*, 1969, **25**, 698 (*struct, synth*)

CBNb$_2$ **IC-002279**
Niobium boride carbide (Nb_2BC), 11CI
[81030-29-7]

Nb_2BC

M 208.6
Phases $Mo_{2-x}Nb_xBC$ are known for $0 \leqslant x \leqslant 0.80$. Isostructural with Mo_2BC. Only known as a solid soln. in Mo_2BC. Synth. by arc-melting Mo + Nb + B + C.

Lejay, P. *et al, J. Less-Common Met.*, 1981, **82**, 193 (*synth, struct, magnetism*)

CBTa$_2$ **IC-002280**
Tantalum boride carbide (Ta_2BC), 11CI
[81030-31-1]

Ta_2BC

M 384.7
Synth. by dissolving B in Ta. Solid solns. $Mo_{1-x}Ta_xBC$ ($0 < x < 0.35$) may be synth. by arc-melting the components. Possesses same unit cell parameters as Ta, but is much harder.

[67954-27-2]

Lejay, P. *et al, J. Less-Common Met.*, 1981, **82**, 193 (*synth, solid solns*)

CBZr$_2$ **IC-002281**
Zirconium boride carbide (Zr_2BC), 11CI
Dizirconium boride carbide
[81030-33-3]

Zr_2BC

M 205.2
This phase is only known as solid solns. in Mo_2BC. The composition range in $Mo_{2-x}Zr_xBC$ is $0 \leqslant x \leqslant 0.35$. Struct. comprises layers of edge-sharing MC_6 octahedra; these layers are separated by layers of boron atoms which form zig-zag chains through trigonal prisms of M atoms. Synth. by arc-melting Mo + Zr + B + C in an argon atm. The various phases are superconducting with T_c between 6 and 7K.

Lejay, P. *et al, J. Less-Common Met.*, 1981, **82**, 193 (*synth, superconductivity*)

CB$_2$F$_4$O **IC-002282**
Hexafluorotetraborane carbonyl
Boron fluoride (B_2F_4) compd. with carbon monoxide (1/1)
[12244-49-4]

$(F_2B)_2B—CO$

M 185.2
Solid. Sol. CCl_3F. Mp 40°.

Timms, P.L., *J. Am. Chem. Soc.*, 1967, **89**, 1629 (*synth, ir, ms, F-19 nmr*)

CBaNa$_2$Nd$_2$O$_{16}$Si$_4$ **IC-002283**
Barium neodymium sodium carbonate silicate ($BaNd_2Na_2(CO_3)(Si_2O_{13})$)

$Na_2BaNd_2[Si_2O_{13}][CO_3]$

M 836.1
Synthetic monocyclosilicate (4 SiO_4 tetrahedra per ring). Na, Nd octahedral, Si tetrahedral, Ba hendecahedral, C trigonal planar. Cryst.

Malinovskii, Yu.A., *Sov. Phys.-Dokl. (Engl. Transl.)*, 1983, **28**, 829 (*cryst struct*)

CBaO$_3$ **IC-002284**
Barium carbonate ($BaCO_3$)
Carbonic acid, barium salt, 8CI
[513-77-9]

$BaCO_3$

M 197.3
Struct. resembles aragonite ($CaCO_3$). Synth. by addition of aq. $[NH_4]HCO_3$ to aq. $BaCl_2$ at ⩽ 45°. Commercially available. Rat poison. Used in prep. of $YBa_2Cu_3O_{7-x}$ high transition temp. superconductors. White orthorhombic cryst.; becomes hexagonal at 803° and cubic at 976°. Dec. on heating by CO_2 loss. Dissolves in

acids to form corresp. Ba salts. Prac. insol. H_2O (2.2×10^{-3} g per 100 cm^3 at 18°; 6.5×10^{-2} g per 100 cm^3 at 100°); insol. EtOH. Mp 1740° (90 atm.). ΔH_f° −1216 kJ mol^{-1}; ΔG_f° −1138 kJ mol^{-1}; S° 112 J K^{-1} mol^{-1}.

▷ Highly toxic. Irritant. CQ8600000.

Mineral-form [14941-39-0]

Witherite

Found as low-temp. mineral in hydrothermal vein deposits. Pseudo-hexagonal dipyramids, white, sometimes with pale yellow, greenish or brown tinge

CBi_2O_5 IC-002285

μ-[Carbonato(2−)-*O*:*O*']bis[dioxodibismuth], 9CI

(Carbonato)dioxodibismuth, 8CI. (μ-Carbonato) dioxodibismuth, 8CI. Bismuth carbonate oxide. [Carbonylbis(oxy)]bis[oxobismuthine], 10CI

$(BiO)_2CO_3$ (approx. composition)

M 509.9

Contains variable amounts of water. Synth. $Bi(NO_3)_3$ + Na_2CO_3 in soln. Veterinary and other medical uses (mild astringent). Also used in ceramics to give pearly surfaces. Odourless, tasteless, white powder. Practically insol. H_2O. Sol. mineral acids. On heating, gives Bi_2O_3.

Mineral-form [12069-37-3]

Bismutite

Tetragonal layer struct. A commonly occuring secondary mineral. Found in Europe, USSR, S. Africa, S. America, Australia (N.S. Wales) and is particularly widespread in the USA. Straw-coloured to brownish-yellow vitreous cryst. Contains small amounts H_2O.

Gmelin Handbook Inorg. Chem., Syst. No. 19, 1927, 178; 1964, 829.

CBrNO — IC-002298

Bromine isocyanate

[3644-72-2]

$BrN{=}C{=}O$

M 121.9
Synth. from Br_2 + AgCNO at 150°. V. moisture-sensitive yellow cryst., at low temp. melting to brown liq. which rapidly dimerises to $Br_2NC(O)NCO$ at −40°. Mp −48°.

▷ Explosive.

[91914-88-4, 91914-89-5]

Gottardi, W., *Angew. Chem., Int. Ed. Engl.*, 1971, **10**, 416 (*synth, ir*)
Jemson, H.M. *et al, Chem. Phys. Lett.*, 1984, **108**, 496 (*microwave*)

CBrNS — IC-002299

Bromine thiocyanate

Thiocyanogen bromide

[29284-59-1]

$N{\equiv}CSBr$

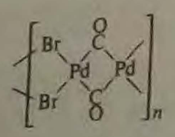
M 137.9
Interatomic distances: Br—S 218.0, N—C 115.6, S—C 170.1 pm; angle: BrSC 99.8°. Formed from $Pb(SCN)_2$ + Br_2 or $(SCN)_2$ + Br_2. Colourless cryst. Sublimable but readily dec. to Br_2.

Nelson, M.J. *et al, J. Chem. Soc.*, 1960, 604 (*synth, ir*)
Frost, D.C. *et al, J. Am. Chem. Soc.*, 1981, **103**, 4423 (*synth, pe*)
Jemson, H.M. *et al, Can. J. Chem.*, 1987, **65**, 2478 (*synth, microwave*)

CBrOPd — IC-002300

Bromocarbonylpalladium, 10Cl, 9Cl

[43732-38-3]



M 214.3
Polymeric. Catalyses carbonylation of phenols. Yellow solid or green solid. Darkens at 145°, to black at 200°.

[31691-41-5]

Colton, R. *et al, Aust. J. Chem.*, 1973, **26**, 2607 (*synth, ir*)
Goggin, P.L. *et al, J. Chem. Soc., Dalton Trans.*, 1974, 534 (*synth, ir*)

CBrORu — IC-002301

Bromo(carbonyl)ruthenium(*I*)

$[Ru(CO)Br]_n$

M 208.9
Polymeric as solid; struct. unknown. Prepd. by treating $RuBr_3$ with CO (350 atm.; 180°). Colourless cryst. Insol. org. solvs. Dec. at 200° to give Dibromodicarbonylruthenium, IC-002839 and Ru metal. Dec. in H_2O and acid; reduces Ag(*I*).

Manchot, W. *et al, Chem. Ber.*, 1930, **63**, 1635 (*synth*)

CBr_2ClF — IC-002302

Dibromochlorofluoromethane, 9Cl, 8Cl

Fluorocarbon 11B2. Halon 1112

[353-55-9]

Br_2CClF

M 226.2
Fire extinguishing agent, solvent. Liq. d^{22} 2.32. Bp 79.5-80.5°.

Haszeldine, R.N., *J. Chem. Soc.*, 1952, 4265 (*synth*)
U.S. Pat., 2 716 668, (1955); *CA*, **51**, 2016i (*manuf*)

CBr_2Cl_2 — IC-002303

Dibromodichloromethane, 9Cl

R 10B2

[594-18-3]

CCl_2Br_2

M 242.7
d_0^{25} 2.42. Mp 38° (22°). Bp 150.2° (135°). Turns yellow on exp. to light.

Arnold, M., *Justus Liebigs Ann. Chem.*, 1887, **240**, 208 (*synth*)
Volkringer, H. *et al, Compt. Rend. Hebd. Seances Acad. Sci.*, 1937, **204**, 1927 (*synth*)

CBr_2F_2 — IC-002304

Dibromodifluoromethane

Fluorocarbon 12B2. Halon 1202. Difluorodibromomethane

[75-61-6]

CBr_2F_2

M 209.8
Obt. by bromination of CH_2F_2. Fire-fighting agent; reagent for organic synth. Colourless, heavy non-flammable liq. Insol. H_2O. d_{15} 2.306 (2.288). Mp −110° (−141°). Bp 24.5° (23.2°). $T_{crit.}$ 198.2°.

▷ Mod. toxic; OES 860 mg m^{-3}. Dec. to toxic carbonyl halides if strongly heated in air. PA7525000.

Hudlický, M., *Chemistry of Organic Fluorine Compounds*, Pergamon, Oxford, 1961 (*rev*)
Hamilton, J.M., *Adv. Fluorine Chem.*, 1963, **3**, 117.

Sax, N.I. *et al, Dangerous Properties of Industrial Materials*, 7th Ed., Van Nostrand-Reinhold, 1989, 1109.

CBr_2F_3N — IC-002305

Dibromo(trifluoromethyl)amine

N,N-Dibromo-1,1,1-trifluoromethanamine, 11Cl

[88453-18-3]

F_3CNBr_2

M 242.8
From CF_3NClBr + Br_2 or from $CF_2{=}NBr$ + CsF + Br_2. Pale yellow solid involatile at −75°. Dec. in sunlight to $F_3CN{=}NCF_3$. Mp −56°.

Zheng, Y.Y. *et al, Inorg. Chem.*, 1984, **23**, 518 (*synth, ms, ir, F-19 nmr*)
O'Brien, B.A. *et al, J. Am. Chem. Soc.*, 1984, **106**, 4266 (*synth*)

CBr_2O — IC-002306

Carbonyl bromide

Carbonic dibromide, 9Cl. Dibromoketone

[593-95-3]

$COBr_2$

M 187.8
Interatomic distances: Br—C 205, C=O 113 pm; angle: BrCBr 110°. Formed from CO + Br_2 or by oxidation of CBr_4. Commercially available. Colourless fuming liq. Rapidly hydrol. by H_2O to HBr + CO_2. d^{15} 2.52. Mp −80°. Bp 64-65°.

▷ Toxic, highly irritating.

Schumacher, H.-J. *et al, Ber.*, 1928, **61**, 1671 (*synth*)
Hopper, M.J. *et al, J. Chem. Phys.*, 1968, **48**, 3765 (*ir*)

IC-002319

$CCaN_2$

Calcium cyanamide

Calcium carbimide, INN. Calcium carbodiimide. Cyanamide, calcium salt (1:1), 8CI. Aero cyanamid. Alzodef. CCC. Nitrolime. Nitrogen lime. Lime-nitrogen

[156-62-7]

$Ca(NCN)$

M 80.1

Manuf. from: CaC_2 + N_2 at 1000°. Synth. from CaO + $(H_2NCN)_2$ at 800°; $CaCO_3$ + HCN at 700 - 850°; $CaCl_2$ + NaCN at 600°. Commercially available. Anthelmintic used as fertiliser, herbicide, defoliant, pesticide, in manuf. of iron, cyanamide, cyanoguanidine and melamine. Colourless hexagonal cryst. Moisture sensitive: evolves NH_3 with water vapour. Dec. in H_2O. Mp *ca.* 1340°. Also known as cyanamide, although this name strictly applies to Cyanamide, IC-002509. ΔH_f° −348.3 kJ mol^{-1}, ΔG_f° −303 kJ mol^{-1}.

▷ Mod. toxic, flammable. GS6000000.

Compound with citric acid 2:1: [8013-88-5]. *Dipsan. Abstem. Temposil*
Commercially available. Used in treatment of alcoholism; inhibits aldehyde dehydrogenase.

$CCaO_3$

Calcium carbonate ($CaCO_3$), USAN, BAN

Carbonic acid, calcium salt, 8CI. Limestone. Chalk

[471-34-1]

$CaCO_3$

M 100.0

Crude $CaCO_3$ is obt. by direct processing of mineral ores. Pure $CaCO_3$ prepd. by calcination of crude $CaCO_3$ followed by recombination of CaO and CO_2. Ultrapure $CaCO_3$ prepd. by treatment of aq. solns. of $CaCl_2$ with $[NH_4]_2CO_3$ and aq. NH_3. Commercially available. Road aggregate and building material. Raw material for quick lime (CaO) and slaked lime ($Ca(OH)_2$) production. Also used in manuf. of Portland cement. Used in paper manuf. to add brightness, opacity, ink receptivity and smoothness. Used as filler in cosmetics, rubbers, latex, paints and enamels. Also used in toothpastes and as an antacid. Component of Camalox, Titralac. Dec. on heating with loss of CO_2. Dissolves in acids → corresp. calcium salt. Colourless cryst. Hygroscopic. Prac. insol. H_2O. Mp 1339° (at 1.35 atm).

Mineral-form [14791-73-2]

Aragonite

Trimorphous with calcite and vaterite. Widespread occurrence. Cryst., wide variety of colours conferred by impurities. Often fluorescent. Prac. insol. H_2O (1.5 × 10^{-3} g per 100 cm^3 at 25°). ΔH_f° −1207.1 kJ mol^{-1}; ΔG_f° −1127.8 kJ mol^{-1}; S° 88.7 J K^{-1} mol^{-1}. Transforms to calcite at 520°.

Mineral-form [13397-26-7]

Calcite, Iceland spar

Widespread occurrence: chief constit. of limestones and marbles. Cryst. form extremely varied. Colourless when pure. Impurities give grey, yellow, brown, red, green, blue and black colouration. Often fluorescent and phosphorescent under u.v. Prac. insol. H_2O (1.4 × 10^{-3} g per 100 cm^3 at 25°). ΔH_f° −1206.9 kJ mol^{-1}; ΔG_f° −1128.8 kJ mol^{-1}; S° 92.9 J K^{-1} mol^{-1}

Mineral-form [13701-58-1]

Vaterite

Occurs in hydrogel pseudomorphs at Ballcraigy, N. Ireland and Hatrurim Formation, Israel. Colourless, fibrous cryst.

$CCa_{10}O_{27}P_6$

Calcium carbonate phosphate ($Ca_{10}(CO_3)(PO_4)_6$)

Decacalcium carbonate hexaphosphate

$Ca_{10}(CO_3)(PO_4)_6$

M 1030.6

Composition v. variable, with structural cavities. Apatite hexagonal struct. Synth. from $CaHPO_4$ + $CaCO_3$; Ca acetate aq. + mixed $PO_4^{3\ominus}$-$CO_3^{2\ominus}$; Calcium hydroxide phosphate ($Ca_5(OH)(PO_4)_3$). IC-016091 + CO_2 at 900°; Calcium fluoride phosphate ($Ca_5F(PO_4)_3$). IC-016088 + $CaCO_3$.

Mineral-form [61027-80-3]

Carbonate apatite

Essentially the monohydrate. Apatite struct. type with hexagonal lattice. Found in Turkey and Tashkent, Israel, India and regions of USSR. In urinary calculi.

[CCe]

Cerium carbides

Phases CeC, Ce_2C_3, CeC_2 reported.

Cerium carbide (Ce_2C_3) [12015-43-9]

Cerium sesquicarbide

Isostructural with Pu_2C_3. Silvery solid. Ox. state of C ~ 3.4. Dec. by H_2O affording largely ethyne at r.t; at 200°, mostly ethene but 25% C_3 hydrocarbons.

Cerium carbide (CeC_2) [12012-32-7]
Cerium dicarbide
C_2Ce M 164.1
Possesses CaC_2 struct. Converts low MW alcohols into mols. of higher mass. Treatment with CCl_4 in hot melt, affords ultrahard C. Red cryst. brassy yellow powder. Mp 2250°. $\alpha \rightarrow \beta$ transition at 1090°. Dec. by H_2O, principally to ethyne with ethene, ethane and other hydrocarbons. $\mu_{eff} = 2.19\mu_B$ ($\theta = 61°$); $T_N \sim 30K$.

(Chlorocarbonyl)imidosulfurous difluoride
[53654-97-0]

ClC(O)N=SF_2

M 147.5
Synth. from $[SF_2NCO][AsF_6]$ + NOCl. Not isol. in pure form. Isomerises to (Fluorocarbonyl)imidosulfurous chloride fluoride, IC-002331.

Mews, R.J., *J. Fluorine Chem.*, 1974, **4**, 445 (*synth, ir, F-19 nmr*)

CClF$_2$NOS — IC-002331

(Fluorocarbonyl)imidosulfurous chloride fluoride
[53654-99-2]

FC(O)N=SClF

M 147.5

Formed by isomerisation of (Chlorocarbonyl) imidosulfurous difluoride, IC-002330. Colourless liq., dec. at 25° to $COFNSCl_2$ + $COFNSF_2$. Forms 1:1 adduct with AsF_5.

Mews, R.J., *J. Fluorine Chem.*, 1974, **4**, 445 (*synth, ir, F-19 nmr*)

CClF$_2$NO$_3$S$_2$ — IC-002332

***N,N*-Bis(fluorosulfonyl)carbamoyl chloride, 8Cl**
N-(Chloroformyl)bis(fluorosulfonyl)amine
[7221-14-9]

$(FSO_2)_2$NCOCl

M 243.5
Synth. from Chloroimidodisulfuryl fluoride, IC-016342 + CO at 50°. Colourless liq., readily hydrol. to $HN(SO_2F)_2$. Bp_{31} 42°.

Ruff, J.K., *Inorg. Chem.*, 1966, **5**, 732 (*synth, ir, ms, F-19 nmr*)

CClF$_3$ — IC-002333

Chlorotrifluoromethane, 9Cl
Trifluoromethyl chloride. Fluorocarbon 13. Arcton 13. Freon 13
[75-72-9]

$CClF_3$

M 104.4
Fire extinguishing agent, low-temp. refrigerant, dielectric. Gas. Fp −181°. Bp −81.4°.

▷ Mod. toxic by inhalation. Production controlled by environmental legislation. Dec. to toxic carbonyl halides if strongly heated in air. PA6410000.

CCl_3FSe IC-002359

Dichlorofluoromethaneselenenyl chloride

[62247-74-9]

$FCCl_2SeCl$

M 216.3

Formed from CSe_2 + ClF/Cl_2. Red liq. Bp_{38} 51°.

Haas, A. *et al*, *Z. Anorg. Allg. Chem.*, 1976, **427**, 114 (*synth, ir, ms, F-19 nmr*)

CCl_3F_2N IC-002360

***N,N*-Dichloro(chlorodifluoromethyl)amine**

[28245-34-3]

$ClCF_2NCl_2$

M 170.3

Formed from ClCN + ClF at 20°. Colourless liq., dec. slowly at 20° to Cl_2 + $F_2C{=}NCl$.

Young, D.E. *et al*, *J. Chem. Soc., Chem. Commun.*, 1970, 385 (*synth, ir*)
Zheng, Y.Y. *et al*, *J. Org. Chem.*, 1983, **48**, 4844 (*synth, reactions*)

CCl_3N IC-002361

Chlorocarbonimidic dichloride, 9Cl

Chloroimidocarbonyl chloride, 8Cl. N-Chlorochloroformimidoyl chloride. N-Chloroisocyanide dichloride

[25240-91-9]

$Cl_2C{=}NCl$

M 132.3

Formed from $ClC{\equiv}N$ + Cl_2 at 60°. Colourless liq. Bp 87°. Slowly dec. in air. Strong chlorinating agent; adds to alkenes.

Hagemann, H. *et al*, *Angew. Chem., Int. Ed. Engl.*, 1969, **8**, 606 (*synth, ir*)
Burke, J.M. *et al*, *Spectrochim. Acta, Part A*, 1972, **28**, 1649 (*raman, ir*)

CCsN

Caesium cyanide (CsCN), 8CI IC-002384

[21159-32-0]

CsCN

M 158.9

Adopts CsCl - type struct. Prepd. by addition of HCN mixed with C_2H_4 to CsOH dissolved in EtOH or similar non-aq. solv. Colourless cubic cryst. Hygroscopic. Moisture sensitive. Hydrol. to form either HCN and CsOH (< 50°) or NH_3 and $HCOOCs$ (> 80°). Transforms to a ferroelectrically ordered trigonal phase at −80°. Mp 528°. ΔH_f° −121 kJ mol^{-1}.

▷ Highly toxic.

CCs_2O_3 IC-002385

Caesium carbonate (Cs_2CO_3)

Carbonic acid, dicaesium salt, 8CI

[534-17-8]

Cs_2CO_3

M 325.8

Prepd. by reaction of aq. CsOH with CO_2 at 1250-3000 atm. and 100-110°. Commercially available. Reagent for the synth. of crown ethers and macrocyclic lactones. Dissolution in acids affords the corresp. Cs salts. Deliquescent colourless monoclinic cryst. V. sol. H_2O (261 g per 100 cm^3 at 15°); sol. EtOH (11 g per 100 cm^3 at 19°); sol. Et_2O. ΔH_f° −1119 kJ mol^{-1}. Dec. at 610° with CO_2 loss.

▷ Irritant; corrosive. FK9400000.

$CCuF_3O_3S$ IC-002386

Trifluoromethanesulfonic acid copper(1+) salt, 9CI

Copper(I) triflate. Copper(I) trifluoromethanesulfonate

[42152-44-3]

$CuOSO_2CF_3$

M 212.6

Catalyst for olefin dimerisation, cyclopropanation and carbene addn., for promotion of Grob-type

fragmentations and in Ullmann reactions. Used to separate alkenes (e.g. ethene) from other hydrocarbons and CO. Complexes C_6H_6 and a range of polyenes. Activates C-H bonds in alkynes. Reagent for mild dehydration of alcohols. Air- and moisture-sensitive. Prepd. *in situ*.

CO adduct: [81987-72-8]

$C_7CuF_3O_5S$ M 240.6

Near white microcryst. (v. pale pink). Sol. Et_2O. Stable indefinitely under CO. Limited air stability. Forms adducts with phen., bipy, TMED. Phosphines displace CO. Ir ν_{CO} 2118 cm^{-1}.

Cyclohexene complex (1:1): Cyclohexene copper trifluoromethanesulfonate

$C_7H_{10}CuF_3O_3S$ M 294.7

Possible catalyst in photochemically induced alkene insert. White cryst. Sol. toluene.

U.S. Pat., 3 763 200, (1971); *CA*, **80**, 70278x (*use*)

CCuN IC-002387

Copper cyanide, 9CI

Cuprous cyanide. Cupricin

[544-92-3]

CuCN

M 89.5

Insecticide, fungicide. Catalyses addition of dialkyl(dimethylphenylsilyl)zinclithium to acetylenes. Reagent in prep. of acyl trimethylsilanes from carboxylic acid derivs. Catalyses allylation of zinc esters. White-cream powder, dark-green orthorhombic cryst. or dark-red monoclinic cryst. Sol. NH_3 aq., insol. H_2O, alcohols. Mp 474°.

▷ Poisonous. GL7150000.

$NHEt_2$ complex:

$C_9H_{11}CuN_2$ M 162.7

Colourless cryst. Sol. THF.

NEt_3 complex:

$C_9H_{19}CuN_2$ M 190.7

Colourless cryst. Sol. CH_2Cl_2.

Phen complex: see (*Cyano-C*)(*1,10-phenanthroline-N^1,N^{10}*) *copper, IC-008401*

4-Me-Py complex (2:3):

$C_{20}H_{21}Cu_2N_5$ M 458.5

Colourless cryst. Sol. 4-methylpyridine.

$CEuO_3$ IC-002393

Europium(*II*) carbonate ($EuCO_3$)

[5772-74-7]

$EuCO_3$

M 211.9

Isostructural with KNO_3. Useful source of $Eu^{2\oplus}$ salts on reaction with acid. Lemon-yellow solid. Insol. H_2O. Dec. to $Eu_2O(CO_3)_2$ at 430°, and to Eu_2O_3 at 660°.

Inorg. Synth., 1946, **2**, 71 (*synth*)
Sklyarenko, Yu.S. *et al, CA*, 1973, **79**, 60958 (*synth, thermal dec, struct*)
Sterzel, W. *et al, Z. Anorg. Allg. Chem.*, 1976, **392**, 173 (*ir*)

CFIO IC-002394

Carbonic fluoride iodide, 9CI

Carbonyl fluoride iodide, 8CI. Fluoroiodophosgene

O=CFI

M 173.9

Synth. from IF_5 + CO. Colourless gas, slowly hydrol. by H_2O. Mp −120°. Bp −20.6°. Dec. above −20°.

▷ Presumed toxic.

Brauer, G., *Handbuch Präp. Anorg. Chem.*, 3rd Ed., Ferdinand Enke Verlag, 1975-1981, **1**, 225 (*synth*)

CFN IC-002395

Cyanogen fluoride, 9CI, 8CI

Fluorine cyanide. Fluoroformonitrile

[1495-50-7]

FC≡N ($C_{\infty v}$)

M 45.0

Interatomic distances: F—C 126, C—N 116.5 pm. Synth. by pyrolysis of $(CNF)_3$. Colourless gas, stable at −78°. Mp −82°. Subl. −72°, Bp −46°.

▷ Can polymerise expolsively.

CF_2N_2 IC-002404

Difluorocyanamide

[7127-18-6]

$F_2NC≡N$

M 78.0

Interatomic distances: C≡N 115.8, C—N 138.6, N—F 139.9 pm, angle: NCN 174°. Formed from H_2NCN + F_2/He. Colourless gas.

▷ Highly explosive.

Meyers, M.D. *et al, Inorg. Chem.*, 1966, **5**, 1455 (*synth, F-19 nmr*)
Lee, P.L. *et al, Inorg. Chem.*, 1972, **11**, 1920 (*microwave*)

CF_2O IC-002405

Carbonyl fluoride

Carbonic difluoride, 9CI. Fluophosgene

[353-50-4]

COF_2 (C_{2v})

M 66.0

Synth. from CO and AgF_2 or from CO and F_2. Hygroscopic, colourless gas. Highly reactive C—F bonds. Readily hydrol. to CO_2 and HF. d^{-114} 1.139. Mp −114.0°. Bp −83.1°.

▷ Highly toxic by inhalation, irritant, TLV 15. FG6125000.

Inorg. Synth., 1960, **6**, 155 (*synth*)
Fawcett, F.S. *et al, J. Am. Chem. Soc.*, 1962, **84**, 4275 (*synth*)

Sax, N.I. *et al, Dangerous Properties of Industrial Materials*, 7th Ed., Van Nostrand-Reinhold, 1989, 717.

IC-002406

$CF_2O_3Pb_2$

Lead carbonate fluoride ($Pb_2(CO_3)F_2$)

Dilead difluoride carbonate. [μ-[Carbonato(2−)-O:O′]] difluorodilead, 11CI

[86508-50-1]

$Pb_2F_2(CO_3)$

M 512.4

Struct. comprises endless spiral chains of edge-sharing FPb_4 tetrahedra joined by corner sharing to a 3-D network of $(PbF)_n^{n\oplus}$. The $CO_3^{2\ominus}$ are situated in the tunnels of this network. Orthorhombic cryst.

Aurivillius, B., *Acta Chem. Scand., Ser. A*, 1983, **37**, 159.

IC-002407

CF_2S

Thiocarbonyl fluoride

Carbonothioic difluoride, 11Cl, 9Cl

[420-32-6]

$S{=}CF_2$ (C_{2v})

M 82.0

Interatomic distances: F—C 131.5, C—S 158.9 pm; bond angle: FCF 107.1°. Synth. from Cl_2CS + KF. Gas. Mp −163.5°. Bp −62.6°, Bp −62.1°, Bp −54°. Polymeric form also known.

S-oxide. [63674-05-5]. *Difluoromethylene sulfoxide*

CF_2OS M 98.0

Synth. from $(F_2CS)_2$ + CF_3CO_3H. Dec. at −100° to F_2CO + S.

[25610-08-6]

Downs, A.J., *J. Chem. Soc.*, 1962, 4361 (*synth, ir, nmr, uv*)

CF_3IS

IC-002409

Trifluoromethanesulfenyl iodide, 9Cl

[102127-62-6]

F_3CSI

M 227.9

Orange-yellow solid at −108°.

Minkwitz, R. *et al*, *Z. Anorg. Allg. Chem.*, 1985, **527**, 161 (*synth, F nmr, cmr, ir, raman*)

CF_3LiO_3S

IC-002410

Lithium trifluoromethanesulfinate

Trifluoromethanesulfinic acid, lithium salt, 8Cl. Lithium triflite

[33454-82-9]

$LiOS(O)CF_3$

M 156.0

When mixed with poly(ethylene oxide) forms thin polymer electrolyte films which exhibit high ionic conductivity. Commercially available. Electrolyte component for lithium batteries.

▷ Irritant.

Bennion, D.N. *et al*, *J. Chem. Eng. Data*, 1971, **16**, 368 (*phys props*)

CF_3N

Fluorocarbonimidic difluoride

IC-002411

Fluoroiminodicarbonyl fluoride, 8Cl. Trifluoromethylenimine. Perfluoromethylenimine

[338-66-9]

$F_2C{=}NF$

M 83.0

Gas with odour resembling HCN. Bp −60°.

▷ Explodes on strong heating.

Dybvig, D.H., *Inorg. Chem.*, 1966, **5**, 1795 (*nmr, ir, ms*)
Ginsburg, V.A. *et al*, *J. Gen. Chem. USSR (Engl. Transl.)*, 1967, 1343 (*synth, ir, ms*)

CF_3NO

Difluorocarbamic fluoride, 9Cl

IC-002412

Difluorocarbamoyl fluoride, 8Cl. Difluoraminocarbonyl fluoride

[2368-32-3]

F_2NCOF

M 99.0

Synth. from N_2F_4 + CO + hν. Gas. Colourless glass below −130°. d 1.63 at −78°. Mp −152.2°. Bp −32° (extrap.), −82.4°. Hydrol. immediately by H_2O. Vp 160 mm at −78°. Reduced by HI.

▷ Highly toxic, strong oxid. agent requiring special apparatus for handling.

Ruff, O. *et al*, *Ber.*, 1936, **69**, 598, 684 (*synth*)
Fraser, G.W. *et al*, *Inorg. Chem.*, 1965, **4**, 1497 (*synth, ms, ir, nmr*)
Inorg. Synth., 1970, **12**, 299 (*synth, use, ir*)

CF_3NO

IC-002413

Trifluoronitrosomethane, 8Cl

[334-99-6]

F_3CNO

M 99.0

Industrial intermed. in synth. of nitroso rubbers. Deep-blue gas condensing to a deep-blue liq. and freezing to a purple solid. Mp −196.6°. Bp −84°.

Dimer:

$C_2F_6N_2O_2$ M 198.0

Formed reversibly on uv or vis irradiation. Orange-red. Has struct. $(F_3C)_2N{-}ONO$ (distinction from other nitroso compds.).

Haszeldine, R.N., *J. Chem. Soc.*, 1953, 2075 (*synth*)

CF_3NOS

IC-002414

(Fluorocarbonyl)imidosulfurous difluoride, 9Cl

(Fluoroformyl)imidosulfurous difluoride, 8Cl. N-(Fluoroformyl)iminosulfur difluoride. S,S-Difluoro-N-(fluoroformyl)sulfilimine

[3855-41-2]

$F_2S{=}NCOF$

M 131.0

Primary starting material in S—N—F chemistry. Colourless pungent liq. Mp −95°. Bp 48.8° (54°). Dec. at 190° to COF_2 and NSF, or at 0° in presence of $F^\ominus$.

▷ Highly toxic.

Clifford, A.F. *et al*, *Inorg. Chem.*, 1965, **4**, 571 (*synth, ms, uv, ir, nmr*)
Biermann, U. *et al*, *Chem. Ber.*, 1967, **100**, 3795 (*synth, ms, ir, nmr*)
Inorg. Synth., 1986, **24**, 10 (*synth, ir, F-19 nmr*)

CF_3NO_4

IC-002415

Trifluoromethyl peroxynitrate

Peroxynitric acid, trifluoromethyl ester, 9Cl

[50311-48-3]

F_3COONO_2

M 147.0

Colourless gas. Bp 0.9° (extrap.). Dec. at 127° to COF_2 + NO_2 + O_2.

▷ Explosive.

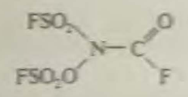
Hohorst, F.A. *et al*, *Inorg. Chem.*, 1974, **13**, 715 (*synth, ir, raman, ms, props*)

$CF_3NO_4S_2$

IC-002416

N-(Fluoroformyl)-*N*,*O*-bis(fluorosulfonyl)hydroxylamine, 8Cl

[19252-48-3]



M 243.1

Synth. from FSO_2NCO + $FOSO_2F$ + hν. Colourless liq., hydrol. in moist air. Bp 121.8°.

Noble, R.E. *et al*, *Inorg. Chem.*, 1968, **7**, 687 (*synth, ir, F-19 nmr, props*)

CF_4

IC-002417

Carbon tetrafluoride

Tetrafluoromethane, 9Cl. Perfluoromethane. Fluorocarbon 14

[75-73-0]

CF_4

M 88.0

Low temp. refrigerant, gaseous insulator. Gas. Spar. sol. H_2O. Mp −183.6°. Bp −128°.

▷ Narcotic in high concs. Reacts violently with Al. Dec. to toxic COF_2 if strongly heated in air. FG4920000

Lebeau, P. *et al*, *Compt. Rend. Hebd. Seances Acad. Sci.*, 1926, **182**, 1340

CF_4N_2O

Tetrafluorourea

IC-002418

[10256-92-5]

$(F_2N)_2C{=}O$

M 132.0

Formed from $F_2NC(O)Cl$ + HgO. Colourless gas. Bp −20°.

▷ Dec. ~80°.

Wright, K.J. *et al*, *Inorg. Chem.*, 1973, **12**, 77 (*synth, ms*)
Gmelin Handbook Inorg. Chem., Syst. No. 14, 1976, D3, 125 (*bibl*)

CF_4O

Trifluoromethyl hypofluorite

IC-002419

Fluoroxytrifluoromethane. Hypofluorous acid trifluoromethyl ester

[373-91-1]

F_3COF

M 104.0

Synth. from CO + F_2. Fluorinating and oxidising agent with synth. applications. Strong oxidising agent. Gas having odour similar to F_2 or OF_2. When liquefied has pale straw colour. Mp < −215°. Bp −95°. Stable to 450°. Hydrol. by aq. NaOH, slowly in H_2O. Above 370° dec. to COF_2 + F_2.

▷ Highly poisonous.

Kellog, K.B. *et al*, *J. Am. Chem. Soc.*, 1948, **70**, 3986 (*synth*)
Holtzmann, R.T. *et al*, *Inorg. Chem.*, 1962, **1**, 972 (*synth*)

CF_4O_2

IC-002420

Hypofluorous acid difluoromethylene ester, 11Cl, 9Cl

Difluoromethanediol dihypofluorite. Bis(fluoroxy) difluoromethane. Difluorodifluoroxymethane

[14230-67-4]

$F_2C(OF)_2$

M 120.0

Formed from CO_2 + F_2 at −78° in presence of CsF; may be prepared in glass or metal containers. Reacts with glass at elevated temps. Electrophilic fluorinating agent. Gas or pale yellow liq. Colourless liq. at −184° to −183°, glassy material (v. viscous) at −196°. d_4^{-42} 1.20. Mp < −184° (glass or syrup at −196°). Bp −62°, Bp −63°. Readily reacts with Hg. Stable at r.t. in glass or perfluorinated metal vessels.

▷ Strong oxidising agent. Potentially haz. with org. or easily oxid. materials.

IC-002427

CF_5NS

(Cyano-*N*)pentafluorosulfur
Pentafluoro(isocyano)sulfur. Sulfur-pentafluoride isocyanide

F_5SNC

M 153.0
Synth. from $F_5SN{=}CBr_2$ and Mg. Colourless gas, isom. to F_5SCN at r.t.

Thrasher, J.S. *et al, Angew. Chem., Int. Ed. Engl.*, 1989, **28**, 1258 (*synth, ir, ms, F-19 nmr*)

IC-002428

CF_5NS

(Cyano-*C*)pentafluorosulfur, 12CI
Sulfur cyanide pentafluoride

[1512-13-6]

F_5SCN

M 153.0

Synth. from $(SCN)_2$ and dil. F_2 at −20°. Colourless stable gas. Bp −25°.

Lösking, O. *et al, Angew. Chem., Int. Ed. Engl.*, 1989, **28**, 1255 (*synth, sp, ir, F-19 nmr*)

IC-002429

CF_5NS

(Trifluoromethyl)imidosulfurous difluoride
Trifluoromethyliminosulfur difluoride

[1512-14-7]

$F_3CN{=}SF_2$

M 153.0
Synth. from SF_4 and BrCN or NaSCN. Gaseous dielectric insulator for electrical devices. Highly reactive colourless gas, dec. by H_2O or EtOH; thermally stable. Bp −6°.

Smith, W.C. *et al, J. Am. Chem. Soc.*, 1960, **82**, 551 (*synth, ms, ir, nmr*)
Griffiths, J.E. *et al, Spectrochim. Acta, Part A*, 1969, **25**, 1355 (*ir*)

Pentafluoro(fluorocarbonyl)sulfur
Pentafluorosulfur carbonyl fluoride
Pentafluoro(fluoroformyl)sulfur, 8CI

[19421-19-3]

$F_5SC(O)F$

M 174.0
Formed from $FC(O)C(O)F + S_2F_{10}$ + hv. Colourless gas, readily hydrol. Bp −10°.

Czerepinski, R. *et al, J. Am. Chem. Soc.*, 1968, **90**, 3954 (*synth, ir, F-19 nmr*)

IC-002432

CF_6O_2S

Pentafluoro(fluoroformato)sulfur, 8CI
Pentafluorosulfur fluoroformate

[16829-25-7]

$F_5SOC(O)F$

M 190.0
Formed from $FC(O)C(O)F + F_5SOF$ + hv. Colourless liq. or gas, stable to glass, slowly hydrol. Mp ~ −78°. Bp ~5°.

Czerepinski, R. *et al, J. Am. Chem. Soc.*, 1968, **90**, 3954 (*synth, ir, F-19 nmr*)

IC-002433

CF_6O_2S

Pentafluorosulfur peroxofluoroformate
Pentafluoro(fluoroperoxyformato)sulfur, 8CI
(Carbonofluoridoperoxoato-O)pentafluorosulfur, 10CI, 9CI

[19421-21-7]

$F_5SOOC(O)F$

M 206.0
Synth. from $F(O)COOC(O)F + F_9SOOSF_5$ + hv. Highly reactive colourless liq. Bp 25°.

Czerepinski, R. *et al, J. Am. Chem. Soc.*, 1968, **90**, 3954 (*synth, ir, F-19 nmr*)
